ASSAY COMMISSION'S ANNUAL TEST OF COIN

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the prior year, by a commission of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 11 and 12, 1925, reported the following results of their examination:

Your committee on counting respectfully reports that the packages containing the pieces reserved from the coinage made during the calendar year 1924 by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes of the United States, were delivered to us by the superintendent of the mint at Philadelphia, and upon comparison with the transcripts kept by the Director of the Mint were found to be correct as to date, number of delivery, number of pieces, and denomination.

The verification of the packages being completed, they were delivered to the committees on weighing and assaying.

The committee on weighing have to report that they have weighed the coins shown in an appended list and have found them to be standard within the legal tolerances. The coins were selected at random from those reserved by the mints at Philadelphia, San Francisco, and Denver.

The coins were directly weighed against a set of sealed coin-weights which were accompanied by a certificate signed by the Director of the Bureau of Standards, Department of Commerce, and which gave the value of the weights in terms of United States standard. The weighings were made on a Troemner balance supplied by the Philadelphia Mint, which was tested by your committee as to the equality of the arms and as to its sensibility, which were entirely satisfactory.

The committee on assaying respectfully reports that it has completed the assays of coin selected from the residues representing all denominations coined by the mints at Philadelphia, San Francisco, and Denver during the year 1924.

The coinage laws provide for variations in the fineness of individual coins of one one-thousandth for gold and three one-thousandths for silver, and as shown by the schedules which follow, the coinage of the three mints has been within the legal limits allowed.

The assay balances and materials used in assaying and examined by the committee were found to be satisfactory; the committee, therefore, considers the assays to be accurate.

Assays of individual gold coins selected

Mint	Highest assay	Lowest assay
	<i>Fineness</i>	<i>Fineness</i>
Philadelphia.....	900.4	899.8
San Francisco.....	900.4	899.9
Denver.....	900.5	899.7

Assays of individual silver coins selected

Mint	Highest assay	Lowest assay

Denver.....	899.8	898.9

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1925, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

Hon. ANDREW W. MELLON,
Secretary of the Treasury.

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1924

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a close estimate of gold mine and the former working backward from gold deposits.

The official estimate made by the Bureau of the Mint represents the material received at mint service offices and private refiners. The difference between the official estimate and the actual production is due to the fact that the official estimate is based on the material received at mint service offices and private refiners, and the actual production is based on the material received at all sources.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1924

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1924

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1924 is estimated to have been \$52,277,000, and the production of silver is estimated at 65,407,186 fine ounces. A comparison of these figures with those for 1923 indicates approximately \$500,000 increase in production of gold and approximately 7.9 million ounces decrease in silver production.

As regards individual States, the only outstanding differences in gold production as compared with the prior year are Colorado's increase of over \$2,000,000 and Arizona's decrease of nearly one and one-half million dollars.

Individual States differences in silver production as compared with the prior year include no material increases and the following material decreases: Utah, 2,700,000 ounces; Colorado, 2,000,000 ounces; Nevada, 1,300,000 ounces; and Arizona, 1,000,000 ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows; further information concerning same can be obtained by those interested by addressing the last-named bureau at Washington.

ALASKA

Alaska mines in 1924 produced gold valued at \$6,285,724, compared with an output of \$5,985,314 in 1923. The value of the silver in 1924 was \$448,659, or \$219,353 less than in 1923.

In 1924 about 43 per cent of the total gold production came from lode mines, compared with 39.7 per cent credited to lode mines in 1923. The auriferous lode mines produced during 1924 gold valued at \$2,705,138 and silver valued at \$49,573.

The copper ores contained \$13,341 in gold and \$383,292 in silver, which was considerably less than in 1923.

The value of the placer gold, \$3,564,000, was \$44,500 less than in 1923.

The silver recovered in placer bullion was 22,279 fine ounces and that from copper-lead ores 1,294 ounces.

The only increase in gold was from the gold lode mines; the output from placers showed a small decrease. The Alaska-Juneau was the largest producing property, and the output from the Chichagof mine was much less than in 1923 and 1922. It is estimated that about 540 placer mines were operated in 1924 and about 521 in 1923, but of these mines many were worked for only part of the season.

Twenty-seven gold dredges were operated in Alaska in 1924, compared with 25 in 1923. The yield from dredges in 1924 was \$1,563,361, compared with \$1,848,596 in 1923. The average recovery per cubic yard in 1924 was 36 cents, while in 1923 it was 40 cents. The total value of gold recovered by dredging in Alaska up to the end of 1924 was \$28,287,162.

ARIZONA

Arizona mines produced gold in 1924 to a value of \$4,878,465, a decrease of \$1,242,656 from that of 1923, according to V. C. Heikes, of the Bureau of Mines. The larger part of the gold, or \$2,486,542, had its source in crude ore smelted. Gold in bullion from ore treated by amalgamation or cyanidation, which decreased decidedly, was valued at \$1,684,436, and gold in concentrates was valued at \$703,403. The gold from deep mines was derived from the following sources: Dry or siliceous ore, \$2,080,208; copper ore, \$2,648,498; lead ore, \$132,450; and copper-lead ore, \$14,170. Gold from siliceous ore was decidedly decreased on account of the closing of the United Eastern mine, which has been the largest single gold producer in Arizona for several years. Nearly 97 per cent of the State's gold came from copper ore and siliceous ore combined. Placers produced only \$3,139 in gold.

The silver output amounted to 6,649,276 ounces, a decrease of 694,466 ounces from the record output of 1923. Though silver from copper ore increased to a marked degree, that from siliceous ore decreased decidedly. The sources of the silver output were: Siliceous ore, 610,213 ounces; copper ore, 5,101,837 ounces; lead ore, 912,741 ounces; copper-lead ore, 24,458 ounces; and placers, 27 ounces.

There were 275 mines producing during the year, of which number only 9 were placer mines.

CALIFORNIA

The gold yield of California mines in 1924, according to James M. Hill, of the United States Bureau of Mines, was 636,139.72 ounces, valued at \$13,150,175, a decrease of 1.71 per cent as compared with 1923. The production from deep mines increased 24.87 per cent, and in 1924 was 414,177.21 ounces, valued at \$8,561,803. Placer production in 1924 was 29.65 per cent less than in 1923 and totaled 221,962.51 ounces, valued at \$4,588,372. Deep mines produced 65 per cent and placer mines 35 per cent of the total gold output in 1924, and of the placer output of gold the dredges accounted for

94 per cent of the yield. Dry gold ore mined in California in 1924 yielded 60.33 per cent, dry silver ore 1.30 per cent, and copper ore 3.32 per cent of the total gold output.

There were 3,555,133 ounces of silver produced in California in 1924, valued at \$2,381,939, a decrease 4,310 ounces in quantity and 18 per cent in value, as compared with 1923. The yield of silver from placer operations was only 0.47 per cent of the total output of the State. Dry silver ores, largely the production of the California Rand Silver (Inc.), carried 64.58 per cent of the total, copper ores carried 24.65 per cent, lead ores carried 5.29 per cent, and dry gold ores 4.38 per cent of the total quantity of silver produced in 1924.

In 1924 there were 267 producing deep mines and 266 producing placer mines, of which 27 were dredges, in California.

COLORADO

The reports from the mines of Colorado, according to Charles W. Henderson, Bureau of Mines, Department of Commerce, show production for the calendar year 1924 of 420,145 fine ounces of gold, valued at \$8,685,168, and 3,375,000 ounces of silver, which, at \$0.67 per ounce, have a gross value of \$2,261,250. These figures show an increase of \$2,093,539 for gold, but a decrease for silver of 1,959,488 ounces in quantity and of \$2,113,030 in value. The gold increase is attributed to increases of \$894,883 in Teller County (Cripple Creek), \$708,672 in Lake County (Leadville), \$321,453 in San Miguel County (Telluride and Ophir), \$193,859 in San Juan County (Silverton and Eureka), and compensating increases and decreases in the other counties.

The silver decrease is attributed to the continued low price for silver since the expiration on July 1, 1923, of the guarantee of \$1 an ounce under the Pittman Act. The counties showing the heaviest decreases were: 673,696 ounces in Ouray County, 508,088 ounces in San Miguel County, 356,119 ounces in Pitkin County, 145,785 ounces in Saguache County, 135,187 ounces in Lake County, 113,059 in Clear Creek County, 111,646 in Eagle County, and 69,220 in Summit County. The counties showing an increase were San Juan, 230,037 ounces; Gunnison, 40,310 ounces; and Mineral, 10,283 ounces.

The four dredges in the State, two at Breckenridge, one at Fairplay, and one at Box Creek, below Malta, produced \$412,080 in gold and 4,873 ounces of silver. Dredges, hydraulic, and sluice mines in the State produced \$418,506 in gold and 4,954 ounces of silver.

CENTRAL STATES

Three Central States reported an output of silver in 1924—Michigan, Missouri, and Illinois. The total production was 242,966 fine ounces, valued at \$162,787, against 409,437 ounces in 1923. All the silver from Michigan was derived from lode-copper mines, and the output, 130,381 ounces, was 93,616 ounces less than in 1923. Less skimmings from lead derived from galena ores mined in southeastern Missouri were refined, and the production of silver from that source decreased from 177,270 fine ounces in 1923 to 103,694 ounces in 1924. No silver was reported in 1924 from Missouri copper ores. From

lead concentrates derived from southern Illinois fluorspar mines 8,891 fine ounces of silver was recovered, an increase of 721 ounces for 1924.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the Eastern or Appalachian States increased from 576.58 fine ounces, valued at \$11,919, in 1923, to 799.88 ounces, valued at \$16,535, in 1924. Tennessee produced \$6,800, North Carolina \$4,540, Pennsylvania \$4,424, Georgia \$655, and Virginia \$116. The production from placer mines was only 9.34 ounces, a decrease of 40 ounces. All the placer output was from small mines in Georgia and North Carolina. The gold recovered from siliceous ores in Georgia, North Carolina, and Virginia amounted to 247.58 ounces, most of which was from the old Coggins mine in Montgomery County, N. C. Tennessee produced 328.95 ounces from copper ores of the Ducktown district, and 214.01 ounces of gold was recovered from pyritiferous magnetite ores in Pennsylvania.

The mine output of silver was 97,628 fine ounces, a decrease of 11,171 ounces from the output of 1923. There were 94,779 ounces obtained from copper ores mined in Tennessee, 2,810 ounces from pyritiferous magnetite ores of Pennsylvania, and 38 ounces from placers and dry and siliceous ores of Georgia, North Carolina, and Virginia.

IDAHO

In 1924, according to C. N. Gerry, of the Bureau of Mines, Idaho's output of gold was valued at \$556,523 and that of silver \$5,221,413. The production of silver was upheld by the steady operations of the producers of silver-lead ore, but the production of gold decreased considerably.

Gold decreased from \$767,427 in 1923 to \$556,523 in 1924, largely the result of curtailed placer operations in Shoshone and Elmore Counties. Of this total the placer gold amounted to \$358,121, against \$498,709 in 1923. The gold won by dredges was valued at \$340,462 a decrease from \$469,900 in 1923. Dry or siliceous ore produced more gold than any other kind of ore, or \$120,071. Gold in copper ore was valued at \$49,767; lead ore, \$21,933; copper-lead ore, \$252; and lead-zinc ore, \$6,376. In 1924, 86 per cent of Idaho's gold came from placers and from siliceous ore.

The silver output was 7,793,154 ounces, an increase of 119,492 ounces. Most of the silver, or 5,815,764 ounces, came from lead ore. Lead-zinc ore supplied 1,278,942 ounces; copper-lead ore, 140,423 ounces; siliceous ore, 47,137 ounces; copper ore, 504,644 ounces; copper-zinc ore, 1,996 ounces; and placers, 4,248 ounces. The Coeur d'Alene region alone produced 6,695,830 ounces of silver.

There were 220 mines producing during the year, of which 79 were placer mines and 141 deep mines.

MONTANA

Montana's mine output of gold in 1924, according to C. N. Gerry, of the Bureau of Mines, was valued at \$2,022,825, an increase of \$264,077. Of this total \$1,995,464 came from deep mines and

\$27,361 from placers. There was a marked decrease from placers, as no dredge operations were carried on in the State. As in former years, the gold was derived principally from siliceous ore, which was the source of \$1,305,927. Gold from other sources was as follows: Copper ore, \$515,269; lead-zinc ore, \$126,592; lead ore, \$30,726; copper-lead ore, \$6,879; and copper-lead-zinc ore, \$10,071.

The silver produced decreased from 13,380,862 ounces in 1923 to 13,289,303 ounces in 1924. Silver from copper ore and lead-zinc ore increased considerably, but that from siliceous ore and zinc ore was much less than in 1923. Copper ore supplied the largest quantity of silver, 7,845,180 ounces; lead-zinc ore, 3,211,443 ounces; siliceous ore, 947,083 ounces; lead ore, 287,041 ounces; copper-lead ore, 573,038 ounces; and copper-lead-zinc ore, 425,331 ounces.

There were 388 producing mines, of which 302 were deep mines and 86 were placer properties.

NEVADA

The gold output of Nevada in 1924, according to V. C. Heikes, of the Bureau of Mines, had a value of \$22,799,799, as compared with \$25,040,349 in 1923. The production of gold from the Tonopah district was \$1,161,993, a slight decrease from that of 1923, but the Comstock district produced \$1,108,743 in gold, a decided increase. Most of the gold, \$3,754,575, came from siliceous ore. Copper ore supplied gold valued at \$668,009; placers, \$27,369; lead ore, \$41,257; lead-zinc ore, \$14,475; and copper-lead ore, \$1.

The production of silver in 1924 was 9,411,379 ounces, a decrease from 10,614,564 ounces in 1923. The mines of the Tonopah district in Nye and Esmeralda Counties produced 5,032,043 ounces, which is more than the production of any other district in the State. Despite the mining of recently opened ore bodies in the western part of the district in Esmeralda County, production was about 3 per cent less than in 1923. Comstock district, Storey County, increased its output to 1,616,692 ounces of silver, largely from the United Comstock mine. Most of the silver of the State, 8,002,859 ounces, had its source in siliceous ore, the greater part of which was cyanided. Silver from lead ore amounted to 1,093,429 ounces; lead-zinc ore, 206,145 ounces; copper-lead ore, 1,786 ounces; copper ore, 106,614 ounces; and placers, 546 ounces.

There were 384 mines producing in Nevada in 1924, of which 36 were placer mines and 348 were deep mines.

NEW MEXICO

According to Charles W. Henderson, Bureau of Mines, the metal mines of New Mexico in 1924 produced 24,803.56 ounces of gold, valued at \$512,735, and 795,069 ounces of silver, valued at \$532,696. The outstanding features affecting gold and silver production were the increase in silver production in Catron County, where, despite the low market price for silver, the Mogollon Mines Co. took over adjacent idle mines and operated both the Last Chance and Fanney mills; the idleness of the Aztec mine, Colfax County, with a consequent decrease of \$50,000 in gold production; the almost complete

idleness of silver mines in Sierra County, and those near Silver City, which had experienced a revival during the guarantee of \$1 an ounce for silver during the Pittman Act purchases in 1920-1923; and the decrease of shipments of siliceous copper-gold-silver ore from Lordsburg. Placer mines produced 176 fine ounces of gold and 27 fine ounces of silver.

OREGON

The gold yield of Oregon mines in 1924, according to James M. Hill, of the United States Bureau of Mines, was 26,695.36 ounces, valued at \$551,842, an increase of \$53,834 as compared with 1923. The gold production from deep mines increased 242.93 ounces to a total of 10,945.32 ounces, valued at \$226,260, in 1924. The placer production of gold in 1924 was 15,750.04 ounces, valued at \$325,582, an increase of 2,361.29 ounces as compared with 1923. Deep mines produced 41 per cent and placer mines 59 per cent of the total gold yield in 1924, and of the placer gold dredges accounted for 90 per cent of the total. Dry gold ores yielded 33 per cent and copper ores 8 per cent of the total gold yield of Oregon in 1924.

There were 38,103 ounces of silver, valued at \$25,529, produced in Oregon in 1924, a decrease of 60 per cent in quantity as compared with 1923. The deep-mine yield was 35,824 ounces, or 94 per cent, and the placer yield 2,279 ounces, or 6 per cent of the total. Dry gold ores gave 48 per cent, dry silver ores 13 per cent, and copper ores 33 per cent of the total silver output.

During 1924 there were 43 deep mines and 71 placer mines producing in Oregon.

SOUTH DAKOTA

According to Charles W. Henderson, Bureau of Mines, Department of Commerce, producing mines of South Dakota in 1924 were the Homestake, at Lead, Lawrence County, the largest gold-producing mine in the United States, and three small gold mines in Pennington County. The reports of these mines show a total production for the year of 295,930.24 fine ounces of gold, with a value of \$6,117,421, and 86,548 ounces of silver, with a commercial value of \$57,987. The Homestake Mining Co.'s annual report for 1924 shows that 1,670,300 tons of ore were milled, with a revenue from the gold-silver bars marketed of \$6,126,349.99, an average of \$3.6678 to the ton.

TEXAS

Only one mine, the Presidio silver mine, at Shafter, was productive in 1924. This mine has produced the greater part of the silver output of Texas, which from 1885 to 1924 amounted to 17,988,043 ounces, having a commercial value of \$13,235,470.

UTAH

The value of the metal output of Utah was \$66,227,637 in 1924, despite a decrease in both gold and silver, according to V. C. Heikes, of the Bureau of Mines. The State made a record output of lead

in 1924, and a greatly increased output of copper, but the metal prices for other than lead were lower than those of 1923.

The gold output was valued at \$3,028,152, a decrease of \$48,331 from that of 1923. Separated as to source, copper ore was most important, containing gold valued at \$1,724,952; siliceous ore supplied \$560,181 in gold; lead ore, \$503,981; lead-zinc ore, \$238,770; and copper-lead ore, \$36. Placer mines produced only \$232 in gold in 1924.

The silver production of Utah decreased from 19,137,470 ounces in 1923, when the mines of the State made a record output, to 17,253,692 ounces in 1924, when the price averaged only 67 cents an ounce. Separated as to source, the silver came principally from lead ore, which supplied 9,936,956 ounces; dry or siliceous ore supplied 4,749,144 ounces; copper ore, 887,541 ounces; lead-zinc ore, 1,679,588 ounces; and copper-lead ore, 462 ounces. The Tintic district, in Juab and Utah Counties, produced 8,254,517 ounces, against 9,231,960 ounces in 1923. The Bingham district of Salt Lake County produced 2,494,698 ounces, and the Park City region, in Summit and Wasatch Counties, 5,613,540 ounces.

There were 138 producing properties in 1924, of which 2 were placer mines.

WASHINGTON

The production of gold, silver, copper, lead, and zinc in Washington in 1924, according to C. N. Gerry, of the Bureau of Mines, had a total value of \$948,490, a decrease of \$117,176 from the production of 1923. Though there was a decrease in gold, silver, and zinc in 1924, the value of the metal-mine output was only slightly less than the average of the last 14 years.

The output of gold had a value of \$309,617, a decrease of \$32,450. Most of the gold of the State, or \$304,003, came from siliceous ore; copper ore supplied only \$2,433 in gold; lead ore, \$2,483; and placers, \$698. Since 1860 Washington has produced \$29,094,207 in gold.

The output of silver in 1924 was 213,742 ounces, a decrease of 13,442 ounces. Of the total silver, 70,178 ounces had its source in siliceous ore, 44,173 ounces in copper ore, 99,300 ounces in lead ore, and 79 ounces in zinc ore.

There were 4 placers and 30 deep producing mines.

WYOMING

There were no producing metal mines in Wyoming in 1924.

Refinery production of gold mined in the several States and Territories in 1923 and 1924, with the increase and decrease in each for the latter year

State or Territory	Production			Increase 1924 (value)	Decrease 1924 (value)
	1924		1923 (value)

¹ Includes small quantity of silver from placer mines.

² Includes silver in lead, silver-lead, lead-zinc, copper-lead, copper-lead-zinc, and zinc ores.

³ Philippine Islands excluded.

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792

The refinery production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint]

Calendar years	Gold		Silver

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES
DURING THE CALENDAR YEAR 1924

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1924, with the classes of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended December 31, 1924

Material	Issued by—	Gold	Silver
		Dollars	Fine ozs.
Bullion.....	Mints and assay offices.....	60,512,008	1,224,829
Bullion in various forms.....	Private refineries.....	1,875,843	32,292,643
United States coin ¹	Banks, etc.....	3,500,000	77,344
Total.....		65,887,851	33,594,816
Old jewelry, plate, scrap, etc., contained in private refinery returns, and that returned to monetary use.....		27,974,541	8,930,580
New material.....		37,913,310	24,664,236

¹ Estimated; the quantity of silver is equivalent to 100,000 silver dollars.

Gold furnished for use in manufactures and the arts, and classification of the materials used, by calendar years, since 1880

LOSSES AND GAINS ON WITHDRAWN COIN

The loss on face value of gold coin totaling \$1,828,241.50 withdrawn from circulation during the fiscal year 1925 was \$15,843.54, of which \$2,924.86 was reimbursable from the appropriation provided for that purpose. The loss on face value of silver coin totaling \$2,650,725.94 withdrawn from circulation was \$211,847.53, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling \$187,434.39 withdrawn during the fiscal year was \$9,985.11.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin, since 1883

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal reserve banks. Does not include silver bullion (a potential monetary asset) to the value of \$16,484,237, nor nickel and bronze coin, the value of which depends almost exclusively on the Government impression rather than intrinsic metallic value or a specific reserve.

² Includes money held by the Cuban agencies of the Federal reserve banks of Boston and Atlanta.

³ Population of continental United States (estimated) June 30, 1925, 114,104,000; June 30, 1924, 112,686,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin outside of the vaults of the Treasury. Federal reserve banks, and Federal reserve agents.

⁵ These amounts are not included in the total, since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes \$20,778,312 of notes in process of redemption, \$160,367,334 of gold deposited for redemption of Federal reserve notes, \$7,442,555 deposited for redemption of national-bank notes, \$4,740 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,040,640 deposited as a reserve against postal savings deposits.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$153,620,986 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer against Federal reserve bank notes. National-bank notes are secured by United States bonds, except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national-bank notes secured by Government bonds.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

Cash holdings of national banks

Reports to the Comptroller of the Currency of cash holdings on June 30, 1925, of the national banks (8,072) give:

Gold coin.....	\$18,857,000
Standard silver dollars.....	7,919,000
Subsidiary silver and minor coin.....	29,640,000
Gold certificates.....	52,904,000
Silver certificates.....	28,666,000
United States notes.....	25,501,000
National-bank notes.....	67,609,000
Federal reserve and Federal reserve bank notes.....	128,484,000
Clearing-house certificates.....	25,000
Total.....	359,605,000

Cash holdings of nonnational banks

Reports to the Comptroller of the Currency of 21,263 reporting banks, other than national banks, as of June 30, 1924, show cash holdings as follows:

Gold coin.....	\$25,861,000
Silver coin.....	15,809,000

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.) For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

THE COURSE OF GOLD AND SILVER

The following review of the London market during the calendar year 1924 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

SILVER

The year under review has presented several interesting features, and also important differences when compared with 1923. It was more or less generally felt that, when the purchases of silver in accordance with the provisions of the Pittman Act in America came to an end, thereby releasing the entire production of domestic silver in that country, unless an increased consumption on behalf of the East took place, there would be a tendency for the price of silver to fall to a lower level. Great concern was expressed upon this point by the association of silver producers in America, who advocated that every endeavor should be made to popularize the use of silver both for general trade and also coinage purposes.

From the fact that the average price for 1924 stands at 2d. higher than that for the previous year, it will be seen that the increase in the supply of silver available for ordinary use, due to the cessation of purchases referred to, has not produced any depreciation in the price of silver up to the present, in spite of an actual reduction in the requirements of the East.

The chief reason for this is to be found in the determined effort on the part of European governments to assist the general restoration by reestablishing their subsidiary coinage on a metallic basis and to replace their note issue to a large extent by silver. Russia, Germany, Poland, and Austria have been the principal purchasers of silver for this purpose, and, in addition to orders executed in New York, an amount of approximately 60,000,000 ounces has been bought in the London market, part of which, however, will not be actually delivered until the early part of 1925. This represents about 10,000,000 ounces in excess of the silver secured under the Pittman Act during the whole of 1923.

The substitution of silver coins for notes presents a certain difficulty, owing to the natural tendency to hoard a currency possessing an intrinsic value, so that some considerable time must elapse before any special benefit becomes apparent from the change of policy. It is equally clear that, having once embarked upon the issue of subsidiary silver coins, the purchasing of the metal must continue until the tendency to hoard decreases and enables sufficient coins to remain in circulation. This difficulty was disastrously experienced by Austria in the case of the issue of new silver coins of 800 fineness, but the tendency to hoard should be even more pronounced in Russia, with its many millions of peasants, as in this case the fineness of the old silver currency of 900 has been maintained in the new issue. Germany and Poland, on the other hand, have debased their coinage to the same level as our own, namely, 500 fineness, thereby reducing the tendency for these coins to disappear from circulation almost as soon as they are issued.

Owing to the comparatively long periods during which there was no eastern buying in America, a very much larger amount of silver has had to be sold on the London market from that quarter than in 1923, when there was a more or less continuous demand from India, and China was also a greater consumer. As a result, the London market has been much more sensitive to fluctuations in the New York exchange. The continuous depression in trade generally in China has caused dealers to attach considerable importance to movements in the dollar rate, and the Indian bazaar dealers have been greatly influenced by these fluctuations in their speculative dealings here.

Another point worthy of notice is that, owing to the extremely poor eastern demand for silver in London, and to the fact that the purchases on continental coinage account have almost invariably been made for forward and not for immediate delivery, stocks of silver in London have been unusually heavy, and in consequence for rather more than half the year the cash quotation has ruled either at a discount on or the same rate as that for forward. This has been especially pronounced during the last half of the year.

With the exception of the heavy fall which took place in December, the range of fluctuations in price during the past year has not been excessive, the difference between the highest and lowest quotations being $3\frac{1}{4}$ d. from January to the end of November. There have also been long periods when only quite unimportant movements in price took place. Throughout January, February, March, and April rates ruled between approximately 33d. and 34d., rising to $35\frac{1}{8}$ d. during May and remaining between that figure and 34d. during the following four months. In the first half of October the price improved somewhat sharply to $36\frac{1}{8}$ d., the highest quotation of the year, but dropped away more or less steadily during the remaining months.

The year opened with the price at $33\frac{1}{2}$ d. and with a continuation of the Indian demand for shipment at the end of January, which had been in existence during most of November and December of 1923, and which was largely prompted by the usual rumor of the possibility of an import duty being levied in the Indian budget on silver being imported into that country, rates improved to $34\frac{1}{8}$ d., with a premium on cash silver of as much as $\frac{7}{8}$ d. During this time large amounts of silver were also being purchased in New York for direct shipment to Bombay. The higher level caused a slackening off in demand, and with China inclined to sell rates dropped back again to $32\frac{1}{8}$ d. on the 11th of January. There was also a disposition on the part of India to take advantage of the large premium on cash silver to resell part of the silver already purchased and replace by purchases two months forward, with the inevitable result that the difference between the two quotations became very much reduced. The lower level reached, assisted by an improvement in the rupee exchange, caused a renewal of buying on the part of India, and with the fall in the dollar rate to about 420 curtailing supplies from America, prices improved to $33\frac{7}{8}$ d. After a slight reaction, due chiefly to the lack of animation on the part of China owing to the new year holidays, buying orders were received from that quarter for forward delivery and a recovery took

place to $34\frac{1}{16}$ d. on the 13th of February, the forward quotation being $33\frac{1}{16}$ d., the highest since 25th October, 1922. The Indian demand for shipment having now ceased and the buying being confined chiefly to delivery in two months, the premium on cash silver, which had been gradually decreasing, disappeared entirely when even rates were quoted on 9th February. China then came into the market as a seller owing to easier exchange rates, producing a setback in the price to $33\frac{1}{16}$ d., which remained at about this level until the end of March.

During this period the market continued extremely quiet and featureless, the weakness in the rupee rate, together with the tightness of money in Bombay, preventing any demand from that quarter. During the early part of March it was announced that the German Government had decided that silver coinage up to the amount of 5 marks per head of the population should be issued to augment the currency. The effect upon the silver market of this, however, was largely discounted by the statement that the Reichbank already possessed sufficient silver for the purpose and would not be compelled to make any actual purchases of silver for the moment. This was followed almost immediately by the commencement of the purchase of silver on a large scale by the Russian Government, both for minting in this country and later for shipment to the Lenin-grad mint. Owing to the poor eastern demand, the silver required for coinage was easily secured during April without producing any effect upon prices here. Then, however, China came into the market as a buyer, and with this competition prices improved during May to $35\frac{1}{8}$ d. An additional strength was imparted to the market by the announcement, toward the end of the month, that the United States Treasury would probably be empowered to buy 14,589,730 ounces of silver at \$1 per ounce to complete the purchases under the Pittman Act. Although passed by the Senate, this purchasing does not appear to have been ratified by Congress, so that up to the time of writing nothing has been done in the matter.

During June and July the demand for silver was almost entirely confined to coinage orders for forward delivery, India remaining inactive. China was a more or less consistent seller, so that no appreciable effect was produced in the market by this important buying, prices remaining at about the level of $34\frac{1}{2}$ d. New York was also selling fairly freely at this time for prompt shipment, and stocks in London began to increase, with the result that the cash quotation was quoted at a discount on the 27th of June, the first occasion for about two years.

At the commencement of August the China selling became more pronounced, and the sharp movements in the New York exchange rate producing a generally unsettled condition, the price was forced back temporarily to $33\frac{5}{8}$ d. A recovery took place almost immediately, the outbreak of civil war in China and the consequent restrictions to trade causing operators to begin to cover up their oversold position. The Indian bazaars were also inclined to reduce their forward commitments in view of the satisfactory news regarding the progress of the rates, a gradual improvement in price took place during September and the early part of October until $36\frac{1}{16}$ d., the highest quotation of the year, was reached on the 9th of October. During this period large amounts of silver were shipped from London to Bombay with the option of China. Some important consignments of demonetized coins began to arrive during September for realization, chiefly from Portugal, and this source of supply continued throughout the remainder of the year.

The China position having been liquidated, no further buying took place for that quarter, and fresh forward sales were induced by the higher level in price reached. Stocks of silver in Bombay had become extremely heavy by the recent shipments from both London and New York, and attempts were made to ease the position by reselling silver in Bombay for reshipment to London. The gradual improvement in the New York exchange rate, together with the inability on the part of either India or China to buy, caused America to become a free seller in this market, and, although the continental demand continued, prices steadily gave way owing to lack of competition during the remainder of October and throughout most of November, when a temporary steadiness was produced by a sudden demand from India for silver to arrive in Bombay in time for the December settlement.

The continental demand, which had continued until the middle of November, now ceased, and with China a persistent seller and only a moderate demand from India, prices continued their downward course until $31\frac{1}{2}$ d., the lowest price of the year, was reached on the 29th of December.

The closing prices of the year are 31½d. and 31¾d. per ounce standard for ready and forward, respectively, and the average cash price for the year is 34d. per ounce standard.

The December returns not being available yet, it is only possible to give the details of the exports and imports of silver for the 11 months up to the end of November, and for the purposes of this report the figures mentioned should be taken as approximate.

Owing to the cheaper freight from America to Bombay by direct steamers, as compared with London to Bombay, which has been ruling throughout most of the year, the Indian bazaar purchases have been largely executed in New York, with the result that the amount of silver shipped from that quarter to India shows a considerable increase over the previous year, whereas there is a substantial decrease in the exports from London.

The shipments to China show a reduction of 10,000,000 ounces from London and 20,000,000 ounces from San Francisco. This is due to the persistently poor trade conditions in China and the consequently large increase in stocks in Shanghai throughout the year.

The total exports of refined silver to all countries up to the end of November have amounted to 59,000,000 ounces, or 16,000,000 ounces less than 1923. Imports of refined silver, on the other hand, show a return for the corresponding period of 63,000,000 ounces as against 32,000,000 ounces in the previous year, but there is a decrease of 6,500,000 ounces in the amount of unrefined silver received, including coin not of legal tender in the United Kingdom. As approximately 5,000,000 ounces of unrefined silver were received from Russia merely for refining purposes, the resulting fine silver being returned for the manufacture of coins, the quantity received for sale in the London market is considerably less than is actually shown by the returns.

Approximately 11,000,000 ounces of silver imported into London have been manufactured into coins for Russia at the mint and exported to that country.

Owing to the purchases for continental coinage which have been executed in the London market, the amount of silver imported from America has shown a considerable increase, rather more than twice the amount having been received from that quarter.

The amount of refined silver imported from the Transvaal shows an important reduction as compared with last year, due to the silver produced by the Rand refiners having been largely shipped to Bombay direct. There is again an increase in the amount of silver received from Canada, but less refined silver has been received from continental sources, and the sale of surplus silver by the English mint, as the result of debasing our coinage to 500 fine, which produced an important contribution toward the supplies of the metal in 1923, have ceased.

With no immediate prospect of any revival in trade in China, the future of the market will largely depend upon a resumption of buying by the continental governments for coinage. Although these purchases have temporarily ceased, it seems fair to suppose that further amounts of silver will be required in the new year in order to keep the various currencies on a working basis.

GOLD

Dealings in gold have continued throughout the year in very much the same manner as in 1923. The price has continued to be regulated by the various movements in the American exchange, but the relationship of the London quotation to the parity rate has varied in accordance with the supply and demand. Prices have fluctuated between 98s., quoted on the 21st of January, and 88s., quoted on the 30th of December.

Whereas last year the principal Indian demand took place during the first six months, it was not until the end of July of the present year that India entered the market as an important purchaser. During the first seven months most of the South and West African gold went to New York, but since then no commercial shipments have been made, the Indian bazaars absorbing all the available supplies, and even buying gold in New York for shipment to Bombay.

Owing to the various advantages to the buyer by shipping direct from Durban to India, the greater part of the Indian demand has been secured in this way, the London market being confined to the purchase of gold for conversion into sovereigns and also for manufacture into 10-ounce bars. £15,250,000 sterling has been shipped from Durban to Bombay direct.

The heavy purchases which have taken place of this gold have very much reduced the imports into London, so that frequently the weekly arrivals have been

quite insufficient to meet the demand, which has enabled the sellers to secure a considerable premium over the parity rate.

The demand from India for sovereigns has been especially large during the latter part of the year, and on occasions Durban gold has actually been diverted to London via Capetown for conversion into sovereigns upon arrival, the buyers being quite willing to pay the additional expense of freight, etc.

Approximately £9,000,000 sterling less of refined gold has been received from Africa, but the amounts of unrefined gold imported from Rhodesia, the Transvaal, and West Africa show little change as compared with last year. The exports of refined gold from London have amounted to £40,000,000 sterling, showing a decrease of £7,500,000, and although the returns show approximately the same amount of gold has been shipped to America during the year, these figures include transactions on Government account.

Sovereigns to the extent of £1,300,000 have been exported to Egypt.

1726	15.15	1766	14.80	1806	15.52	1846	15.90	1886	20.78		

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, and since from daily London quotations.

RATIO OF SILVER TO GOLD, AS AFFECTED BY WORLD WAR

During the period December, 1916, to June, 1920, it is probable that the world's basic silver price was that of New York rather than that of London. The normal relationship between the two prices—New York a fraction of a cent below the London quotation with exchange considered—did not prevail during this period, when the average monthly New York price varied between approximately 3 cents above and 6 cents below the London price. This period appears to have been initiated by enormous coinages to meet war-time needs, and large silver shipments from the United States to the Orient. Its close was coincident with the removal of the product of United States mines from the world market, purchases under the Pittman Act of April 23, 1918, having begun in June, 1920.

The ratio of silver to gold, based on the New York price, was for this period: Calendar year 1917, 24.85; 1918, 21; 1919, 18.44; 1920, 20.27.

With the partial release during the first half of 1919 of British governmental control of gold export, the London price of exportable gold advanced above its monetary par. The ratio of silver to this gold, based on the average London price of both metals, follows:

1919, 17.53; 1920, 20.41; 1921, 32.34; 1922, 30.11; 1923, 31.35; 1924, 30.62.

Final release of British governmental control of gold export became effective April 28, 1925, when the Chancellor of the Exchequer of Great Britain announced that the restrictions authorized by the gold and silver (export control) act of 1920 on export of gold would be discontinued from that date. This had the effect of restoring the gold standard to the United Kingdom. The example of Great Britain was followed by Australia, New Zealand, Netherlands, and the Dutch East Indies, and on June 1 by South Africa. On April 29, 1925, the London quotation on gold dropped more than 1 shilling to 84s. 11d. per fine ounce, as compared with 84s. 11.45d., mint par. The quotation has since fluctuated between 84s. 10½d. and 84s. 11½d.

Bullion value of the silver dollar [371¼ grains of pure silver] at the annual average price of silver each calendar year since 1837

VALUES OF FOREIGN COINS, OCTOBER 1, 1925

In pursuance of the provisions of section 25 of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, and reenacted by section 522, Title IV, act of September 21, 1922, I hereby proclaim the following estimate by the Director of the Mint of the values of pure metal contents of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1925, expressed in any such metallic currencies; provided, however, that if no such value has been proclaimed, or if the value so proclaimed varies by 5 per centum or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined by the Federal Reserve Bank of New York and published by me as certified by said bank pursuant to the provisions of said section 25 as amended.

A. W. MELLON,
Secretary of the Treasury.

MONETARY LEGISLATION

[PUBLIC RESOLUTION—No. 43—68TH CONGRESS]

[H. J. Res. 259]

JOINT RESOLUTION Establishing a commission for the participation of the United States in the observance of the one hundred and fiftieth anniversary of the Battle of Lexington and Concord, authorizing an appropriation to be utilized in connection with such observance, and for other purposes

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established a commission to be known as the United States Lexington-Concord Sesquicentennial Commission (hereinafter referred to as the commission) and to be composed of eleven commissioners, as follows: Three persons to be appointed by the President of the United States, four Senators by the President of the Senate, and four Members of the House of Representatives by the Speaker of the House of Representatives. The commission shall serve without compensation and shall select a chairman from among their number.

SEC. 2. That there is hereby authorized to be appropriated out of any money in the Treasury not otherwise appropriated the sum of \$5,000 to be expended by the commission for actual and necessary traveling expenses and subsistence while discharging its official duties outside the District of Columbia.

SEC. 3. That there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of \$10,000 to be utilized in the discretion of the commission for the appropriate participation on the part of the United States in the celebration and observance of the one hundred and fiftieth anniversary of the Battle of Lexington and Concord to be commemorated on or about April 19 and 20, 1925.

SEC. 4. That the Postmaster General is hereby authorized and directed to issue a special series of postage stamps, in such denominations and of such designs as he may determine, commemorative of the one hundred and fiftieth anniversary of the Battle of Lexington and Concord and of the one hundred and fiftieth anniversary of such other major events of the Revolutionary War as he may deem appropriate.

SEC. 5. That in commemoration of the one hundred and fiftieth anniversary of the Battle of Lexington and Concord there shall be coined at the mints of the United States silver 50-cent pieces to the number of three hundred thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 6. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material, and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, January 14, 1925.

[PUBLIC—No. 452—68TH CONGRESS]

[S. 3895]

AN ACT To authorize the coinage of silver 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the Battle of Bennington and the independence of Vermont, in commemoration of the seventy-fifth anniversary of the admission of California into the Union and in commemoration of the one hundredth anniversary of the founding of Fort Vancouver, State of Washington

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in commemoration of the one hundred and fiftieth anniversary of the Battle of Bennington and the independence of Vermont there shall be coined in the mints of the United States silver 50-cent pieces to the number of forty thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the

Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That in commemoration of the seventy-fifth anniversary of the admission of the State of California into the Union there shall be coined at the mints of the United States silver 50-cent pieces to the number of not more than three hundred thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

The coins herein authorized by section 2 hereof shall be issued only upon the request of the San Francisco Clearing House Association and the Los Angeles Clearing House Association, or either of them, and upon payment by such associations, or either of them, to the United States of the par value of such coins.

SEC. 3. That in commemoration of the one hundredth anniversary of the founding of Fort Vancouver by the Hudson Bay Company, State of Washington, there shall be coined at the mints of the United States silver 50-cent pieces to the number of not more than three hundred thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

That the coin herein authorized shall be issued only upon the request of the executive committee of the Fort Vancouver Centennial Corporation, of Vancouver, Washington, and upon payment by such executive committee for and on behalf of the Fort Vancouver Centennial Corporation of the par value of such coins, and it shall be permissible for the said Fort Vancouver Centennial Corporation to obtain said coins upon said payment, all at one time or at separate times, and in separate amounts, as it may determine.

SEC. 4. All laws now in force relating to the subsidiary gold and silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material and for the transportation, distribution, and redemption of coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, February 24, 1925.

[PUBLIC—No. 524—68TH CONGRESS]

[S. 4230]

AN ACT To authorize the Secretary of the Treasury to prepare a medal with appropriate emblems and inscriptions commemorative of the Norse-American Centennial

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a medal, not to exceed in number forty thousand, with appropriate devices, emblems, and inscriptions commemorative of the arrival in the United States of the first shipload of Norse immigrants on board the sloop Restaurationen, which event is to be celebrated at the Norse-American Centennial on the Minnesota State Fair Grounds June 6 to 9, 1925, inclusive, shall be prepared under the direction of the Secretary of the Treasury at the United States Mint at Philadelphia. The medals herein authorized shall be manufactured, subject to the provisions of section 52 of the Coinage Act of 1873, from suitable models to be supplied by the Norse-American Centennial (Incorporated). The medals so prepared shall be delivered at the Philadelphia Mint to a designated agent of said Norse-American Centennial (Incorporated) upon payment of the cost thereof.

Approved, March 2, 1925.

[PUBLIC RESOLUTION—No. 62—68TH CONGRESS]

[S. J. Res. 187]

JOINT RESOLUTION Providing for the cooperation of the United States in the sesquicentennial exhibition commemorating the signing of the Declaration of Independence, and for other purposes

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established a commission, to be known as the National Sesquicentennial Exhibition Commission and to be composed of the Secretary of State and the Secretary of Commerce, to represent the United States in connection with the holding of an international exhibition in the city of Philadelphia, Pennsylvania, in 1926, in celebration of the one hundred and fiftieth anniversary of the signing of the Declaration of Independence. There is also established a commission to be known as the National Advisory Commission to the Sesquicentennial Exhibition Association and to be composed of two citizens from each of the several States, Alaska, Hawaii, the Philippine Islands, Porto Rico, the Canal Zone, and the Virgin Islands, to be appointed by the President, which commission is authorized to confer with and advise the officers and directors of the Sesquicentennial Exhibition Association under whose auspices the exhibition is to be held. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of not to exceed \$25,000, to defray such expenses of the commissions herein established as shall be approved by the National Sesquicentennial Exhibition Commission.

SEC. 2. All articles that shall be imported from foreign countries for the sole purpose of display at such exhibition upon which there shall be a tariff or customs duty shall be admitted free of the payment of duty, customs fees, or charges, under such regulations as the Secretary of the Treasury shall prescribe; but it shall be lawful at any time during the exhibition to sell any goods or property imported for and actually on exhibition, subject to such regulations for the security of the revenue and for the collection of import duties as the Secretary of the Treasury may prescribe: *Provided*, That all such articles when sold or withdrawn for consumption or use in the United States shall be subject to the duty, if any, imposed upon such articles by the revenue laws in force at the date of withdrawal; and on such articles which shall have suffered diminution or deterioration from incidental handling and exposure, the duty, if payable, shall be assessed according to the appraised value at the time of sale or withdrawal, and the penalties prescribed by law shall be enforced against any person guilty of any illegal sale, use, or withdrawal.

SEC. 3. The heads of the various executive departments and independent establishments of the Government are authorized to collect and prepare and lend, upon request, to the Sesquicentennial Exhibition Association articles, specimens, and exhibits which, in their judgment, it may be in the interests of the United States to exhibit at such exhibition.

SEC. 4. (a) In commemoration of the one hundred and fiftieth anniversary of the signing of the Declaration of Independence there shall be coined at the mints of the United States gold \$2.50 pieces to the number of not more than two hundred thousand and silver 50-cent pieces to the number of not more than one million, such coins to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, and such coins shall be legal tender in any payment to the amount of their face value.

(b) All laws now in force relating to the gold coins and subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material, and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coins, or for any other purposes, whether such laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparation for this coinage.

(c) The coins authorized by this section shall be issued only to the authorized officers of the Sesquicentennial Exhibition Association, and in such numbers and at such times as they shall request, upon payment by such officers, for and on behalf of such association, of the par value of such coins.

Approved, March 3, 1925.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1923 and tables for 1924, subject to revision, are printed at the end of this volume. Detailed data, arranged by continents and countries, follow herewith; they form the basis of the tables.

LAWS AFFECTING THE CURRENCY

In May, 1925, an ordinance was passed giving a permanent power to the Governor of Trinidad and Tobago to reduce the coin portion of the note guaranty fund from one-half to one-third. This was originally provided for in 1920 for a limited period of three years, and again in 1923 was extended for another period of three years. This reserve against Government notes is held in silver.

¹ Held as a guarantee for the note issue of the Government bank (Banco Internacional).

² Conversion rate, 4 colones=\$1.

PAPER CURRENCY AND BANKS OF ISSUE

From 1914 to 1923 the Banco Internacional was the only bank of issue. The bills of the Banco Comercial were emitted before 1914. When that institution failed the Costa Rican Government assumed liability for the issue and ordered that these bills as they came to the clearing houses be presented to the Banco Internacional for exchange for bills of that bank. The issue is being gradually redeemed by bills of the Banco Internacional. In 1923 the law establishing the Caja de Conversion (exchange bureau) was adopted and that institution is now the only bank of issue. Bills of the Caja de Conversion are sold at the rate of 4 colones to \$1 and the proceeds are deposited in full in a New York bank for the purpose of redeeming the issue as the bills are presented. This issue is therefore guaranteed 100 per cent. They are used largely for the purchase of foreign exchange and do not circulate freely, because there is a tendency to hoard the issue.

THE CONVERSION OFFICE

Decree No. 17, of October 10, 1922

The Constitutional Congress of the Republic of Costa Rica decrees:

ARTICLE 1. There shall be established a division in the International Bank of Costa Rica under the name of conversion office.

ART. 2. The operations of the conversion office will be managed by the directors of the bank in accordance with the regulations issued to that effect and submitted for approval to the secretary of the treasury.

ART. 3. The conversion office will exchange the notes issued by it, upon presentation, for gold or sight drafts on New York, at the option of its administrator, at the ratio of 4 colones to \$1.

ART. 4. The conversion office may buy drafts on foreign countries at the same ratio as above indicated, giving in exchange its own notes.

ART. 5. It may likewise extend against its notes, drafts on the United States of America, always at the said ratio of 4 colones to \$1.

ART. 6. For the purchase and sale of drafts, provided for in the previous articles, the conversion office will collect a premium sufficient to cover the expense.

ART. 7. The gold money received by the office upon exchanging its notes as well as the fund arising in the United States through a like medium can not be issued for any other object than that of satisfying the demand for coin or drafts in exchange for the notes of the conversion office.

ART. 8. The conversion office will be supplied with funds from now on from the taxes on the export of bananas and on any other commodities designated by the Government for this purpose.

ART. 9. The funds referred to in the previous article will be placed in the conversion office in the form of gold coin and sight drafts on New York. Against

this value the conversion office will issue gold notes at the ratio of 400 per cent, which the bank will take as security for the credits held by it against the Government. The bank will withdraw from circulation an equal amount of its present notes when putting into circulation those received from the conversion office.

The legal regulations on banks of issue will be applicable to the conversion office in so far as they are not contrary to the present law.

ART. 10. The notes of the conversion office shall be accepted by all public bureaus at their full value and at par with the notes of the International Bank of Costa Rica.

ART. 11. The public bureaus shall accept American gold—United States money—brought by private individuals in payment of taxes, duties, etc., at the aforementioned rate.

ART. 12. After the promulgation of this law and during the period of conversion neither the Government nor the International Bank nor any other institution shall issue inconvertible notes. The conversion office may issue its own notes in amounts demanded by the public or the Government, but always by delivery of gold or drafts upon New York at the fixed ratio, and always on condition of being paid in gold or sight drafts at the option of the administrator of the conversion office and at the same ratio. The International Bank may issue, but only for the purpose of replacing (un-)used notes of its own issue.

ART. 13. The import duty established heretofore in gold colones will cease being computed in said money and will be computed in notes in circulation, but at a double value of the corresponding assessment. In the same way will be computed any other taxes established in gold colones.

ART. 14. The notes delivered by the conversion office to the International Bank of Costa Rica (article 9) will be placed at the disposal of the persons who import merchandise, without making any differences, on condition that the applicant presents the commercial bill whose amount he wishes to collect, accompanied by the bill of lading to a qualified port of the Republic, and always provided that the bill does not cover articles of luxury.

To this class belong wines, liquors, perfumes, silks, fine leather, automobiles, tobacco, and objects of art, and all those merchandises included by the executive in his regulations on the present law. Preference in the acquisition of the notes of the conversion office will be given to the treasury department whenever needed for national loans, payable in gold on condition that the notes are not acquired on credit. The International Bank of Costa Rica, when disposing of the notes of the conversion office, will maintain the parity between the same and its own notes.

ART. 15. The notes of the conversion office received by the bank in payment of the Government's obligations, as provided for by article 9, shall not be placed in circulation until the values referred to in article 8 have reached a minimum total of \$1,500,000.

ART. 16. The conversion office shall open a special account for the notes, and the gold and drafts representing the same, and shall publish every month in a special and clear statement the status of the issues and of the gold deposits held at home or abroad and the drafts to be collected or paid. The payment of the personnel of the conversion office and of any other expenses required by its functioning will be in charge of the International Bank of Costa Rica.

The Government guarantees the operations of the conversion office.

While this law is in force gold coin will be exported freely.

ART. 17. If at any time for any reason the issue of the circulating notes of the conversion office should cease being duly covered as provided for by this law, or if the drafts bought by the conversion office should be uncollectible or should become worthless before the date of maturity, or if the foreign correspondents with whom are deposited the funds of the conversion office should suspend payment, the International Bank of Costa Rica shall proceed without any waste of time and with its own funds to reestablish the equilibrium required by this law between note issue and drafts coming from the conversion office on one hand and the commercial capital and amounts, both real and effective, on the other hand.

All the amounts in gold in the possession of the International Bank of Costa Rica are understood to belong to the conversion office up to the amount of the issue account.

ART. 18. The International Bank, is authorized to place its gold reserves in foreign banks of acknowledged solvency, for the exclusive purpose of earning interest that would increase said reserves.

LAWS AFFECTING THE CURRENCY

Decree No. 93, of July 10, 1923

ARTICLE 1. The Banco Internacional de Costa Rica in accordance with clause (a) of article 5 of Decree No. 4, of May 17, 1922, shall credit to the account of the Government the sum of 1,472,242 colones, the equivalent of double the face value of the minted silver which it received from the administration of the revenues for disposal for account of the Government in accordance with said law.

ART. 2. The Banco Internacional shall restamp this minted silver at double its original value, and shall retire from circulation an amount in bills which shall be equal in value to that represented by the silver placed in circulation in accordance with this law.

ART. 3. The silver coins of the country at present in circulation shall be received in payment of taxes and duties at double their face value until three months after the date of this law, and after this period shall be redeemed for their intrinsic value in relation with bills, computed on an exchange basis of 4 colones to \$1, as fixed by the Caja de Conversion.

ART. 4. The silver coins received by Government offices in accordance with the above article may be restamped as before indicated, or exported to be sold, as the needs of circulation may demand.

ART. 5. The restamped silver shall be legal currency and shall be received without restriction of any nature by the Government in payment of duties and taxes, but the public is not obliged to receive it in amounts in excess of 50 colones.

Decree of January 19, 1924

Considering:

1. That law No. 93, of July 10, 1923, provides that the Banco Internacional de Costa Rica shall restamp and place in circulation at double their face values the silver coins of the country which were delivered to it by the Administracion Principal de Rentas;

2. That although the restamping of the 25 and 50 centimo pieces is being accomplished without serious difficulties, the same would not occur with the 5 and 10 centimo coins, owing to their flimsy and worn condition;

4. That a silver coin 0.650 fine and weighing 3.45 grams would be equal to one-half of the value of a coin which now circulates with a value of 50 centimos, and that, therefore, the minting of such a coin would respond to the end pursued by decree No. 93, and would be the most convenient form of obviating the difficulties in complying with the laws that are presenting themselves, and at the same time would result in providing a public commodity;

It is decreed:

The Banco Internacional de Costa Rica shall proceed to melt all the coins received, and also the defective 25 and 50 centimo pieces and the not-restamped silver disks, and to mint with this material 25 centimo coins 0.650 fine and weighing 3.45 grams.

FRENCH WEST INDIES—GUADELOUPE

EXCERPTS FROM MONETARY LAW OF NOVEMBER 26, 1924

ARTICLE 1. The unit of the monetary system of the Republic of Guatemala is called "quetzal," and is represented by 1.504665 grams of pure gold. (One quetzal equivalent to 60 pesos then in circulation.)

ART. 2. The coins shall be of the following denominations: Gold, 20, 10, and 5 quetzales; silver, 1, half, and quarter quetzal; copper-aluminum, 5 pesos, 1 peso, 50 centavos.

ART. 3. The composition of the coins shall be as follows: Gold, 900 parts gold and 100 parts copper; silver, 720 parts silver and 280 parts copper; copper-aluminum, 910 parts copper and 90 parts aluminum.

ART. 5. The weight of the coins shall be as follows: 20-quetzal coin, 30.0933 grams fine weight and 33.437 grams gross weight; 10-quetzal coin, 15.04665 grams fine weight and 16.7185 grams gross weight; 5-quetzal coin, 7.523325 grams fine weight and 8.3592 grams gross weight; 1-quetzal coin, 24 grams fine weight and 33.3333+ grams gross weight; half-quetzal coin, 12 grams fine weight and 16.6666+ grams gross weight; quarter-quetzal coin, 6 grams fine weight and 8.3333+ grams gross weight; 5-peso coin, 4.55 grams copper and 0.45 gram aluminum; 1-peso coin, 2.73 grams copper and 0.27 gram aluminum; half-peso coin, 1.729 grams copper and 0.171 gram aluminum.

ARTS. 16 and 17. Gold coins shall be legal tender to any amount; silver coins to the amount of 10 quetzales; and copper-aluminum coins to the amount of 1 quetzal.

ART. 18. The United States gold coins shall be unlimited legal tender at the rate of 1 quetzal, or 60 pesos to the dollar.

ART. 20. During one year after this law enters into force United States bank notes and silver and gold certificates shall be regarded as gold.

Temporary provision.—The copper-nickel 2-reales, 1-real, half-real, and quarter-real pieces which are in circulation shall continue to be legal tender at their nominal value on an equal footing with the copper-aluminum coins. All the other old coins are demonetized.

HAITI

Haiti has no gold or silver currency. The actual currency consists of paper gourdes, the fractional currency being taken care of by nickel and copper coins. The paper circulation in 1924 was as follows: Low value, 6,500,000 gourdes; high value, 11,775,000 gourdes. The authorized issues are as follows: 8,500,000 in 1-gourde bills, 7,000,000 in 2-gourde bills, 2,000,000 in 5-gourde bills, and 2,500,000 in 10-gourde bills.

HONDURAS

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1924, was as follows: Gold, 10 fine kilos (321 ounces), valued at \$6,400; silver, 100 fine kilos (3,215 ounces), valued at \$2,000.

The estimated import of United States gold coin during 1924 was from \$15,000 to \$20,000.

The quantity of gold and silver produced from deep mines and exported to the United States during 1924 was as follows: Gold, 138 fine kilos (4,437 ounces), valued at \$88,320; silver, 68,000 fine kilos (2,186,200 ounces), valued at \$1,360,000.

COLOMBIA

THE FIRST YEAR OF COLOMBIA'S CENTRAL BANK

[From *Commerce Reports*, September 22, 1924]

The Banco de la República at Bogota, Colombia, was founded as a semi-official bank of issue on July 20, 1923. One of the principal functions of the bank was to regularize the currency of Colombia and to replace with its own convertible notes the several nondescript varieties of paper that have been in circulation. The new bank notes were to be issued for the purchase of gold coin or bullion and for the purchase or discount of commercial and agricultural paper and bills of exchange on foreign countries. These notes have been successfully put into circulation, 10,179,631 pesos being outstanding on June 30, 1924. The bank received 10 per cent Government cedulas in exchange for an equal amount of 2 per cent Treasury cedulas which were circulating as money and for whose retirement the bank assumed responsibility. The retirement of the paper money of other kinds than the convertible bank notes is expected to progress until it is entirely eliminated.

LAWS AFFECTING THE CURRENCY

Base-metal coins

[Federal law of July 19, 1923]

1. The Government is authorized to mint and put in circulation coins of base metal (nickel, copper, aluminum, or alloys thereof) to replace the bank notes of small denomination (5,000 crowns and less), the amount coined not to exceed 20,000 crowns per capita.

2. The denominations of the coins may be 100, 200, 500, 1,000, 2,000, and 5,000 crowns.

3. The coins shall be accepted by all federal and other public treasuries at their face value to the amount of 200,000 crowns in the case of 1,000, 2,000, and 5,000 crown denominations, and to the amount of 20,000 crowns in the case of smaller denominations; in private transactions they shall be accepted to the amount of 100,000 and 10,000 crowns, respectively.

MONETARY SYSTEM

[Excerpts from the Federal law of December 20, 1924]

The National Council decreed:

ARTICLE I. The schilling is established as the monetary unit, divided into 100 groschen, and substituted in the place of the crown.

ART. II. The conversion of crowns into schillings will be made at the rate of 1 schilling to 10,000 crowns.

ART. IX. (1) The Federal Government will coin for the account of the Confederation gold coins of 100 and of 25 schillings, the schilling containing, for this purpose, 0.21172086 gram of fine gold.

(3) The gold coins of the Confederation have unlimited legal tender quality.

ART. X. (1) An alloy of 900 parts gold and 100 parts copper will be used for the gold coins of the Confederation.

(2) 42.5088 100-schilling pieces or 170.0352 25-schilling pieces will be manufactured from 1 kilogram of standard gold, or 47.232 100-schilling pieces or 188.928 25-schilling pieces will be manufactured from 1 kilogram of fine gold.

(3) The 100-schilling piece has therefore a gross weight of 23.5245 grams and a fine weight of 21.172086 grams; the 25-schilling piece has a gross weight of 5.8811 grams and a fine weight of 5.29302168 grams.

ART. XI. (1) The mint will coin Confederation gold pieces for private individuals furnishing the necessary gold.

ART. XIII. The subsidiary silver coins will be minted and issued in accordance with the law of December 21, 1923, with the following modifications:

(1) The amount of silver coins put in circulation must not exceed 10 schillings per capita.

(2) The alloy used for silver coins will contain 640 parts silver and 360 parts copper. The weight of the 2-schilling piece is fixed at 12 grams; of the 1-schilling piece, at 6 grams; and of the half-schilling piece at 3 grams; in private transactions no one is bound to accept silver coin for an amount of more than 50 schillings.

ART. XIV. The minor coins will be minted in accordance with the Federal law of July 19, 1923, with the following modifications:

(1) The total amount of coin put in circulation must not exceed 5 schillings per capita.

(2) The coins will be minted in groschen instead of crowns.

ART. XV. (1) The subsidiary silver coins and the minor coins will be struck exclusively for the account of the Confederation.

ART. XVI. (1) The national gold coins of 100, 20, and 10 crowns, as well as the fractional coins of 5, 2, and 1 crowns and of 20, 10, 2, and 1 hellers, and the Austrian florin pieces will cease to be legal means of payment on December 31, 1925.

(2) The coins of 1,000, 200, and 100 crowns struck under the Federal law of July 19, 1923, will be accepted for a value of 10, 2, and 1 groschen, respectively, until the date of their retirement from circulation.

(3) The 1-schilling pieces bearing the date of 1924 and struck under Federal law of December 21, 1923, will cease to be legal means of payment on December 31, 1924. They will be accepted, however, in payment or exchanged without any limit as to amount until December 31, 1926, and at their full nominal value by the treasuries of the Confederation and any other public treasuries, as well as the Austrian National Bank.

BELGIUM

The total import of United States gold coin and bullion into the Belgium-Luxembourg Economic Union during 1924 was as follows: Coin, 20 francs (\$3.86); bullion, 13 fine kilos (418 ounces), valued at 185,957 francs (\$35,890).

The total amount of notes of banks of issue used for monetary purposes on December 31, 1924, was 7,674,216,141 francs.

LAWS AFFECTING THE CURRENCY

By royal decrees of August 3 and November 1, 1924, the legal circulation among private individuals of the following silver coins is abolished, beginning March 1, 1925, in view of their subsequent demonetization: The Belgian 5-franc coins bearing the effigy of Leopold I and those bearing the effigy of Leopold II and issued prior to 1868; and the 2-franc, 1-franc and 50-centimes coins bearing the effigy of Leopold II.

[Excerpts from the law of March 1, 1921]

The National Parliament of the Czechoslovak Republic resolved by this law:
 PARAGRAPH 1. The Government is authorized to mint at first small coins of Czechoslovak currency of 20 and 50 hellers each, and then crown pieces of bronze alloyed with nickel in the proportion of 80 parts of copper to 20 parts of nickel.

From 1 kilogram of this composition there are to be coined 300 20-heller, 200 50-heller, and 150 crown pieces.

PAR. 2. These small coins are minted at the cost of the State, the total not exceeding 200,000,000 crowns.

PAR. 3. The State and other public treasuries shall accept the crown piece without limit, but the 20 and 50 heller pieces only to the amount of 20 crowns.

In private intercourse no one is obliged to accept the crown pieces to the amount of more than 100 crowns, and the small coins for no more than 20 crowns.

[Excerpts from the law of June 22, 1922]

The Czechoslovak National Parliament agreed on the following law:

PARAGRAPH. 1. The Government is authorized to coin other small coins in denominations of 10, 5, and 2 hellers, the 10 and 5 heller pieces to be made of 92 parts of copper alloyed with 8 parts of zinc, the 2-heller piece from pure zinc.

From 1 kilo of the coin metal there are to be minted 500 10-heller, 600 5-heller, and 500 2-heller pieces.

PAR. 2. These small coins are minted at the cost of the State, the total not exceeding 40,000,000 crowns.

PAR. 3. The State and other public treasuries shall accept 10 and 5 heller pieces for no more than 10 crowns and the 2-heller pieces for no more than 1 crown.

LAWS AFFECTING THE CURRENCY

Bill concerning the establishment of the gold unit in Esthonia passed by the state assembly on June 20, 1924.

1. The present bill fixes as the gold unit of the Esthonian Republic the crown, containing 0.403226 gram of pure gold.

A special law will govern the minting of gold money as well as the placing of such money into circulation.

2. Until the gold currency has been placed in circulation parties are entitled to conclude contracts due in Esthonia by mutual agreement as well as to grant obligations in crowns.

3. All obligations made in crowns by mutual agreement are to be settled in Esthonian marks (in treasury notes or in notes of the Bank of Esthonia) according to the rate of the crown existing on the day of payment.

The crown is quoted on the Reval exchange in accordance with gold exchange on the world market.

If there is no quotation on the day of payment, the payment has to be made according to the last quotation.

The exports of gold and silver during 1924 were as follows: Gold coin, 664,738,832 Esthonian marks (\$1,781,500); gold bullion, 233,144,152 Esthonian marks (\$624,826); silver coin, 17,494,603 Esthonian marks (\$46,885).

FIUME

MONETARY RÉGIME OF FIUME

[From *Moniteur des Intérêts Matériels*, Brussels, March 10-11, 1924]

The *Gazetta Ufficiale* of Italy has just published the decree making the lira legal tender in the city of Fiume (part annexed to Italy). The Yugoslav crown will be exchanged against 0.40 lira and the stamped Austro-Hungarian crown against 0.10 lira for amounts not exceeding 10,000 Austro-Hungarian crowns; for larger amounts the rate will be 0.07 per crown.

NOTE ISSUE OF GERMAN PRIVATE BANKS

[From Commerce Reports, December 8, 1924]

Besides the Reichsbank and the Rentenbank, there are four private German banks which have the right of note issue. Under the new law, passed in conformity with the Dawes plan, the note circulation of the Bayerische Notenbank and the Saechsische Bank, Dresden, are limited to 70,000,000 reichsmarks, and of the Wuerttembergische Bank and the Badische Bank to 27,000,000 reichsmarks, respectively. Until the liquidation of the Rentenbank is completed, however, the permissible note issue of all these four banks is limited to 8.5 per cent of the average amount of Reichsbank notes in circulation during the preceding three months. Consequently at the present time the Bayerische Notenbank and the Saechsische Bank are limited to 37,663,250 reichsmarks each and the Wuerttembergische Notenbank and the Badische Bank to 14,527,255 reichsmarks each.

Gold in private banks at the close of 1924

[From Statistisches Jahrbuch, Berlin, 1925]

	Reichsmarks
Bavarian Note Bank	28,560,000
Saxon Bank	16,984,000
Wuerttemberg Bank	8,000,000
Baden Bank	5,596,000
Total	59,140,000
United States equivalent	\$14,087,148

LAWS AFFECTING THE CURRENCY

Coinage law of August 30, 1924

1. The monetary system of Germany is based on gold. The unit of account is the reichsmark, divided into 100 reichspfennigs.
2. The following coins shall be minted: 20 and 10 reichsmark gold pieces; silver pieces of 1 to 5 reichsmarks; pieces of 1, 2, 5, 10, and 50 reichspfennigs.
3. From 1 kilo of pure gold are minted $139\frac{1}{2}$ 20-reichsmark pieces, or 279 10-reichsmark pieces. The alloy consists of 900 parts gold and 100 parts copper. The Minister of Finance, with the consent of the Senate, shall determine the composition of the silver coins, as well as the composition, weights, and shape of the reichspfennig coins.
4. Until further legislation the following coins shall be current: The gold coins issued under laws of December 4, 1871, July 9, 1873, and June 1, 1909; the silver coins issued under law of March 20, 1924; the rentenpfennig coins issued under presidential decree of November 8, 1923; and the copper coins issued under laws of July 9, 1873, and June 1, 1909.
9. In private transactions the silver coins are legal tender to the amount of 20 reichsmarks, and the minor coins to the amount of 5 reichsmarks.
15. The nickel, aluminum, iron, and zinc coins issued under prior laws are demonetized.

Law of March 20, 1924, concerning new silver coins

1. The composition of the coins is 500 parts silver and 500 parts copper. The weight and shape of the coins are to be determined by the Minister of Finance.
2. The total amount of the new silver currency shall not exceed 5 marks per capita. It may, however, be raised to 10 marks with the consent of the Senate and of a Parliament committee.
3. In payment 1 silver mark is equivalent to 1 gold mark, or 1/2790 kilo of fine gold.
4. In private transactions the silver coins are legal tender to the amount of 20 marks.

IMPORTS AND PRODUCTION

The total imports of United States gold bullion and gold coin during 1923 were 2.3 kilos (74 ounces) and 0.4 kilo (13 ounces), respectively.

The production of gold and silver from the mines of the country during 1922 was as follows: Gold, 168 kilos (5,401 ounces); silver, 111,416 kilos (3,582,024 ounces).

CURRENCY IN 1923

Legally the gold standard is still in force, although no gold coins are in circulation. Subsidiary silver coins have been demonetized. The base-metal subsidiary coins in denominations of 1, 2, 5, 10, and 50 pfennigs, as well as the aluminum coins in denominations of 3, 200, and 500 marks, circulated but a short time, owing to the depreciation of money. Toward the end of 1923 there were put in circulation coins in denominations of 1, 2, 5, 10, and 50 rentenpfennigs. During the first 10 months only bank notes, reichscheine, and darlehnskassenscheine were used as a rule in cash payments. In November were added the gold-loan pieces in denominations ranging between one-tenth and 5 dollars, and rentenmark tokens at the rate of 1 gold mark or 1 rentenmark to 10/42 United States dollars.

GIBRALTAR

The official currency of Gibraltar is British sterling, but owing to its proximity to Spain and the large daily influx of Spainards into the garrison, Spanish money has a larger circulation.

At present gold is not in circulation.

On August 5, 1914, the colonial government enacted an ordinance authorizing the issue of local treasury notes of various denominations to an amount not exceeding £250,000, which stand secured as a charge on the assets and general revenue of the colony.

According to the Gibraltar Blue Book for 1923, the estimated amount of paper money in circulation at the end of that year was £150,000.

British Treasury notes and the notes of the Bank of Spain are also in large circulation.

The currencies of most foreign countries are also accepted at the current rates of exchange.

LATVIAN MONEY REFORM

[By Consul John P. Hurley, Riga, February 26, 1924]

It is planned to withdraw from circulation 400,000,000 roubles' worth of paper money in consideration of the bronze and nickel coins emitted to the extent of 8,000,000 lats. Further paper money for 500,000,000 roubles will be withdrawn to make up for the 10,000,000 lats' worth of silver coins to be put into circulation. The remaining 1,520,000,000 roubles, paper money, will be exchanged by the Bank of Latvia for lat notes, and by way of securing the value of the lat notes the Bank of Latvia will obtain from the Ministry of Finance a quantity of gold and foreign currency equal to 30,400,000 lats. This sum comprises the former gold fund, which includes the 4,000,000 gold roubles received from Russia as well as the foreign currency realized through the sale of flax.

EXCERPTS FROM MONETARY LAWS OF AUGUST 3, 1922, AS AMENDED BY LAWS OF SEPTEMBER, 1923, AND MARCH 18, 1925

The Latvian monetary system is based on gold. The monetary unit is one lat, containing 0.2903226 gram of pure gold and divided into 100 santimi.

Gold money shall be minted in coins of 10 and 20 lats.

The gold coins shall contain 0.900 pure gold. The weight of the 10-lat coin shall be 3.225805 grams, and of the 20-lat coin 6.45161 grams.

Small metal money shall be minted as follows: 1, 2, and 5 lat pieces in silver; 1, 2, 5, 10, 20, and 50 santimi pieces in metal to be determined by the cabinet of ministers.

Gold coin may be issued in an unlimited quantity. The silver coin issued shall not exceed 30 lats and the other small coin 10 lats per capita.

The contents of the silver coins shall be 0.835 pure silver and 0.165 copper.

LIECHTENSTEIN, PRINCIPALITY OF

SILVER COINAGE EXECUTED IN SWITZERLAND DURING 1924

[From the report of the Federal council for 1924]

The silver coins executed for the Principality of Liechtenstein during 1924, having exactly the same weight, fineness, and dimensions as the corresponding Swiss coins, from which they differ only in design, were of the following denominations and amounts:

Denomination	Pieces	Value	
		Francs	U. S. dollars
5 francs.....	15,000	75,000	14,475
2 francs.....	50,000	100,000	19,300
1 franc.....	60,000	60,000	11,580
Half franc.....	30,000	15,000	2,895
Total.....	155,000	250,000	48,250

LITHUANIA

Bank of Lithuania notes in circulation on December 31, 1924, 92,982,281 litas; notes held as reserve stock, 131,201,380 litas.

By act of January 5, 1924, the Diet granted the president of the Republic plenary powers in financial matters.

PRESIDENTIAL DECREE OF JANUARY 20, 1924

The monetary unit of the Polish Republic is the zloty, containing nine thirty-firsts of a gram of pure gold. The zloty is divided into 100 grosze. The State only can mint money. The following coins shall be minted: Gold coins, 100, 50, 20, and 10 zloty; silver coins, 5, 2, 1, and half-zloty; nickel coins, 20 and 10 grosze; bronze coins, 5, 2, and 1 grosze.

The gold coins shall be minted of an alloy containing 900 parts gold and 100 parts copper. From one kilo of this alloy 3,100 gold zlotys shall be minted. The weight of a 100-zloty coin shall be 32.25806 grams. The weight of a 50-zloty coin shall be half that, and so on in proportion.

¹ Including German, Russian, and Austro-Hungarian notes converted after the war into national currency.
² 1 Zloty=1,800,000 marks.

The 5-zloty silver coin shall be minted of an alloy containing 900 parts of silver and 100 parts of copper. The 2-zloty, 1-zloty, and half-zloty silver coins shall be minted of an alloy containing 835 parts of silver and 165 parts of copper. The weight of the 5-zloty coin shall be 25 grams; of the 2-zloty coin, 10 grams; of the 1-zloty coin, 5 grams; and of the half-zloty coin, 2.5 grams.

The nickel coins shall be minted of pure nickel. The 20-grosze coin shall weigh 5 grams, and the 10-grosze coin, 3 grams.

The bronze coins shall be minted of an alloy containing 950 parts of copper, 40 parts of tin, and 10 parts of zinc. The weight of a 5-grosze coin shall be 3 grams, of a 2-grosze coin 2 grams, and of a 1-grosze coin 1.5 grams.

ZLOTY REPLACES POLISH MARK

[By Conrad C. Sealey, secretary American-Polish Chamber of Commerce and Industry, in Commercial and Financial Chronicle, May 17, 1924]

On January 12 the Senate approved the law on financial rehabilitation, including the introduction of a new currency, the zloty, fixing the relation of the new monetary unit to the Polish mark at 1,800,000 Polish marks per zloty, and establishing a new bank of issue to replace the Polish State Loan Bank, which the Polish Government fell heir to after the German occupation.

Gold and silver reserves held by the Polish Treasury have been greatly increased, for in January the treasury held gold worth \$12,500,000 and silver worth approximately \$2,000,000, while in February this amount was increased by \$5,000,000.

THE NEW ZLOTY MONEY WELL RECEIVED

[From Commerce Reports, May 19, 1924]

The printing of Polish marks has ceased since March 28; the Government stopped borrowing from the Polish State Loan Bank on February 1. The new money has been placed in circulation with an issue of 300,000,000 zlotys. Authorization has also been given for the issuance of 150,000,000 zlotys in coins, but as yet they are not ready; pending their receipt Government script is being used for small tender. The old Polish mark ceases to be legal tender on July 1 and will be invalid for exchange for the new currency after May 31, 1925. The new money has been well received and the conversion to the new values, as expressed in zlotys, has been universal. The new bank is at present negotiating with the Government for the purchase of unpledged Government gold and foreign currency reserves, which it is intended shall be used as security to cover further zloty currency emissions. It is understood that the Polish marks are to be exchangeable for the new currency at 1,800,000 marks to the zloty.

NEW POLISH BANK OF ISSUE

[From The Statist, London, February 9, 1924]

We learn from Warsaw that a new bank of issue, called Bank Polski, is just being launched with a capital of 100,000,000 zloty, divided into 1,000,000 shares of 100 zloty each. This bank will replace the Polska Krajowa Kasa Pożyczki, the present Polish State Bank, which will then cease its activity as the Polish marks issue bank. The zloty is the new Polish currency on a gold basis, 1 zloty being the equivalent of 1 gold franc. This attempt to establish a new bank of issue fits in with the Polish Government's efforts to stabilize the currency. Of itself, of course, a bank of issue can not effect stabilization; the essential achievement must be budget equilibrium, or covering the deficit by means of a long-term loan, raised either internally or externally.

[From Commerce Reports, May 19, 1924]

The new Polish bank of issue commenced operation on April 28, superseding the old Polish State Loan Bank.

POLISH MARKS

[From Moniteur des Intérêts Matériels, Brussels, November 1-2, 1924]

A decree issued by the Minister of Finance establishes as follows the rate of conversion of Polish marks into zlotys: (1) Each Polish mark issued prior to December 31, 1919, is exchangeable for 1 zloty; (2) those issued in 1920, 1921, 1922, and 1923 are equivalent to one one-hundredths, two one-hundredths, five one-hundredths, and one one-thousandths of a zloty, respectively. The conversion privilege ceases on May 31, 1925.

PORTUGAL

Approximate stock of gold and bank notes used for monetary purposes on December 31, 1924: Gold coin and bullion in home banks, 9,702,180 escudos (\$10,483,205); notes of banks of issue in circulation, 1,762,625,000 escudos.

Premium on gold in 1924: Highest, 3,800 per cent; lowest, 2,600 per cent; average, 3,200 per cent.

GOLD PRODUCTION IN 1924

[From bullion circular of Samuel Montagu & Co., Apr. 8, 1925]

According to a Moscow report, the output of gold from the field discovered in 1923 at Alden in the Yakutsk Republic was last year 5,950 kilos, which is about one-third the amount of the entire gold output of Soviet Russia.

CURRENCY

[From The Economist, London, February 16, 1924]

As regards currency reform, by January 1, 1924 there had been handed over to the State Bank by its issue department bank notes to the value of 28,000,000 chervontsy, gold cover being maintained at 50 per cent instead of the legal 25 per cent of their face value. The chervontsy remains at a slight premium on sterling, and constituted 80 per cent of the total value of the currency in circulation on January 1, 1924. As soon as the budget is balanced the Soviet rouble treasury notes now in circulation will be replaced by a silver small-change currency.

SILVER COINAGE IN RUSSIA

[From Moniteur des Intérêts Matériels, Brussels, Mar. 28, 1924]

The Commissariat of Finance announces that part of the silver coinage needed in 1925 had to be manufactured abroad. One of the largest European mints has been commissioned with the coinage of 50-kopeck silver pieces to the amount of 40,000,000 gold roubles. The Leningrad mint can not coin at present more than 35,000,000 roubles of silver pieces. The enlargement of the plant will enable it to turn out 70,000,000 gold roubles a year. On January 1 of next year the circulation of silver coin will amount to 100,000,000 gold roubles.

RUSSIAN COINAGE EXECUTED ABROAD

Russian coinage executed by the British Mint during 1924 consisted of 40,000,000 half-ruble (50-kopeck) pieces, valued at 2,000,000 chervonetz, equivalent to United States \$10,292,000.

SPAIN

SILVER PRODUCTION IN 1924

[From Consular Report. By courtesy of U. S. Bureau of Mines]

The silver production in 1924 amounted to 89,579 kilos (2,879,965 ounces).

EXCERPTS FROM COINAGE REGULATIONS ADOPTED BY THE COUNCIL OF MINISTERS ON NOVEMBER 18, 1924

Gold coins

ARTICLE 1. The Minister of Finance is authorized to order the coinage of 1,000,000 20-dinar coins, the year of emission to be 1925.

Art. 2. The alloy of which these coins will be composed shall contain 0.9 fine gold and 0.1 copper. The weight of the 20-dinar coin shall be 6.45161 grams.

Fractional currency

Art. 1. The Minister of Finance is authorized to order the coinage of 50,000,000 half-dinar pieces, 75,000,000 1-dinar pieces, and 50,000,000 2-dinar pieces.

Art. 2. The alloy of which this currency must be coined shall contain 25 per cent pure nickel and 75 per cent pure copper.

Art. 3. The weights of the coins shall be as follows: Of the half-dinar piece, 2.5 grams; of the 1-dinar piece, 5 grams; and of the 2-dinar piece, 10 grams.

Art. 7. These coins shall be used for the exchange of the State paper currency of 1 and half dinars at present in circulation.

Art. 8. These coins must be accepted as legal tender to the amount of 100 dinars for the half-dinar coins, of 200 dinars for the 1-dinar coins, and of 500 dinars for the 2-dinar coins.

ASIA

ARABIA

OMAN

CURRENCY SITUATION

The currency of the country is the Maria Theresa dollar and the coffer coin minted in 1895 to the order of the Sultan. In Muscat and Mutrah sovereigns, Indian currency notes, and Indian rupees are generally accepted.

The Maria Theresa dollar fluctuates in value considerably, being affected by the world price of silver, by the local demand in the date season, and by the state of the Bahrein pearl market.

Trade accounts are kept in mohamadis and gagh, imaginary coins. There are two kinds of mohamadis, black and white, equal to 1/20.5 and 1/11.5 dollar, respectively. The white is used in the wholesale trade accounts and the black for fruit, vegetables, etc. Most hundis from India show their face value in mohamadis and not in rupees. 20 gagh=1 mohamadi; 11½ mohamadis=1 dollar; 100 mohamadis=1 toman.

BRITISH INDIA

The silver domestic coinage executed in home mints during the year ended December 31, 1924, consisted of 5,734,622 half-rupee pieces having a face value of 2,867,311 rupees (\$1,395,377).

The silver coinage executed in British India for Ceylon during 1924 consisted of 1,010,000 50-cent pieces, having a face value of 505,000 rupees, and 1,508,058 10-cent pieces, having a face value of 150,806 rupees.

The amount of silver coin withdrawn from monetary use during 1924 was as follows: Domestic coin for recoinage, 12,595,344 rupees (\$6,129,524); East African German rupees for industrial use, 286,106 rupees (\$139,233).

YUNNAN

The domestic silver coinage executed in home mints during the year ended December 31, 1924, consisted of 16,800,000 50-cent pieces having a face value of 8,400,000 Yunnan dollars (\$3,062,640).

The estimated quantity of gold and silver used in the industrial arts during 1924 was as follows: Gold, 1,000 Chinese ounces (1,206 troy ounces); silver, 10,000 Chinese ounces (12,060 troy ounces).

The total import of United States gold coin during 1924 consisted of 400 20-dollar pieces (\$8,000).

The estimated average annual production of gold and silver is as follows: Gold, 500 Chinese ounces (603 troy ounces), valued at 36,500 Yunnan dollars (\$13,308); silver, from 50,000 to 80,000 Chinese ounces (from 60,300 to 96,480 troy ounces), valued at 100,000 to 160,000 Yunnan dollars (\$36,460 to \$58,336).

Approximate stock of silver coin and paper money used for monetary purposes on December 31, 1924

Character of stock	In home Government treasuries	In banks and circulation	Total used for monetary purposes

¹ Conversion rate, 1 Yunnan dollar=\$0.3646 in 1924.

Imports of gold coin and silver bullion from Hongkong during 1924: Gold coin (including 400 United States \$20 pieces), 10,000 Haikwan taels (\$8,984); silver bullion, 1,145,184 Haikwan taels (\$1,028,856).

Exports of silver coins (including 529,500 Indo-China piasters) to Tongking during 1924: 353,000 Haikwan taels (\$317,142).

CURRENCY

The local currency has depreciated considerably during the past few years. As showing the tendency in 1924, the following selling rates for the Hongkong dollar as quoted by the Banque de l'Indo-Chine are given:

Jan. 2, 1924.....	Yunnan.....	\$1. 41
Apr. 1, 1924.....	do.....	1. 52
July 1, 1924.....	do.....	1. 51½
Oct. 1, 1924.....	do.....	1. 51½
Dec. 8, 1924.....	do.....	1. 52½

The bank ceased quoting on Hongkong on this date because the Government began taking available credits on that port. Actual transactions during the rest of the year ranged between 1.64 and 1.72 Yunnan dollars, and now are about 2.00.

LAWS AFFECTING THE CURRENCY

Legal tender (supplementary) enactment, 1921

It is hereby enacted by the rulers of the Federated Malay States in council as follows:

The particulars of the standard coin set forth in the first schedule hereto shall, as respects such coins issued after the 6th day of December, 1920, be substituted for the corresponding particulars contained in the second schedule to the legal tender enactment, 1913.

The particulars of the coin set forth in the second schedule hereto shall, as respects such coin issued after the 6th day of December, 1920, be substituted for the corresponding particulars contained in the third schedule to the legal tender enactment, 1913.

The particulars of the coin set forth in the third schedule hereto shall, as respects such coin issued after the 17th day of May, 1920, be substituted for the corresponding particulars contained in the schedule to the legal tender (supplementary) enactment, 1918.

The high commissioner may by proclamation declare that Straits Settlements dollars and 50-cent pieces coined up to and including the 6th day of December, 1920, shall, notwithstanding anything contained in the legal tender enactment, 1913, cease to be legal tender.

CURRENCY

Gold: Egyptian pound.

Silver: Coins of 2, 5, and 20 Egyptian piasters.

Nickel: 1 Egyptian piaster, one-half Egyptian piaster, 2 milliemes, 1 millieme.

Paper notes: 1 pound, half pound, quarter pound, 10 piasters, 5 piasters.

All notes under one Egyptian pound are gradually being retired from circulation and silver distributed in their place by banks. At the present time practically all 25, 10, and 5 piaster notes are collected, while a decreasing number of 50-piaster notes are still seen in the market.

PROPOSED NEW CURRENCY

The new coins will be the dinar, equivalent to 1 pound sterling, the shekel or meshkal, or the tenth of a dinar, equivalent to 2 shillings, the half shekel, equivalent to 1 shilling, the drakmon or dirhem, which is a quarter of the shekel, and finally the pruta or the salf, which is one one-thousandth of a dinar.

CURRENCY AND SILVER RESERVE

[From Commerce Reports, March 2, 1925]

Although Siam's currency is theoretically supported by gold, actually silver forms the basis, and the Government has not attempted to maintain the tical on the gold standard rate of 12 ticals to £1. Siamese currency notes were made inconvertible in 1918, and the Minister of Finance recently announced that the period of inconvertibility has been extended for another two years, commencing January 27, 1925. The silver reserve stands at approximately 48 per cent, 2 per cent less than the minimum required by the paper currency act.

STRAITS SETTLEMENTS

The total import of United States gold coin during 1924 was 2,386,978 Straits Settlements dollars (\$1,355,326).

³ Alloy metal.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1923 AND 1924

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted into bullion.

Monetary stock of principal countries of the world, end of calendar year 1923

¹ Average price per fine ounce in London.
² Estimate based on other years' production.
³ Estimate based on United States imports of ore and base bullion.
⁴ Amount exported in 1924.

⁵ Last year's figures.
⁶ Production of Nigeria.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold			Silver			Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight	
	Fine ounces	Value	Fine ounces	Value	Fine ounces	Coining value	Fine ounces	Coining value in standard silver dollars	Gold	Silver

Production of gold and silver in the world since 1860

[The annual production of 1860 to 1872 is obtained from 5-year period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint]

Calendar years	Gold		Silver	
	Fine ounces	Value	Fine ounces	Commercial value ¹
1860.....	6,486,262	\$134,083,000	29,095,428	\$39,337,000
1861.....	5,949,582	122,989,000	35,401,972	46,191,000
1862.....	5,949,582	122,989,000	35,401,972	47,651,000

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1923

REPORT OF THE DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 20, 1923.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1923, being the fifty-first annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1922.

OPERATION OF THE MINTS AND ASSAY OFFICES.

INSTITUTIONS OF THE MINT SERVICE.

The following institutions of the mint service continued to operate throughout the fiscal year ended June 30, 1923: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Deadwood, Seattle, and Salt Lake City. The seven last-named institutions are, in effect, bullion-purchasing agencies for the large institutions, and also serve the public by making, at nominal charge, assays of ores and bullion. Electrolytic refineries are operated at the New York and San Francisco institutions.

COINAGE.

Domestic coinage during the fiscal year 1923 amounted to \$172,196,760. The operations of the mints were devoted largely to the coinage of standard silver dollars, a total of \$110,715,000 having been made. During considerable periods the mints were on an over-time basis, at times working 16 hours per day in order that the "dead" stock of silver bullion purchased under the terms of the Pittman Act might be reduced to usable cash. When conditions permitted, the facilities of the mints were used in the coinage of gold and a total of \$60,190,000, all in double eagles, was minted. The total amount of subsidiary silver coins minted was only \$675,000, consisting of \$137,000 in Monroe Doctrine Centennial half dollars, and \$538,000 in dimes. Of the minor coins minted, \$602,450 was in nickels and \$14,310 in bronze. Foreign coins executed amounted to 3,900,000 pieces, and were all made at the Philadelphia mint. They included 1,000,000 silver 1-sol pieces and 2,000,000 nickel 5-centavo pieces for Peru; and 500,000 bronze 1-centavos, and 400,000 half-centavos for Nicaragua.

The total number of pieces executed during the fiscal year, foreign and domestic, was 136,758,500, as compared with 117,912,205 pieces during the previous year.

GOLD OPERATIONS.

Gold acquired by the Government at the several mint service institutions during the fiscal year 1923 totaled \$336,600,217.61. While this is a material reduction as compared with the two preceding fiscal years—in 1922 the amount was over 540 million dollars, and in 1921 over 673 million dollars—it is approximately double the normal receipts of the pre-war period. The greater part of the gold receipts came to the New York assay office in the form of imported refined bars. United States gold coin received by the mints for recoinage amounted to \$2,340,593.65, transfers of gold between mint offices totaled \$6,060,296.72; and the aggregate amount of gold handled by the mint service during the fiscal year 1923 was \$345,001,107.98.

SILVER OPERATIONS.

The receipts of purchased silver during the fiscal year 1923 aggregated 70,112,962.26 fine ounces, of which 68,705,426.77 ounces was Pittman Act silver, costing \$1 per ounce. The average cost of other purchased silver was \$0.6698+ per ounce, the total cost being \$942,781.82 for 1,407,535.49 fine ounces. Silver received in exchange for bars bearing the Government stamp totaled 1,968,039.79 fine ounces; United States silver coin received for recoinage totaled 2,367,425.40 fine ounces with a recoinage value of \$3,272,749.82; silver deposited in trust by other Governments totaled 857,502.69 fine ounces; and transfers between mint service offices totaled 1,130,954.30 fine ounces; making the aggregate quantity of silver handled by the mint service during the fiscal year 76,436,884.44 fine ounces.

On June 30, 1923, 184,377,282 ounces of silver accepted under the terms of the act approved April 23, 1918, sometimes known as the Pittman Act, had been delivered to mint institutions, leaving approximately 16,207,000 ounces yet to be delivered. During the month of May the tenders of silver were very large, producers evidently using all available means to increase their output. As a result of these large tenders, and in order to avoid any possibility of accepting excessive tenders and at the same time to assure the most equitable treatment to the American producers of silver, an announcement was made on May 29, 1923, that further tenders would be received until the close of business on June 15, 1923, and would be placed on file in the order of their receipt, pending the checking up of prior tenders, and that acceptance of such quantities of silver as were required to complete the Government needs under the Pittman Act would be made later in the order in which tenders had been received. No tenders have been received since June 15, and

MONROE DOCTRINE CENTENNIAL HALF DOLLAR.

on June 16 acceptances were made of all eligible tenders received up to the close of business June 2. Unaccepted tenders to the amount of 3,072,267 ounces are still held in suspense by the Director of the Mint, thus giving an adequate margin to take care of such further adjustments as may prove to be necessary as deliveries are received and final check is made of the proofs tendered in support of the purchases.

The total number of silver dollars recoined under the terms of the Pittman Act amounted to 222,146,473 on June 30, 1923, leaving approximately \$48,000,000 to be coined. It is anticipated that the greater portion of these dollars will have been executed by the end of the fiscal year 1924, but the completion of the recoinage will be delayed for some time pending the refining and parting from gold of several million ounces of silver purchased in the form of doré bullion.

The market price in New York of silver which was not eligible for sale under the Pittman Act averaged, during the fiscal year ended June 30, 1923, \$0.67269; the lowest New York price was \$0.62875 on December 15, 1922; the highest \$0.7225 on July 5, 1922.

DEPOSITS OF GOLD AND SILVER.

The large number of deposits received during the fiscal year ended June 30, 1923 was second only to that of the record year, the total of 90,491 comparing with last year's 91,669. Pittman Act silver purchases made up the greater portion, but imports of gold continued to be a strong feature.

The deposits of the minor offices increased about 13 per cent in number, the total for the seven offices being 3,395 as compared with 2,999 last year and 2,572 during the fiscal year 1921.

REFINERIES.

The refineries at the New York and San Francisco institutions were operated during the year, their efforts having been directed particularly to the refining of silver purchased under the Pittman Act. The production of electrolytically refined silver increased over that of the prior year by about 77 per cent, the 1923 figure being 3,570,784 ounces and the 1922 figure 2,016,384 ounces. The production of electrolytically refined gold increased about 5 per cent over the prior year, the 1923 figure being 1,738,848 ounces and the 1922 figure 1,651,506 ounces.

NEW COIN DESIGN.

The Monroe Doctrine Centennial half dollar, illustrated on the opposite page, was authorized by the act of January 24, 1923, which provided for the issue of not more than 300,000 of the coins in commemoration of the enunciation of the famous doctrine. They were issued through the Los Angeles Clearing House, in connection with a Historical Revue and Motion Picture Exposition.

The coin bears on one side profile likenesses of Presidents James Monroe and John Quincy Adams, with the names Monroe and Adams underneath. On the reverse appears a representation of the Western Hemisphere—North America in the form of a draped figure with the laurel of peace, reaching to South America, also a draped figure carrying a horn of plenty; their hands touch at the Panama Canal. The West Indies are indicated and the ocean currents are lightly shown. Between the dates 1823–1923 are a scroll and a quill pen, symbolizing the "Treaty." The words "Monroe Doctrine Centennial, Los Angeles" also appear. Other mottoes and inscriptions are as required by the coinage laws.

STOCK OF COIN AND MONETARY BULLION IN THE UNITED STATES.

On June 30, 1923, the estimated stock of domestic coin in the United States was \$1,677,358,039, of which \$916,285,186 was gold, \$491,886,769 silver dollars, and \$269,186,084 subsidiary silver coin.

The stock of gold bullion in the mints and assay offices on the same date was valued at \$3,051,852,718.93, a gain since June 30, 1922, of \$201,622,329.79; the stock of silver bullion was 30,761,014.11 fine ounces, a decrease of 13,573,047.48 ounces.

PRODUCTION OF GOLD AND SILVER.

The production of gold and silver in the United States during the calendar year 1922 was as follows: Gold, \$48,849,100, a reduction from the previous year of \$1,218,200; and silver, 56,240,048 fine ounces, an increase over the previous year of 3,187,607 ounces.

INDUSTRIAL ARTS.

The amount of gold consumed in the industrial arts during the calendar year 1922 was \$59,806,052, of which \$36,697,980 was new material. Silver consumed amounted to 37,910,099 fine ounces, of which 31,300,931 fine ounces was new material.

EXPORT OF GOLD COIN.

The net export of United States gold coin for the fiscal year ended June 30, 1923, was \$1,431,911.

APPROPRIATIONS, EXPENSES, AND INCOME.

Appropriations available for mint service during the fiscal year 1923 totaled \$1,555,603.66, and reimbursements to appropriations for services rendered amounted to \$531,895.26, making a total of \$2,087,498.92.

Expenses amounted to \$2,022,667.37, of which \$2,020,930.37 were chargeable to appropriations, and \$1,737 chargeable to income.

The income realized by the Treasury from the mint service aggregated \$26,708,686.38, of which \$25,575,032.93 was seigniorage. It should be noted, however, that the seigniorage on the coinage of silver dollars, which amounted to \$25,066,842.35 for the fiscal year 1923, merely offsets an equal loss which was incurred when silver

dollars were melted and sold under the terms of the Pittman Act. The seigniorage on subsidiary silver coins was \$84,288.50, on nickel \$422,055.43, and on bronze coins \$1,846.65.

Summary of appropriations, expenses, and balances, fiscal year 1923.

ADDITIONS AND IMPROVEMENTS.

At the New York assay office refining operations were suspended during the first six months of the year to permit installation of a ventilating system in the operating rooms, together with a Cottrell electrical precipitator for the elimination of the smoke nuisance and recovery of values carried off in the furnace gases. Considerable difficulty always attends the disposal of fumes in a metallurgical plant but, located as this plant is in the heart of the financial district of New York, the problem here has been quite a serious one. To properly ventilate and to reduce the high temperature of the melting rooms, and at the same time eliminate the smoke nuisance or air pollution which has been a source of complaint from offices in adjoining buildings, has always presented an annoying problem in connection with the operation of this institution. Preliminary tests of flue gases and dust losses, made by the Research Corporation, indicated substantial losses of the precious metals in furnace operations, and the amounts which, if recovered, would more than cover operating costs, repairs, depreciation, etc., of the installation. The equipment includes a No. 12 fan, American blower type, to handle 70,000 cubic feet of gas per minute, located on the second floor, together with a mixing chamber connected with a leader from the refinery melting room on the third floor and a leader from the deposit melting room on the first floor. The discharge from the fan is conducted through the old furnace flue to the ninth floor where it enters the treater. The treater or precipitator is of the box type, in two units specially designed to meet the limited space available; it consists of two dust chambers 28 by 9 feet by 12 feet high in which are suspended parallel plates with discharge electrodes midway between the plates. Under the action of a high-tension unidirectional current, the suspended metallic particles are removed from the gases as they travel through to the exit flue, which connects with a louver monitor 3 by 18 feet in the roof of the building. The high-tension unidirectional current for use in the precipitator is furnished by two

10-kilovolt ampere capacity equipments operated from a 220-volt, 2 phase, 60 cycle electrical power supply. A synchronous induction motor is used to drive a direct connected mechanical rectifier, rectifying the high-voltage current obtained from a special high-voltage transformer. The results so far obtained are very encouraging.

The completion of the vaults on the third and fourth floors will materially relieve the vault congestion and expedite the handling of bullion in the melting and refining department.

Among the more important changes at the Denver Mint was the substitution of fuel gas for oil at the annealing furnaces, which obviated the necessity of operating high-pressure plants for the furnaces and the centrifugal steam dryer. The copper oxidation was noticeably decreased, necessary tumbling-barrel treatment lessened, and a net saving of about 30 per cent in annealing cost concluded.

The engine and generating plant with associated machinery was disposed of, as for years it has been in disuse because electric current has been purchased at a figure considerably below the cost of possible mint production. The extensive space formerly occupied by this engine plant will now afford an ideal location for a double-decked storage vault to be installed during the coming year.

The machine shop at the Philadelphia Mint was engaged throughout the year in building mint machinery for that and other mints. Many improvements have been perfected in automatic-scale parts during the year and have been found to be superior in every detail to the parts originally made and used on these machines.

DEPOSITS OF GOLD AND SILVER, INCOME, EXPENSES, AND EMPLOYEES,
BY INSTITUTIONS, FISCAL YEAR 1923.

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1923, and the number of employees on June 30, 1923, at each institution, are shown in the following table:

Institution.	Number of deposits of gold and silver.	Number of mint service transfers.	Coining value of gold and silver purchased. ¹	Gross income.	Gross expense.	Excess of income (+) or of expenses (-).	Employees June 30, 1923.

PURCHASE OF MINOR COINAGE METAL FOR USE IN DOMESTIC COINAGE.

During the fiscal year 1923 there was purchased at the mint at San Francisco 100,515.62 troy ounces of copper at a cost of \$1,033.87 for use in minor coinage, being the by-product of the refinery connected with that institution.

There were no purchases during this year of nickel and bronze blanks prepared for stamping.

MINOR COIN DISTRIBUTION COSTS.

The only minor coinage distribution costs incurred during the fiscal year 1923, payable from the profits on minor coinage, were paid by the Philadelphia Mint, \$1,521.94.

MINOR COINS OUTSTANDING.

The following statement shows the coinage of minor coins by denominations since 1793, the amount on hand, issued, melted, and outstanding June 30, 1923:

Denomination.	Coined.	On hand.	Issued (net).	Melted.	Amount issued and outstanding June 30, 1923.

PROOF BULLION (1,000 FINE).

In order to establish uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required. The amount made during the fiscal year 1923 was: Gold, 600 ounces; silver, 650 ounces.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1923.

The aggregate quantity of metals operated upon in the above mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1923, was 29.47 million fine ounces of gold and 324.52 million fine ounces of silver. There were also operated upon at the coinage mints 4.12 million ounces of

minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

REFINING OPERATIONS.

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1923 was 5,309,633.046 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 935,984.584 fine ounces; the product of melting operations (only) totaled 1,881,953.950 ounces; making the total output of the refineries 8,127,571.580 fine ounces. Details are shown in the following table:

WASTAGE AND LOSS ON SALE OF SWEEPS.

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1923, was \$15,935.46. A loss of \$18,795.17 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given below:

Item.	Mint at—			Assay office at New York.	Total.
	Philadel- phia.	San Fran- cisco.	Denver.		
Gold wastage:					
Melting and refining department.....	\$1,479.65				\$1,479.65
Coining department.....

Total reimbursements.....	18,757.12	10,486.54	3,365.58	2,121.39	34,730.63

ENGRAVING DEPARTMENT.

Less than 2,500 United States coinage dies were made during the year. Of these, 1,400 were for the silver dollar. Master dies and hubs were made for the Monroe doctrine centennial half dollar and also for the Venezuela, Peru, and Nicaragua coinages.

Dies for a new medal for Coast Guard good conduct award and 128 hubs and dies for the military and naval insignia were made in this department, together with 110 postage stamp dies for embossing envelopes.

An electric furnace, to be used for hardening purposes only, was installed during the year and has been in operation for four months. It is, as yet, too soon to speak positively of its value, which will be demonstrated in the life of the dies in the coining presses, but present indications are of favorable results. It is slower than the gas furnace, but this is probably an advantage. The electric furnace gives a definite record of the critical point in the heating of the steel, when quenching will give the best results. This critical point changes with the slightest variation of the component parts of the steel. The daily expense of running the electric furnace is less than the cost incurred in running a gas furnace for hardening.

MEDALS MANUFACTURED.

The medal division manufactured 25,068 medals of a national character during the year, of which bronze good-conduct medals for the Marine Corps and rifle and pistol competition medals for the Army form a large proportion. The number includes 241 gold and 374 silver medals, also 5,683 bronze medals for sale to the public at approximate cost price, at the Philadelphia Mint.

MEDALS SOLD.

Medals manufactured at the mint at Philadelphia were sold during the fiscal year, as follows:

Items.	Pieces.	Value.
Gold medals.....	241	\$7,821.10
Silver medals.....	374	1,002.10
Bronze medals.....	25,049	5,580.16
Total fiscal year 1923.....	25,664	14,403.38
Total prior fiscal year.....	5,996	10,375.13

NUMISMATIC COLLECTION.

By reason of the definite closing of the mints to visitors, the numismatic collection, housed in the Philadelphia Mint for many years, was transferred prior to the close of the fiscal year 1923 to the National Museum in Washington, where it will be available for inspection by visitors, and where it will be augmented by the much smaller collection already owned by the museum.

EMPLOYEES.

The total number of officers and other employees of the institutions of the mint service on June 30, 1923, was 738, as below:

¹ Conducted as assay offices.

VISITORS.

During the fiscal year 1923 the policy of closing the mints to visitors was definitely adopted. This was done because of the necessity of providing all practical safeguards for the care of the large values kept in the mints, safety being considered paramount to the educational value and pleasure afforded visitors in witnessing coining operations.

ORE ASSAYS.

A comparative statement of ore assays made at the minor assay offices since 1915 shows increased use of our facilities by the mining industry as the result of reducing our charge for this service to a nominal sum. The increased number of assays in 1922 and 1923 seems to indicate revival of prospecting, doubtless incident to the slowing down of business in other lines.

Fiscal year.	Ore assays made.	Amount of charges collected.
1915.....	1,404	\$885.65
1916.....	2,318	1,678.00
1917.....	2,842	1,931.75

LABORATORY OF THE BUREAU OF THE MINT.

From the domestic coinage of the calendar year 1922 the assayer of this bureau tested 186 gold coins and 632 silver coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of gold coins above standard (the limit of tolerance being 1 one-thousandth above or below) was 0.4

one-thousandths, while the greatest deviation below was 0.8 one-thousandths.

The greatest deviation in fineness of silver coins above standard (the limit of tolerance being 3 one-thousandths above or below) was 1.6 one-thousandths, while the greatest deviation below was 1.4 one-thousandths.

The following table summarizes results of fineness tests on domestic coin:

Fineness (thousandths).	Number of gold coins.			Number of silver coins.

ASSAY COMMISSION'S ANNUAL TEST OF COIN.

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the prior year, by a commission of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 14 to 16, 1923, reported the following results of their examination:

Your committee on counting respectfully reports that the packages containing the pieces reserved by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes of the United States, were delivered to us by the superintendent of the mint at Philadelphia, and upon comparison with the transcripts kept by the Director of the Mint were found to be correct as to date, number of delivery, number of pieces, and denomination.

The verification of the packages being completed, they were delivered to the committees on weighing and assaying.

The committee on weighing have to report that they have weighed the coins shown in an appended list and have found them to be standard within the legal tolerances. The coins were selected at random from those reserved by the mints at Philadelphia, San Francisco, and Denver.

The coins were directly weighed against a set of sealed-coin weights which were accompanied by a certificate signed by the Director of the Bureau of Standards, Department of Commerce, and which gave the value of the weights in terms of United States standard. The weighings were made on a Troemner balance supplied by the Philadelphia Mint and was tested by your committee as to the equality of the arms and as to its sensibility, which were entirely satisfactory.

As a further check upon the Philadelphia Mint, the set of troy weights used as a standard by this mint, from 500 ounces to 0.0001 of an ounce, were carefully intercompared with one another and found to be in agreement within negligible quantities.

The committee on assaying respectfully reports that it has completed the assays on samples selected from the residues of reserved coins, representing all denominations coined by the mints at Philadelphia, San Francisco, and Denver during each month of the year 1922.

The results of the assays as reported in the following schedules show that the coinage has been well within the legal limits of 1 one-thousandth for gold coin and 3 one-thousandths for silver.

The highest assays on individual gold coin selected for assay were: Philadelphia 900.4; San Francisco, 900.5.

The lowest assays on gold coin were: Philadelphia, 899.8; San Francisco, 899.3.

The highest assays on individual silver coin selected were: Philadelphia, 900.7, San Francisco, 901.3; Denver, 900.7.

The lowest assays on silver coin were: Philadelphia, 898.6; San Francisco, 898.6; Denver, 898.6.

The assay balances were found to be in adjustment and the materials used in making the assays were found to be satisfactory, and the committee therefore considers the assays to be reliable.

ASSAY OF COINS MELTED IN MASS.

Philadelphia, gold, 27 double eagles, fineness, 900. Philadelphia, silver, 60 dollars, 6 half dollars Grant Memorial, fineness, 899.1.

San Francisco, gold, 45 double eagles, fineness, 899.7. San Francisco, silver, 57 dollars, fineness, 899.8.

Denver, silver, 61 dollars, fineness, 900.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1923, is respectfully submitted.

F. E. SCOBEEY,
Director of the Mint.

Hon. ANDREW W. MELLON,
Secretary of the Treasury.

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND
SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR
1922.

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Geological Survey, the latter making a mine census in each State and the former working backward from point shipments through refiners, bankers, and other distribution works to the mine production estimate made by the survey. The official estimate is based on the material output of such sources as mines and smelters.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD
AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1922

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1922.

INTRODUCTION.

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Geological Survey, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the survey. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1922 is estimated to have been \$48,849,100, and the production of silver is estimated at 56,240,048 fine ounces. A comparison of these figures with those for 1921 indicates approximately 1.2 million dollars decrease in production of gold and approximately 3.2 million ounces increase in silver production.

Comparison with prior year production of gold shows unusually small fluctuations, the greatest gain being \$321,200 in Utah, while the larger losses were \$853,700 in Alaska and \$640,700 in Colorado.

Silver production materially increased over the prior year in Arizona, 2.1 million ounces, Utah 1.4, and Nevada 1.3 million ounces; Idaho's decrease was 1.4 million ounces and California's one-half million ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Geological Survey, follows; further information concerning same can be obtained by those interested by addressing the survey, in Washington.

ALASKA.

Alaska mines in 1922 produced gold valued at \$7,422,367, compared with an output of \$8,073,540 in 1921. The value of silver produced in Alaska in 1921 was \$729,945, or \$31,140 less than in 1921.

In 1922 about 40.6 per cent of the total gold production came from lode mines, compared with 47.5 per cent credited to lode mines in 1921, and 53 per cent in 1920.

The auriferous lode mines produced during the year gold valued at \$3,015,771 and silver valued at \$80,598. Twenty-five gold and silver lode mines and six prospects were operated in Alaska in 1922.

The copper ores contained \$11,596 in gold and \$622,978 in silver. The value of the placer gold produced in Alaska in 1922 was \$4,395,000

compared with an output of \$4,226,000 in 1921. The silver recovered from placer mining operations was valued at \$26,369. In 1922 there was a marked improvement in the placer mining industry, which was expressed not only by a slight increase in the gold output, but also in the number of large placer mining projects that are being developed. A much larger number of men were employed than have been employed during the past several years, installing large mining plants that are as yet unproductive. It is certain that when these plants are operated the output of placer gold will be increased; it will be larger in 1923 than it was in 1922. It is estimated that about 507 placer mines were operated in the summer of 1922, and about 120 during the previous winter, but many for only a part of the season.

Twenty-three gold dredges were operated in Alaska in 1922, compared with 24 in 1921. These dredges handled about 3,186,343 cubic yards of gravel and produced gold valued at \$1,767,753. In 1921 dredges handled about 2,799,519 cubic yards of gravel and recovered gold worth \$1,582,520. The average gold recovery per cubic yard was about 55 cents in 1922 and about 57 cents in 1921. Now that means of transportation are improving and it is becoming recognized that there are large areas of dredging ground in Alaska, this form of mining is being more widely extended. Up to the end of 1922 gold to the value of \$24,875,099 had been mined by dredges.

ARIZONA.

Metal production of Arizona was unusually small in 1922 as the mines had not recovered from the 1921 general depression which followed the war period.

The gold production had a value of \$3,524,134, an increase of \$593,831 over that of 1921, according to V. C. Heikes, of the United States Geological Survey. The largest part of the gold, or \$2,113,767, had its source in bullion from ore treated by amalgamation or cyanidation. Crude ore shipped directly to smelters contained gold valued at \$1,260,989, and concentrates, \$136,379. The gold from deep mines was derived from the following sources: Dry or siliceous ore, \$2,241,139; copper ore, \$1,193,696; lead ore, \$76,967; and copper-lead ore, \$351. Gold contained in copper ore was valued at \$744,452 more than in 1921 as most of the large copper producers resumed operations during the first half of the year. More than 97 per cent of the State's gold came from copper ore and siliceous ore combined. Placers produced only \$11,981 in gold.

The silver output amounted to 4,531,864 ounces, an increase of 2,062,470 ounces, or nearly 42 per cent, as a result of the resumption of activities in the copper camps. The sources of the silver output were as follows: Siliceous ore, 1,012,558 ounces; copper ore, 2,766,277 ounces; lead ore, 744,559 ounces; and copper-lead ore, 8,357 ounces.

There were 318 mines producing during the year, of which number only 33 were placer mines.

CALIFORNIA.

The value of the mine output of gold, silver, copper, lead, and zinc in California in 1922 was \$21,332,168, an increase of \$379,745, as compared with the output in 1921, according to J. M. Hill, of the

United States Geological Survey. There were considerable decreases in the production of gold and silver, but the production of copper, lead, and zinc increased materially. There were 565 producing mines, 8 less than in 1921, of which 282 were placers and 283 deep mines.

The gold yield of California in 1922 was valued at \$14,670,346, a decrease of \$1,034,476, as compared with 1921. The decrease in gold yield was due to a decreased production from placer mines from which \$2,654,969 less gold was won in 1922 than in the previous year.

The total gold yield from placer mines in 1922 was \$5,499,855 (37 per cent of the total gold yield of the State), of which 35 dredges produced 91 per cent. The dredge production, which decreased \$2,757,572, was \$4,999,215 in 1922, making the total yield by dredges in the State since the beginning of the industry \$129,992,199.

The yield of gold from deep mines in 1922 was valued at \$9,170,491, an increase of \$1,620,493.

Of the total gold output of the State 61 per cent was recovered from dry gold ore, and about 1 per cent each from dry silver ore and copper ore. The amount of gold recovered from copper-zinc ore and lead ore was negligible.

The production of silver in California in 1922 was 3,100,065 ounces, or 529,158 ounces less than in 1921.

The deep mine production of silver was 3,080,452 ounces, which is 510,141 ounces less than in 1921.

Dry gold ores yielded 97,128 ounces of silver; dry silver ores, 2,375,361 ounces; copper ores, 320,977 ounces; lead ores, 263,681 ounces; copper-zinc ores, 15,390 ounces; and copper-lead ores, 7,915 ounces of silver.

COLORADO.

Colorado mines in 1922, according to Charles W. Henderson of the United States Geological Survey, produced \$6,373,419 in gold and 5,855,911 ounces of silver, as compared with \$6,835,328 in gold and 5,631,657 ounces of silver in 1921.

The situation in the Colorado metal-mining industry during the first half of 1922 was disappointing, but there was a marked improvement as the year drew to a close, particularly when the November prices for lead and zinc warranted hope for the stability of market. There was also increased interest by capitalists in investigation of the industry.

The price of nearly \$1 an ounce for silver from domestic ores under the Pittman Act helped to keep many Colorado mines in operation in 1922. The price of lead was low until November, and lead-silver ores depended on the silver content to carry the costs.

The gold mines can hardly be said to have recovered from the depression due to war costs. Many of them remained idle and others worked on a small margin of profit.

The dredges and hydraulic mines near Breckenridge produced \$255,298 in gold in 1922, compared with \$337,980 in 1921.

Teller County produced \$4,037,592 in gold in 1922, as compared with \$4,291,883 in 1921.

CENTRAL STATES.

As in 1921, only three of the Central States reported any production of silver in 1922—Michigan, Missouri, and Illinois. The total production was 595,671 fine ounces against 381,974 ounces in 1921.

All the silver production of Michigan, 376,990 ounces, was derived from lode copper mines, and the output increased 66,263 ounces.

A larger quantity of skimmings from lead derived from galena ores mined in southeastern Missouri was refined, and the production increased from 69,902 ounces in 1921 to 212,656 ounces in 1922. No silver was reported in 1922 from Missouri copper ores.

From the lead concentrates derived from southern Illinois fluor-spar mines, 6,025 ounces of silver were recovered, which was 4,680 ounces more than in 1922. The chief producers of silver were the Fairview, Rosiclare, and the Hillside mines.

EASTERN OR APPALACHIAN STATES.

The mine production of gold in the eastern or Appalachian States increased from 480.55 fine ounces, valued at \$9,934, in 1921, to 620.22 fine ounces, valued at \$12,821, in 1922. Georgia produced \$3,224; North Carolina, \$1,939; South Carolina, \$32; Tennessee, \$4,320; Pennsylvania, \$2,600; and Virginia, \$706.

The production from placer mines was 110.78 ounces, an increase of about 34 ounces. The placer production came from 11 small mines in Georgia, North Carolina, and South Carolina. The gold recovered from siliceous ores in Georgia, North Carolina, and Virginia was 150.49 ounces, produced by 8 small mines. Of the total gold derived from copper ores in Tennessee and pyritiferous magnetite ores in Pennsylvania, 334.76 ounces, Tennessee produced 208.98 ounces.

Copper-lead ores shipped from Georgia produced 24.19 ounces of gold.

The mine output of silver in 1922 was 80,935 ounces, a decrease of 17,857 ounces, as compared with that of 1921. Of this output, 78,341 ounces was obtained from Tennessee copper ores, 2,215 ounces from Pennsylvania magnetite ores, 350 ounces from copper-lead ores from Georgia, 8 ounces from placer bullion, and 21 ounces from dry and siliceous ores.

IDAHO.

In 1922, according to C. N. Gerry of the United States Geological Survey, Idaho's output of gold was valued at \$501,405 and of silver, \$6,081,865. The output of gold and silver was close to that of 1921, as several of the large producers were idle part of the year.

Gold decreased from \$545,731 in 1921 to \$501,405 in 1922. Of this total the placer gold amounted to \$183,972, against \$181,600 in 1921. The gold won by dredges was valued at \$158,827, an increase from \$151,762 in 1921. Dry or siliceous ore produced more gold than any other kind of ore, or \$187,802. Gold in copper ore was valued at \$42,290; lead ore, \$53,542; and copper-lead ore, \$33,799. In 1922 nearly 74 per cent of Idaho's gold came from placers and siliceous ore.

The silver output was 6,081,865 ounces, an increase of 1,337 ounces. Most of the output of silver, or 5,450,038 ounces, came from lead ore.

Copper-lead ore supplied 459,529 ounces; siliceous ore, 91,377 ounces; copper ore, 44,550 ounces; and placers, 1,959 ounces. The Coeur d'Alene region alone produced 4,690,097 ounces of silver.

There were 248 mines producing during the year, of which 94 were placer mines and 154 deep mines.

MONTANA.

Montana's mine output of gold in 1922, according to C. N. Gerry of the United States Geological Survey, was valued at \$1,656,757, an increase of \$175,994. Of this total, \$1,584,971 came from deep mines and \$71,786 from placers. Most of the placer gold was won by dredge operations, but production from this source ceased in October. As in former years, the gold was derived principally from siliceous ore, which was the source of \$1,102,703 in gold. Gold from other sources was as follows: Copper ore, \$276,323; lead-zinc ore, \$87,723; zinc ore, \$47,066; lead ore, \$57,530; and copper-lead ore, \$13,626.

The silver output increased from 6,558,713 ounces in 1921, when many of the Butte mines were idle, to 12,468,151 ounces in 1922. There was a general increase in silver from the main sources, though the copper mines at Butte were not operated at capacity. Copper ore supplied the largest quantity of silver, or 5,446,684 ounces; lead-zinc ore, 2,391,872 ounces; siliceous ore, 2,197,802 ounces; zinc ore produced 1,661,234 ounces; lead ore, 647,754 ounces; and copper-lead ore, 122,153 ounces.

There were 393 producing mines, of which 315 were deep mines and 78 were placer properties.

NEVADA.

The gold output of Nevada in 1922, according to V. C. Heikes of the United States Geological Survey, had a value of \$3,297,384, against \$3,312,757 in 1921. The production of gold from the Tonopah district, Nye County, increased to \$1,179,302 on account of the stimulus of \$1 silver. Most of the gold, or an amount valued at \$2,904,525, came from siliceous ore. Copper ore supplied gold valued at \$90,969; placers, \$239,842; lead ore, \$61,599; lead-zinc ore, \$410; copper-lead ore, \$39.

The production of silver in 1922 was 8,619,587 ounces, against 7,083,782 ounces in 1921, an increase of 1,535,805 ounces. The mines of Tonopah, in Nye County, produced most of the silver of the State, 5,436,080 ounces in 1922, an increase from 4,623,901 ounces in 1921. Most of the silver of the State, 7,809,857 ounces, had its source in siliceous ore, the greater part of which was cyanided. Silver from lead ore amounted to 698,590 ounces; lead-zinc ore, 87,150 ounces; copper-lead ore, 2,153 ounces; copper ore, 17,127 ounces; and placers, 4,710 ounces.

There were 387 mines producing in Nevada in 1922, of which 42 were placer mines and 345 were deep mines.

NEW MEXICO.

Bullion, ore, and concentrates shipped from New Mexico in 1922, according to Charles W. Henderson of the United States Geological

Survey, contained in recoverable metals \$412,693 in gold and 752,240 ounces of silver. Comparative figures for 1921 were \$196,822 in gold and 571,899 ounces of silver. The production was that of 17 placer mines and 74 deep mines. The placer output was only 190 ounces of gold and 39 ounces of silver. Of the crude ore treated, copper ore contained 6,806 ounces of gold and 111,624 ounces of silver; dry and siliceous ore contained 12,857 ounces of gold and 614,811 ounces of silver.

OREGON.

The total value of the output of gold, silver, copper, and lead in Oregon in 1922 was \$828,894, a decrease of \$117,745, as compared with 1921, according to J. M. Hill, of the United States Geological Survey. The output of gold decreased, but the output of silver, copper, and lead was greater than in 1921. There were 170 producing mines in the State, 44 deep mines and 126 placers.

The gold output in 1922 was valued at \$531,568, a decrease of \$350,000, as compared with 1921; deep mines produced \$220,000 and placer mines \$130,000 less than in the previous year.

The production of gold from placer mines in Oregon in 1922 was valued at \$346,137, of which the dredges produced \$269,994. The production of gold from deep mines was valued at \$185,431. Dry gold ores yielded gold valued at approximately \$127,958 and the copper ores \$57,292, whereas the dry silver ores yielded almost no gold.

The production of silver in 1922 was 151,812 ounces, as compared with 42,120 ounces in 1921. The increase is largely attributable to the operation of the Bay Horse mine, which produced dry silver ore in 1922 for the first time. The placer mines produced only 2 per cent of the silver, copper ores 9 per cent, dry gold ores 10 per cent, and dry silver ores 79 per cent of the silver output of Oregon.

SOUTH DAKOTA.

The Black Hills of South Dakota have produced from 1876 to 1922, inclusive, a total of \$236,746,624 in gold, and 7,032,217 fine ounces of silver. In 1922 bullion from ore mined and milled and from a few small placer mines contained \$6,517,788 in gold and 118,760 ounces of silver, against \$6,605,167 in gold and 112,464 ounces of silver in 1921. Three small placers yielded only 88 ounces of gold. The Homestake mine, at Lead, the principal producing mine in South Dakota since the beginning of mining in 1875, produced \$6,285,318 in bullion in 1922. Most of the remainder of the gold and silver produced in 1922 was from the Trojan property.

TEXAS.

Texas mines in 1922 produced 644,980 fine ounces of silver and small quantities of lead and copper. Since the beginning of mining in Texas in 1885, the output of silver has been 16,455,480 ounces, most of which has come from siliceous ores mined from the Presidio silver mine, in the Shafter district, Presidio County. The small production of silver from lead and from copper ores came from Hudspeth County.

UTAH.

The value of the 1922 metal output of Utah increased nearly 84 per cent over that of 1921, according to V. C. Heikes, of the United States Geological Survey, on account of the general activity in the State and the effort to market ore containing silver. Increases were general, but those of silver, copper, and lead were especially large.

The gold output was valued at \$2,296,855, an increase of \$526,950 over that of 1921. Separated as to source, siliceous ore was most important, containing gold valued at \$792,840; copper ore supplied \$752,427 in gold; lead ore, \$369,059; lead-zinc ore, \$379,673; and copper-lead ore, \$726. Placer mines produced only \$2,130 in gold in 1922.

The silver output of Utah increased from 12,251,998 ounces in 1921 to 17,271,100 ounces in 1922, which is a record for the State. Separated as to source, the silver came principally from lead ore, which supplied 8,183,741 ounces; dry or siliceous ore supplied 8,110,733 ounces; copper ore, 473,284 ounces; lead-zinc ore, 482,417 ounces; and copper-lead ore, 20,919 ounces. The Tintic district, in Juab and Utah counties, produced 8,533,954 ounces, against 7,577,202 ounces in 1921. The Bingham district of Salt Lake County produced 1,381,299 ounces, and the Park City region, in Summit and Wasatch counties, 5,245,194 ounces.

There were 154 producing properties in 1922, of which 7 were placer mines.

WASHINGTON.

The production of gold, silver, copper, lead, and zinc in Washington in 1922, according to C. N. Gerry, of the United States Geological Survey, had a total value of \$580,808, an increase of \$248,495 from the production of 1921. Though the increase was general, the metal output was far below that of a normal year. The mines of Washington had not recovered from the depression which followed the war.

The gold output had a value of \$186,965, an increase of \$58,479. Most of the gold of the State, or \$182,550, came from siliceous ore; copper ore supplied only \$794 in gold; lead ore, \$263; and placers, \$3,358. Since 1860 Washington has produced \$28,442,523 in gold.

The silver output in 1922 was 205,046 ounces, valued at \$1 an ounce, an increase of 62,596 ounces. Of the total silver, 106,243 ounces had its source in siliceous ore, 68,239 ounces in copper ore, and 30,463 ounces in lead ore.

There were 13 placers and 33 deep-producing mines.

WYOMING.

The total production of gold in Wyoming from 1867 to the end of 1922 has been \$1,237,528, and the output of silver for the same period has been 69,259 ounces. The only deep mine operated in 1922 was the old Rambler, which shipped copper ore containing gold, silver, and platinum. Four small placer mines contributed to the output of \$1,207 in gold and 57 ounces of silver in 1922.

Refinery production of gold in the several States and Territories in 1921 and 1922, with the increase and decrease in each for the latter year.

¹ Includes small quantity of silver from placer mines.

² Includes silver in lead, silver-lead, lead-zinc, copper-lead, copper-lead-zinc, and zinc ores.

³ Philippine Islands excluded.

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792.

The refinery production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint.]

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1922.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record. The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1922, with the class of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended December 31, 1922.

Material.	Issued by—	Gold.	Silver.
		<i>Dollars.</i>	<i>Fine ounces.</i>

¹ Does not include silver bullion (a potential monetary asset) to the value of \$30,968,899, nor nickel and bronze coin, the value of which depends almost exclusively upon the Government impression rather than intrinsic metallic value or a specific reserve.

² Does not include gold bullion or foreign coin outside of vaults of the Treasury, Federal reserve banks, and Federal reserve agents.

³ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money out- and standard silver dollars, respectively.

⁴ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money out- side of the Treasury to arrive at the stock of money in the United States.

⁵ This total includes \$15,994,407 of notes in process of redemption, \$176,434,729 of gold deposited for redemption of Federal reserve notes, \$14,439,965 deposited for redemption of National bank notes, \$18,480 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,590,408 deposited as a reserve against postal savings deposits (approximate amounts).

⁶ Population of continental United States (estimated) July 1, 1923, 111,265,000; July 1, 1922, 109,743,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁷ Note.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$152,979,026.63 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars, held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Federal reserve bank notes and national bank notes are secured by United States Government obligations and a 5 per cent fund for their redemption is required to be maintained with the Treasurer of the United States in gold or lawful money.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873.

Fiscal year ended June 30—	Population.	Total stock of coin and bullion.		Per capita.

¹ Does not include silver bullion (a potential monetary asset) to the value of \$29,023,821, nor nickel and bronze coin, the value of which depends almost exclusively upon the Government impression rather than intrinsic metallic value or a specific reserve.

² Does not include gold bullion or foreign coin outside of vaults of the Treasury, Federal reserve banks, and Federal reserve agents.

³ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁴ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁵ This total includes \$18,905,065 of notes in process of redemption, \$186,139,037 of gold deposited for redemption of Federal reserve notes, \$1,087,798 of lawful money deposited for redemption of Federal reserve bank notes, \$12,507,205 deposited for redemption of national bank notes, \$24,130 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,670,993 deposited as a reserve against postal savings deposits.

⁶ Population of continental United States (estimated) Dec. 31, 1922, 110,560,000; Jan. 1, 1923, 108,917,000; Apr. 1, 1917, 103,716,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$152,979,026.33 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars, held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act. Federal reserve banks must maintain a gold reserve of at least 40 per cent including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Federal reserve bank notes and National bank notes are secured by United States Government obligations, and a 5 per cent fund for their redemption is required to be maintained with the Treasurer of the United States in gold or lawful money.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

United States gold coin in Canadian reserves on December 31, 1922.

THE COURSE OF GOLD AND SILVER.

The following review of the London market during the calendar year 1922 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

The review of the silver market for the year past presents fewer points of interest than usual. There have been no outstanding events to exercise much influence on the business done, and the extreme variations in price are less than usual. The highest price for prompt delivery during the year took place on May 22, viz, 37½d., and the lowest for delivery in two months 29½d., on December 22, but for long periods together the fluctuations were so small that there is very little to explain about them. How steady the market has been can be seen by the fact that there were 27 days when the cash price was between 32d. and 33d., 53 days between 33d. and 34d., 57 days between 34d. and 35d., and 113 days between 35d. and 36d., with short periods only below 32d. or above 36d., and it was only in the concluding weeks of December that a wave of depression, referred to below, spoiled the average and produced the lowest price of the year.

Supply has been normal and continental sales of silver have been only moderate, although the imports from Europe in the aggregate have reached a fairly important figure.

The main influences toward steadiness have been, as usual, the purchases made on account of China and India, the former contributing the greatest effect, as for long periods together China was a consistent buyer, both in London for shipment via Suez, and in America for shipment via San Francisco. For this reason sales to London from the United States have been small as compared with former years.

The Indian use of silver has maintained its usual amount, and the fact of a good monsoon this year has been a contributing cause, although the larger shipments of gold to that quarter have probably influenced the amount of silver which would otherwise have been sent there.

The above general statements require some more detailed account of the progress from month to month, and it may be stated that at the beginning of the year the price of silver was at 34½d. per ounce standard, but the Indian and China demand gradually induced a higher rate and the quotations rose slowly to 35½d. by January 30, there being an idea at that time that there might be a reimposition of an import duty in India, for revenue purposes, which would enhance the price. Later on there was less inquiry, and by the end of February the price had subsided to 32½d., but it quickly recovered and was about 1½d. higher throughout March and the first part of April, and was quoted 35½d. on April 19. A rising market in May culminated on the 22d at 37½d., but the general price afterwards was about 1½d. lower until July. From this point right on to the middle of October the fluctuations were very unimportant, with a general average of about 35d. per ounce standard, neither sellers nor buyers adopting any aggressive attitude.

All through the summer large amounts of silver were coined at the Canton mint in anticipation of a good development in China trade, but this seems to have been overdone, and in the early autumn that mint was closed. From then forward a more pessimistic feeling predominated, and China, which had bought silver largely, began to dispose of it in the open market, and continued to sell even after the price had given way to a considerable extent, and this quickly reduced the price to 34d. and 33d. Although India at first bought readily, the weakness in the market began to check this demand, and the Indian buyers themselves commenced to unload, with the result that by November 28 the price was back to 31½d. per ounce standard.

The feeling of the Chinese banks who had sold now experienced a change and some support began to be given to the market to cover up some of the heavy oversales, so that by December 5 the cash price recovered to 32½d., but this firmness was of short duration as, during the last few weeks of December both from India and China large amounts of silver were offered daily for forward delivery, the selling being principally of a speculative character, and resulted in a steady fall in price for that delivery until 29½d. was touched on December 22.

The cash price was not affected to the same extent, as good orders for immediate shipment to India and for covering short positions kept the cash price at a considerable premium over forward, a difference of 1d. being recorded on December 28.

The closing prices of the year are 31½d. for ready and 30½d. for forward delivery. The average cash price for the year is 34½d. per ounce standard.

A study of the returns of imports and exports of silver during the year reveals several valuable points, and although the figures for December are not yet available,

the Board of Trade returns for the 11 months to November present some interesting considerations. The net amount of foreign coin imported to November 30, 1922, is about £700,000 and of English coin of legal tender about £1,350,000.

Bullion unrefined from European countries is only about £700,000, which is £160,000 less than last year and £670,000 less than in 1920.

Refined bullion has a total import in the 11 months of about £4,350,000, itself £2,000,000 less than last year, and £2,250,000 less than in 1920.

The total imports of silver of all sorts (including over £1,500,000 of English coin) is about £9,000,000, whereas the total exports are about £12,000,000, £1,000,000 more than in 1921, and £1,700,000 more than in 1920, proving that the demand for shipment has been very large and greater than during the past two years, and is a significant answer to some who contend that the uses of silver are diminishing while the supply is increasing, for the figures as detailed above show an entirely different condition. It remains to consider how the exports could have been so much greater than the imports, and no doubt the explanation is to be found in the action of the English mint authorities in calling in a large amount of our former legal tender coins of 925 fine and reissuing them at a quality of 500 fine, the resulting silver recovered having been shipped to a large extent under the private arrangements made with certain Chinese banks to supply this silver as it has been required. If the market had not had this resource it is pretty evident that the supplies would have been much strained to produce the large amount of silver wanted, and such a demand would no doubt have resulted in higher prices for silver than have been actually current during the year.

The provisions of the Pitman Act in America have been in force all through the year, all silver produced in the United States having to be sold to the Treasury there at \$1 per ounce to make up the immense amount sold to the English Government at the time it was so greatly needed for Indian coinage.

The amount still required will absorb all the production of the United States for the whole of 1923, and there is an idea in some influential quarters in America that the demands of the world will increase sufficiently to nullify the effect of the marketing of United States silver after the Pitman Act provisions are complete. We are not prepared to indorse this view entirely, but there is plenty of room for a sustained demand if the development of trade with China and India, with their immense populations, should become a fact. Business all over the world has been restricted by the difficulties of exchange and other conditions arising from the war, and it is the hope and endeavor of all countries to rehabilitate commerce to its former status. If such a condition could be established, it is not unreasonable to think that silver will benefit also, and, as is always the case in estimating the requirements for the precious metals, it would be presumptuous to pronounce any certain development either toward a lower or a higher price for the same for some time to come.

GOLD.

The conditions under which the gold received here during the year could be dealt with are the same as last; that is to say, the arrivals of gold from South and West Africa are allowed to be exported under license, but not those received from other parts of the world. The price has been regulated by the exchange with the United States, which, taken as a whole, has risen continuously, a low exchange with New York producing a high price for gold, and a higher exchange a lower price; the highest quotation was 98s. 4d. per ounce fine on January 5 and the lowest 88s. 5d. about a fortnight ago, when the American exchange rose rather suddenly to its highest figure.

The actual receipts from Africa have been about £5,000,000 less than in 1921, and America has not received the whole, as there has been a strong demand for the metal for shipment to India, fully £13,000,000 of gold having been shipped to that country. India last year parted with about £8,000,000 at the high prices then obtainable, so that our eastern dependency has been able to recover the whole of that quantity at a much lower rate.

The premium on gold at its closing price is now only about 5 per cent, and will be lower if the American exchange approaches par, which is a contingency believed in by many.

The demand for gold for India was not so great during the past two months as in the earlier part of the year, with the exception of the last week, when the steamer of December 29 took £500,000 of gold for Indian ports.

VALUES OF FOREIGN COINS, OCTOBER 1, 1923.

In pursuance of the provisions of section 25, of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, and reenacted by section 522, Title IV, act of September 21, 1922, I hereby proclaim the following estimate by the Director of the Mint of the values of pure metal contents of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1923, expressed in any such metallic currencies: provided, however, that if no such value has been proclaimed, or if the value so proclaimed varies by 5 per cent or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined by the Federal Reserve Bank of New York and published by me as certified by said bank pursuant to the provisions of said section 25 as amended.

A. W. MELLON,
Secretary of the Treasury.

MONETARY LEGISLATION.

[PUBLIC—No. 391—67TH CONGRESS.]

[S. 4096.]

AN ACT to authorize the coinage of 50-cent pieces in commemoration of the one hundredth anniversary of the enunciation of the Monroe doctrine.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in commemoration of the one hundredth anniversary of the enunciation of the Monroe doctrine there shall be coined at the mints of the United States silver 50-cent pieces to the number of not more than three hundred thousand, such 50-cent pieces, to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That the coins herein authorized shall be issued only upon the request of the Los Angeles Clearing House and upon payment by such clearing house to the United States of the par value of such coins.

SEC. 3. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material and for the transportation, distribution, and redemption of coins, for the prevention of debasement or counterfeiting, for security of the coin, or for other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, January 24, 1923.

FOREIGN AND WORLD MONETARY STATISTICS.

The statistics of foreign countries on production, import, and export of gold and silver, coinage and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversion of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised tables for 1921 and incomplete tables for 1922 are printed, the tables following the other foreign data herewith.

NORTH AMERICA.

CANADA.

The amount of domestic silver coin withdrawn from monetary use for recoinage during the year ended December 31, 1922, was \$217,215.

Estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1922.

Material used.	Gold.		Silver.	
	<i>Fine ounces.</i>	<i>U. S. dollars.</i>	<i>Fine ounces.</i>	<i>U. S. dollars.</i>

¹ Held for redemption of Dominion notes.

² Deposited by banks to cover circulation in excess of paid-up capital.

Owing to prohibition of the export of gold and other regulations under the provisions of the finance act and amendments thereto, it may be said that there has been no free market for the metal, and that, consequently, gold has not been at a premium. On the other hand, a certain amount of gold has been purchased and payment made in American funds. It may be contended that this gold was at a premium which would be approximately equal to the premium in Canada on American dollars.

The imports into Canada of gold and silver during the year 1922 were as follows: Gold, \$24,000,000; silver bullion (mainly from the United States), \$657,760.

EXPORTS OF GOLD AND SILVER DURING 1922.

[From The Mining Journal, London, March 17, 1923.]

During the year ended December 31, 1922, exports of gold ore, dust, etc., totaled \$3,953,938. Silver ore and bullion was exported to the amount of 17,401,697 ounces (\$11,684,028).

GOLD AND SILVER PRODUCTION IN 1922

[From Dominion Bureau of Statistics.]

Gold production, 1,263,364 fine ounces; silver, 18,581,439 fine ounces.

MEXICO.

PRODUCTION OF GOLD AND SILVER IN 1922.

[From American Bureau of Metal Statistics, New York, 1922.]

The production of gold and silver during 1922 was 748,323 and 81,076,899 fine ounces, respectively.

MEXICO TO MINT GOLD ONLY.

[From The Numismatist, Federalburg, Md., March, 1923.]

The "coyotes" or curbstone brokers have been doing a flourishing business in Mexico on account of the depreciation of silver as compared with gold in that country. They had come to be a necessity to the public, who could resort to them when gold was required and thus avoid the payment of a premium arbitrarily fixed by the creditor.

The murmur of complaint among Mexican merchants has been growing stronger and stronger owing to the difficulty of carrying on business transactions without a sufficient supply of gold. The result of the overabundance of silver in comparison with the amount of gold coined has been to put a premium on the latter and cause it to be hoarded.

The Mexican Department of Finance and Public Credit has now definitely ordered that the coinage of silver be suspended. The activities of the mint are to be devoted to the coinage of gold, the Government having a sufficient quantity of that metal to keep up the output for several months to come.

In recent months transactions in silver money had become cumbersome and it was agreed among the principal banks of the country and some of the more important business houses not to make payments in silver of sums exceeding 20 pesos, but to carry on all their larger transactions with Mexican gold as a medium.

Gold was thus prevented from being sent out of the country, or from being hoarded, since it was so indispensable to commercial transactions. But however efficacious these measures may have been in securing such results, they also gave rise to serious disadvantages. Instead of an equitable discount on silver, in accordance with the valuations established in the mercantile centers, it depended on the will of the merchant whether he would accept silver in place of gold and gave him the opportunity to demand practically what he wanted as a bonus in accepting payment in silver. The discontinuance of the coinage of silver and the increased coinage of gold are expected to remedy this condition.

TOTAL OF SILVER COINS IN CIRCULATION.

[From Supplement to Commerce Reports, Trade and Economic Review for 1921, No. 20.]

A Mexican treasury report of the first week of June, 1921, gives the total of silver coins in circulation throughout the Republic as 39,645,000 pesos, an estimate of 2.64 pesos per capita.

BRITISH HONDURAS.

The amount of domestic silver coin withdrawn from monetary use for recoinage during the year ended December 31, 1922, was \$139.

The amount of silver coin and Government notes in circulation on December 31, 1922, was as follows: Silver coin, \$64,725; Government notes, \$340,491.

The amount of silver coin exported to the United States during the year 1922 was \$10,000.

BRITISH WEST INDIES.

(Jamaica, Leeward Islands, Windward Islands, Barbados, Trinidad, British Guiana.)

CURRENCY.

[From Consul General Robert P. Skinner, London, July 6, 1923.]

There is no gold in circulation. The token silver coins of Great Britain are unlimited legal tender. In the Turks and Caicos Islands £1 notes are issued by the local government. In Jamaica treasury £1 and 10s. notes have been made legal tender. Apart from these colonies, the highest units of legal tender in ordinary circulation are the 10s. and 5s. notes and the \$2 and \$1 notes issued by the colonial governments. There is no unit of legal tender in Barbados or St. Vincent higher than British silver. In all the colonies, except Jamaica, Antigua, and St. Lucia, the money of account for commercial purposes is reckoned in dollars of 100 halfpence, while the legal tender currency in circulation (except for the dollar notes in Trinidad and in British Guiana) is sterling. In all the colonies, except Jamaica, dollar notes issued by the banks circulate side by side with the sterling legal tender silver and bronze. In the case of the Leeward Islands, Grenada, and St. Lucia dollar notes issued by the banks circulate side by side with sterling notes. In the Turks and Caicos Islands there are no bank notes. Colonial government notes circulate and are redeemable only in the colony in which they are issued. The notes issued by the banks circulate throughout the colonies where the issuing banks have branches.

The total amount of silver coin in circulation is assumed to be £1,250,000, of which £150,000 has the new millesimal fineness of 500.

The note circulation on January 1, 1923, was as follows: Government notes, £361,559; Colonial Bank notes, £492,946; Royal Bank of Canada notes, £370,232; Canadian Bank of Commerce notes, £36,613; Bank of Nova Scotia notes, £51,173; total, £1,611,559.

A proportion of the note guarantee fund (now usually fixed at one-third) is required to be kept in coin. No provision is made for the constitution of such a fund in the Leeward Islands, in Grenada, and St. Lucia.

BAHAMA ISLANDS.**CURRENCY.**

[By Consul Lorin A. Lathrop, Nassau, February 1, 1923.]

By the currency note act of December 18, 1919, as amended by the currency note amendment act, 1920, the Bahama Government may issue its own notes up to £40,000, payable on demand in gold or silver at the option of the commissioners of currency. The Nassau branch of the Royal Bank of Canada will take the entire issue, paying for it in British shillings at face value or in British £1 notes. This reserve, under the act, must be maintained at two-thirds of the note circulation, but may be and probably will be ultimately reduced to one-half. The balance may be invested.

There is no mint in the islands and the circulation media are: By the act of 2 Victoria, cap. 4, British sterling (without limit as to legal tender of silver or copper). By the British Queen's proclamation of February 19, 1853, United States gold coins at \$4.87802 to the sovereign. By Governor Bayley's proclamation of April 6, 1864, United States silver at 2 shillings to the half-dollar. And by the British Queen's proclamation of September 14, 1838, Spanish, Mexican, and Colombian doubloons at £5 4s. each.

United States gold and silver certificates, though not legal tender, are accepted as United States gold. In practice, the British pound note, British silver, and American paper currency are the media, due account being taken of exchange variations.

Silver circulated as usual during the war and no law was passed except one forbidding export. The total face value of silver coins in the islands (all British coins) has been estimated at £45,000, of which two-thirds is normally in the hands of the bank. The imports of silver coin in 1921 amounted to £21,500.

SILVER CURRENCY.

[By Consul John J. C. Watson. Bridgetown, Barbados, February 1, 1923.]

Under the laws of Barbados, the entire metallic reserve of banks which do business in this colony may be in silver, which is legal tender in the British West Indies. Not more than 50 per cent of the bank reserves, however, are silver. Silver is taken at its face value. In the redemption of notes, silver is paid out dollar for dollar. No changes have occurred since 1914 in the laws governing the use of silver as reserve for notes.

British silver currency is used in the colony. The colonial government keeps its accounts in pounds, shillings, and pence, whereas the business houses keep theirs in dollars and cents. The unit is the shilling, weighing 80³/₄ fine grains. Silver was not withdrawn from circulation during the war. The public has always used silver freely and there has been no change in its attitude toward silver since the war. There has been no agitation for the adoption of bimetallism. There are about \$400,000 of silver coins in circulation in the colony.

COLONY OF BERMUDA.

CURRENCY.

[By Edwin Clay Merrell, vice consul in charge, Hamilton, Bermuda, January 25, 1923.]

The colony of Bermuda uses the silver coin of Great Britain as well as other currency, has no coinage of her own, and with the exception of the issuance of 28,000 notes of £1 denomination during the period from 1915 to 1917, has never issued currency. These notes are still in circulation and are covered by investments made by the colony in England.

TRINIDAD.

CURRENCY.

[By Consul Henry D. Baker, Trinidad, March 15, 1923.]

Practically all metallic reserves used in the colony of Trinidad and Tobago are of silver coin. In March, 1920, permission was obtained to reduce the proportion

of reserve in coin from one-half to one-third for a period of three years, and a new ordinance has just been drafted locally to provide for renewal for another three years.

The total amount of notes in circulation on January 9, 1923, was \$716,040; and the amount on hand fit for circulation was \$1,975,024. The average amount of coin proportion, understood to be all silver, during the month ending December 11, 1922, was \$239,040.

The coin in circulation is almost exclusively British silver and bronze. Both the old and new silver coins (0.925 and 0.500 fine, respectively) are circulating, the proportion of old coins to new being probably 5 to 1. But in course of time most of the silver coins circulating should be those of the lesser fineness, as it is the policy of the local banks, whenever shipping coins to England, to ship the old coins.

In addition to the British sterling silver currency, bronze penny and half-penny pieces, and the Government currency notes in denominations of \$1, \$2, and \$1,000, there are three banks, the Colonial Bank, the Royal Bank of Canada, and the Canadian Bank of Commerce, authorized to circulate their own notes, which is done in denominations of \$5, \$20, \$50, and \$100.

LAWS AFFECTING THE CURRENCY.

[From Federal Reserve Bulletin, December, 1922.]

A law which was passed by the National Congress on May 17, 1922, provided for the unification of the paper currency, including the Government silver certificates, and the withdrawal from circulation of the notes of the Banco Comercial which failed

in 1914 and whose notes were subsequently guaranteed by the Government. According to this law the Banco Internacional de Costa Rica is authorized to increase its emission by 4,282,250 colones, with the object of retiring from circulation the notes of the Banco Comercial and the silver certificates of small denominations. The idea is to give the Banco Internacional the sole right of issue, declaring its notes legal tender. The bank will retire 4,282,250 colones in Government silver certificates and notes of the Banco Comercial, replacing the canceled notes with those of its own issue and receiving the silver deposit of 727,334 colones from the Banco de Costa Rica.

The note circulation of the country will then be reformed as follows:

	Colones.
Banco Internacional notes.....	14, 161, 434

DOMINICAN REPUBLIC.

Estimated stock of gold and silver and bank notes used for monetary purposes on December 31, 1922: Gold, \$250,000; silver, \$500,000; notes, \$2,500,000.

The general medium of exchange, except for coins of 20 cents (gold) or less, is United States money—coins and currency. Even in coins of small denomination the United States coins are seen as frequently at least as the native coins.

CURRENCY—EXPORT OF SPECIE.

[By American Vice Consul in Charge Charles Bridgham Hosmer, Santo Domingo, January 25, 1923.]

There is no metallic reserve in the Dominican Republic, although in 1905 the currency of the United States was adopted as the legal currency of this Republic.

Two special laws were passed in 1889 and 1894 authorizing the coinage of considerable amounts of silver dollars and fractional currency. A considerable number of these coins are still in circulation, and upon the adoption of American currency they were assigned a legal equivalent thereto, which is still in force: Dominican peso=\$0.20 American currency, half peso=\$0.10, fifth peso=\$0.04, tenth peso=\$0.02, 5-cent coin=\$0.01, 2½-cent coin=\$0.005.

All other money in circulation in the Republic is American currency at its face value.

There was no change in the monetary system during the war, and the only withdrawal of silver currency from circulation resulted from the exportation by the Dominican Government of Dominican silver coins in order to obtain the benefit of the then high bullion value, 424,000 pesos in 1918 and 41,800 pesos in 1920.

There is no agitation whatever for a change in the present currency system, which is very satisfactory. Silver money is not favorably regarded except for fractional currency. Many Dominicans, particularly in country districts, hoard gold money in secret places in the earth, walls, caves, etc., and will pay a premium of 1 to 6 per cent to obtain it. Practically all gold coin is of United States coinage.

The Dominican treasury department believes that there is about \$500,000 in Dominican silver still in circulation. This does not represent over one-fifth of the silver coins in use, and probably less.

FRENCH WEST INDIES.

GUATEMALA.

COINAGE OF FRACTIONAL CURRENCY—PRESENT CURRENCY.

[By Consul Arthur C. Frost, Guatemala, September 25, 1922.]

To remedy the scarcity of small change, the Government has directed the coinage of coins of 50 centavos, 1 peso, and 5 pesos by the mint. At the present time the only currency in circulation in Guatemala city is paper money, the smallest denomination being the 1-peso bill, worth approximately \$0.02. The fractional currency of the peso, 12½ and 25 centavos, has practically disappeared from circulation, and postage stamps have to be used for transactions involving a fraction of the peso.

HAITI.

Approximate stock of gold and silver coin, also of paper money, used for monetary purposes on December 31, 1922.

Character of stock.	In home government treasuries.	In circulation.	Total used for monetary purposes.

Notes of banks of issue.....	<i>Gourdes.</i> 8,838,470		
United States equivalent.....	\$1,767,694		

Haiti has no gold or silver currency. The actual currency consists of gourdes at a stable rate of 5 gourdes for 1 dollar.

The export of silver coin to the United States during the year 1922 was \$168,000.

CURRENCY.

[By Robert Dudley Longyear, vice consul in charge, Port au Prince, Haiti, January 23, 1923.]

There is no silver currency in Haiti other than the small amount of United States money current at the rate of 1 dollar to 5 gourdes. The Banque Nationale de la République d'Haiti, the bank issuing Haitian notes in denominations of 1, 2, and 10 gourdes, is a branch of the National City Bank. The issuing bank maintains the exchange at the rate of 5 gourdes to 1 dollar, and guarantees its issue of notes by a reserve of one-third United States gold coin and Treasury notes, and two-thirds commercial paper.

There was a silver currency in Haiti during the presidency of Salomon, 1879 to 1888, but due to the issuing of paper money without proper reserves this silver money, the content of which was about 96 cents American money to 1 gourde, was retired by the operation of Gresham's law and has long since been out of current use.

The bank notes in circulation at the present time total about 9,000,000 gourdes, guaranteed by the reserve of gold and commercial paper above mentioned. The highest circulation, nearly 11,000,000 gourdes, was reached during the trade expansion following the armistice in 1919 and 1920, and the low point occurred last year, 1921, and early 1922, the total money in circulation then being about 6,500,000 gourdes.

Decimal fractions of gourdes are taken care of by a nickel currency issued in 5, 10, 20, and 50 centime pieces, and by bronze coins of 1 and 2 centimes, which are very seldom used.

RETIREMENT OF PROVISIONAL BANK NOTES OF HAITI.

[By Vice Consul R. D. Longyear, Port au Prince, October 20, 1922, in Commerce Reports, November 27, 1922.]

The provisional currency of the Banque Nationale de la République d'Haiti of the denominations of 1 and 2 gourdes are ordered to be retired in favor of other paper money called "definitive notes," by virtue of an executive order of the president of Haiti, dated October 14, 1922. The bank must present for destruction notes to the value of at least 250,000 gourdes per month. The new notes are to be emitted after the provisional notes have been officially destroyed.

HONDURAS.

The amount of domestic silver coin withdrawn from monetary use and exported to the United States during the year 1922 was \$15,000.

The quantity of gold and silver produced from deep mines and exported to the United States during the year 1922 was as follows: Gold, 4,357 fine ounces; silver, 1,449,899 fine ounces.

REPORT OF THE DIRECTOR OF THE MINT.

Premium on gold in 1922: Highest, 220 per cent; lowest, 206 per cent; average, 210 per cent.

MONETARY STATISTICS.

[By Consul Robert L. Keiser, Tegucigalpa, February 6, 1923.]

USE OF SILVER AS METALLIC RESERVE FOR NOTE ISSUES.

The Government of Honduras does not issue paper currency. Two domestic banks, the Banco de Honduras and the Banco Atlantida, are banks of issue. The former is required by its concession to maintain 40 per cent of its paper circulation amount in silver as a reserve; the latter maintains as a reserve 50 per cent of its paper circulation in American currency of any description. The Bank of Honduras is required to redeem up to its full paper issue in silver on demand. All paper issue of the Banco Atlantida bears a statement that it will be redeemed upon demand at 50 per cent of its value (the legal ratio) in American paper or metal currency. On January 24, 1919, the Government decreed American paper and metal currency to be legal tender with a comparative value of 200 per cent of the value of Honduras currency.

SILVER WITHDRAWN DURING THE WAR.

The metal currency of Honduras carries a small gold content, a peculiarity of most of the silver mined in the Republic. With the demonetizing of silver currency in some of the neighboring republics and the subsequent high price of silver for bullion purposes the exportation of silver coins of Honduras became a very profitable business. It is estimated that 90 per cent of the native metallic currency was exported prior to 1920, resulting in an influx of Nicaraguan and Guatemalan silver currency. Although a small amount of the Honduran currency, probably 15 per cent, eventually returned, most of the silver in circulation to-day is Guatemalan.

RETURN OF SILVER INTO CIRCULATION.

With the subsequent drop in silver price, the Government having in January, 1919, stabilized silver currency at 2 to 1 for gold, the country found itself faced with a rapidly increasing circulation of the cheaper central American silver to the disadvantage of American currency as a circulation medium. To prevent an undesirable valorization of the dollar, the importation of silver currency other than that of the United States was prohibited while the exportation of all other than United States silver was exempted from all customs duties. In the northern half of the Republic, which is under American influence, silver other than American has practically disappeared from circulation; while in the south Guatemalan, Honduran, and Nicaraguan silver continues in use as the principal metal currency. It is estimated that between 150,000 and 200,000 pesos in Central American silver coins are actually in circulation in Honduras, and United States silver coinage in circulation is probably not less than \$150,000.

Notes of banks of issue ¹				

¹ Of the above, \$5,578,484 is held as reserve stock.

Premium on gold in 1922: Highest, 2 per cent; lowest, nil; average, 1 per cent.

The exports of gold and silver to the United States during the year 1922 were as follows: Gold coin, \$215,312; gold bullion, \$1,065,733; silver bullion, \$277,185.

CURRENCY.

[By Consul Harold Playter, Corinto, March 13, 1923.]

Since 1911 silver has not been used in Nicaragua as a reserve for note issues. In 1912 a national bank was established with a gold reserve, and the old silver currency, amounting to about 48,000,000 pesos, having a nominal value of 50 cents gold to the dollar, was converted at 12 to 1. The cordoba, the new monetary unit, was made equal to the dollar.

The greater part of the money in circulation, 2,538,615 cordobas at the end of February, 1923, is paper, the bills above \$1 being of the same denominations as those in the United States, with fractional bills of 50, 25, and 10 cents. The total amount of metal in circulation is 194,691 cordobas, 88,715 cordobas being in nickels, copper cents, and half-cents, the balance of 105,876 cordobas, being the total amount of silver in circulation. Apparently the paper is preferred. Very few silver cordobas are seen. The fractional pieces, especially 10-cent pieces, are more plentiful.

The export of silver bullion in 1921 was 11,457 cordobas. The silver exports in 1922 consisted of 305,772 cordobas in bullion and 1,953 cordobas in coin, chiefly from the United States.

GOLD AND SILVER EXPORTED DURING 1921.

[From Commerce Reports, September 25, 1922. By Consul Thomas W. Waters, Bluefields.]

All the gold and silver exported from Nicaragua during 1921 went to the United States. The shipments comprised: Gold—amalgam, \$284,732; bars, \$44,449; concentrates, \$615,828; dust, \$44,964. Silver—amalgam, \$11,467; concentrates, \$257,006. The curtailment or suspension of operations in several mines and the general decrease in gold-washing activities have caused lower production of gold than in previous years. The present trend of conditions in this district is toward a still further decrease for the year 1922.

PANAMA.

Panama has no gold coin and very little silver in circulation. The silver stock of the banks on December 31, 1922, amounted to \$66,327.

There is no premium on gold.

¹ In addition to above some small amount of ore and coins were smuggled out of South American countries and brought into Panama, of which, however, there is no record.

² The above includes money from the following countries: England, Peru, Colombia, Mexico, France, Ecuador, Venezuela, Italy, Australia, Canada, Chile, Spain, Cuba, Belgium, and Japan.

SALVADOR.

The amount of United States gold coin imported during the year ended December 31, 1922, was \$1,100,000.

Gold and silver production during 1922: Gold in bars, 59 kilos (1,897 ounces), valued at \$9,844; alloy gold in bars, 86 kilos (2,765 ounces), valued at \$2,181; unrefined gold, 2,896 kilos, (93,106 ounces), valued at \$1,208; silver in bars, 305 kilos (9,806 ounces), valued at \$7,419; silver sweepings, 512 kilos (16,461 ounces), valued at \$276.

The stock of (United States) gold coin and notes in circulation of the three banks of issue (Banco Salvadoreño, Banco Agrícola Comercial, Banco Occidental) on December 31, 1922, was as follows: Gold, 3,145,150 colones (\$1,572,575); notes, 9,381,446 colones (\$4,690,723).

Premium on gold during 1922: Highest, 2.07 colones for 1 dollar; lowest, 2.

Exports of silver coin during 1922: United States coin, \$55,000; domestic coin, \$49,521.

VIRGIN ISLANDS.

The amount of gold coin withdrawn from monetary use for industrial use during the year 1922 was as follows: Domestic coin, 2,680 francs (\$517); United States coin, \$2,000.

The highest premium on gold was quoted on January 27, 1921, when it required 254 pesos paper to purchase 100 pesos gold.

Since 1914 the conversion privilege has been withdrawn and the exportation of gold prohibited.

BOLIVIA.

CURRENCY.

[By Consul D. C McDonough, La Paz, March 4, 1923]

The law requires the reserve for note issues to be in gold and equal to 40 per cent of the notes issued.

Bolivia has never had any gold coin. There is a limit of 4,000,000 bolivianos placed upon the amount of silver coin which the Government may coin. In practice silver is not being coined and only nickel money is in circulation. Since 1914 on account of the rise in the value of silver bullion, nearly all of the silver coins of Bolivia have been exported, largely to Peru and Argentina. The Government did not try to withdraw this money from circulation and did not attempt to prevent it from being exported.

Bank notes and nickel coins were substituted for silver coins. The bank notes are in denominations of 1, 5, 10, and 20 bolivianos, and larger notes. The public appar-

ently was indifferent to this change. There appears to be no plan or movement toward the restoration of silver as a circulating medium. The circulation of silver is limited to a very few old 5 and 10 centavo pieces. The banks have very little silver in their vaults. The Banco de la Nación Boliviana has silver coins amounting to 31,117 bolivianos. The reserve of the banks of issue is all in gold, principally in pounds sterling and dollars. The only bank of issue is now the Banco de la Nación Boliviana, but the Banco Nacional de Bolivia and the Banco Mercantil formerly had the right to issue notes and still have bank notes in circulation.

Note circulation and gold reserve of the banks of issue on December 31, 1921 and 1922.

COLOMBIA.

PLANS TO RELIEVE COLOMBIAN CURRENCY SITUATION.

[By Consul E. C. Soule, Cartagena. In Commerce Reports, March 20, 1922.]

... The Colombian Congress on February 4, 1922, approved the issuance of \$6,000,000 in paper money . . . to meet the financial embarrassment of the National Government. . . .

Another means of expanding the currency was adopted when the Colombia Ministry of the Treasury signed a contract with an American company in New York, by which the latter has agreed to furnish the Colombian Government with 3,000,000 silver coins of the denomination of 50 centavos Colombian currency, 0.900 fine.

COINAGE.

The United States Mint at Philadelphia coined in 1922 3,000,000 half-peso silver pieces for Colombia.

ECUADOR.

MONETARY STOCK ON DECEMBER 31, 1921—BANKS OF ISSUE.

[From Supplement to Commerce Reports, Trade and Economic Review for 1921, No. 41.]

On December 31, 1921, the banks of Ecuador held 9,502,428 sucres, gold (\$4,624,832), and 3,967,422 sucres, silver (\$1,930,944), in metallic currency, while their notes in circulation amounted to 16,136,616 (\$7,853,691). Some 3,700,000 sucres (\$1,800,790), gold, and 3,200,000 sucres (\$1,557,440), silver, are nominally still in the hands of the public, but since 1914 have been practically out of circulation and it is believed that they have left the country. To replace the silver, the Government coined over a million nickel sucres at a considerable profit.

Up to 1922, there were but four banks of issue in the country, viz, El Banco del Ecuador, El Banco Commercial y Agrícola, El Banco de Pinchincha, and El Banco de Azuay. The first two, which are established in Guayaquil, the commercial center of the country, participated in the conversion to the gold basis and are the principal dealers in foreign exchange. The Pinchincha Bank, in Quito, is the most important as a note-issuing agency, but does not have the foreign trade interests of the first two. The only notes which may circulate in Guayaquil are those of the three banks in that city. Of late Banco del Ecuador has not been exchanging its notes for those of the Banco Commercial y Agrícola and keeps separate accounts for deposits made with this medium. The reason given is its lack of confidence in the security of these notes, which are said to be greatly in excess of the bank's reserves.

Gold and silver production in 1921.

[U. S. Geological Survey.]

Gold, \$738,000; silver, 66,000 ounces.

GUIANA—BRITISH.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1922, was as follows: New gold bullion, 5,000 British Guiana dollars (\$5,069); new silver bullion and domestic silver coin, 1,000 British Guiana dollars (\$1,014) each.

The quantity of gold produced from placer mining during 1922 was 10,877 fine ounces, valued at 204,543 British Guiana dollars (\$207,366).

Approximate stock of silver coin and paper money used for monetary purposes on December 31, 1922: Silver coin, 1,500,000 British Guiana dollars (\$1,520,700); Government notes, 500,000 British Guiana dollars (\$506,900); notes of banks of issue, 1,700,000 British Guiana dollars (\$1,723,460).

Premium on gold for 1922: Highest, 4,300; lowest, 4,000; average, 4,000.

NEW PARAGUAYAN CURRENCY IN CIRCULATION.

[By Consul Harry Campbell, Asuncion, October 4. In Commerce Reports, December 11, 1922.]

The issue of the new paper currency provided for by law No. 463 of December 30, 1920, and contracted for in the United States, began during the past week with the placing in circulation of 420,000 notes. The total emission consists of 6,900,000 notes of 5, 10, 50, 100, and 500 peso denominations, with a total value of 180,000,000 paper pesos. This issue will be used gradually to redeem all of the old paper currency now circulating.

¹ Estimate.

The actual currency consists of notes of the bank of issue, subsidiary silver, nickel, and copper coins.

Premium on gold in 1922: Highest quotation, \$4.25 to the Peruvian pound; lowest, \$3.30; average, \$3.80.

In addition to the metallic currency, Peru also has a paper circulation, issued by a central bank, modeled after the Federal Reserve System, the law providing for a gold reserve of at least 50 per cent against all outstanding notes, and the remainder of the reserve up to 100 per cent to be composed of commercial paper. Actually the gold reserve is 93 per cent. The paper of the reserve bank (Banco de Reserva de Peru) constitutes the principal circulating medium of Peru.

The exports of gold and silver bullion during 1922 were as follows: Gold, 2,789 fine kilos (89,666 ounces); silver, 431,205 fine kilos (13,863,241 ounces).

INCREASED SUBSIDIARY COINAGE.

[By Acting Commercial Attaché W. E. Dunn, Lima, October 18. In Commerce Reports, December 4, 1922.]

Authorization for an increase in the coinage to the amount of 23,000,000 soles (about \$11,000,000) as subsidiary currency is given by law No. 4527 of the Peruvian Government passed September 28, 1922. Of this amount 7,045,932 soles is to be used for the exchange of the circular checks of 1 sol and for certificates of gold deposits of 50 centavos issued by the Junta de Vigilancia, which has been superseded as a bureau of note issue by the new reserve bank of Peru. The remaining 15,954,068 soles will be used to take the place of the silver coins of the fineness of 0.9 that remain in circulation.

REDUCTION OF THE SILVER CONTENTS OF SUBSIDIARY COINS.

[From bullion letter of Samuel Montagu & Co., November 16, 1922.]

The reduction of the silver contents of subsidiary coin has now commenced in the South American Continent. A recent law passed by the Peruvian Congress authorizes the emission of 23,000,000 soles of a low standard. Hitherto the quality has been 900 parts in the thousand fine. The object is to replace the 15,954,068 soles in circulation, and also to redeem 7,045,932 soles of currency outstanding in cheques and certificates. The reduction of the quality from 0.900 to 0.600 would have more than sufficient profit for the purpose.

[By Acting Commercial Attaché W. E. Dunn, Lima. In Commerce Reports, October 2, 1922.]

The national mint of Peru has been authorized to purchase silver soles of the legal nine-tenths weight for conversion into light coins. All holders of such coins are obliged to sell them to the mint at £P4.5 per kilo. The melting and exporting of Peruvian coins remains illegal.

URUGUAY.

[From Bulletin of the Pan American Union, February, 1923.]

Gold reserve of Bank of the Republic on October 31, 1922: 54,927,557 pesos (\$56,806,079).

VENEZUELA.

The silver coinage executed at the Philadelphia Mint in 1921 consisted of 500,000 five-bolivar pieces having a face value of 2,500,000 bolivars (\$482,500).

The quantity of gold produced in 1921, as gathered from the invoices of merchants exporting gold, was as follows: From deep mines, 333 fine kilos (10,706 ounces), valued at 993,427 bolivars (\$191,731); from placer mining, 608 fine kilos (19,547 ounces), valued at 1,767,130 bolivars (\$341,056).

The Ministry of Finance states that in regard to the gold money shipped to the United States, the high price of exchange was the cause of a considerable secret exportation of coined gold which is estimated at about 30,000,000 bolivars (\$5,790,000).

It appears that there are few national gold coins in the country as they have mostly been exported and most of the gold money in Venezuela is of American origin.

GOLD AND SILVER COINAGE.

In addition to the 500,000 five-bolivar pieces above-mentioned as having been coined at the Philadelphia Mint in 1921, the same mint made for Venezuela in 1921, half-bolivar silver pieces, totaling 600,000.

[From Bulletin of the Pan American Union, Washington, D. C., November, 1922.]

Congress has passed the law authorizing the coinage of 7,000,000 bolivars in silver and 14,000,000 bolivars in gold.

EUROPE.

ALBANIA.

While only gold and silver are in circulation throughout the interior of Albania (in the coast towns Italian and Greek paper currency is also used), the Government of Albania is not yet sufficiently well organized to furnish any definite statistics.

The American Legation obtains its gold by selling drafts and checks to the merchants at Durazzo.

NEW BANK OF ISSUE.

[From Moniteur des Intérêts Matériels, Brussels, November 13-14, 1922.]

According to the statutes of the new bank of issue, its capital will be 30,000,000 gold crowns, and not Swiss francs. One half of this amount will be paid up upon the establishing of the bank, and the balance within an interval of six months. The project of State guarantee is abandoned. The board will consist of 14 members, 9 of whom, at least, will be Austrians. The State will not appoint any administrator. The Anglo-Austrian Bank and the bank of the Austrian countries will not be specially represented. The cover of the fiduciary circulation will have to be 20 per cent the first year; 24 per cent the second; 28 per cent the third; and then, 33½ per cent until the resumption of payments in specie. The bank will have to keep 25,000,000 deposited in the principal establishments of Europe and America. The privilege of the bank holds 20 years and may be renewed. The shareholders are entitled to a first dividend of 8 per cent on the yearly profits; the State reserves to itself from two-thirds to three-fourths of the surplus.

[From Commerce Reports, January 15, 1923.]

The new national bank was established on January 1 following the receipt of subscriptions to its entire capital of 30,000,000 gold crowns from Austrian banks. The bank took over the business and liquidation of the Austrian section of the Austro-Hungarian Bank on this date and is using the equipment and currency plates of the former bank temporarily.

The guaranty of an international loan for 650,000,000 gold crowns has been ratified by Great Britain, Italy, Czechoslovakia, and France.

AZORES ISLANDS.

CURRENCY.

[By Consul Drew Linard, St. Michaels, Azores, February 9, 1923.]

No silver currency is in circulation, nor is any metallic reserve maintained in the banks of the Azores.

About 10 years ago the Portuguese Government called in all silver currency in circulation but paid no premium thereon, issuing paper notes in lieu thereof, and prohibiting the circulation of silver.

Although local banks are not allowed to handle silver currency, this money now has a premium of about 300 per cent, which amount is paid by individuals dealing in money transactions.

Silver is never paid out in the redemption of notes because there is no metallic reserve, and no changes have taken place since 1914 in the laws or practices governing the use of silver as reserve for note issues.

The only substitutes used for silver coin withdrawn from circulation were paper notes, and the public paid little attention to this measure. No silver has been restored to circulation and the Portuguese Government has no apparent plans with respect to restoration.

BELGIUM.

The total import of United States gold bullion during the year ended December 31, 1922, was 80 kilos fine (2,572 ounces), valued at 843,790 francs (\$162,851).

The quantity of gold produced from deep mines in the Belgian colonies during the year ended December 31, 1922, was 2,364 kilos (76,003 ounces).

The total bank-note circulation on December 31, 1922, was 6,876,391,832 francs (\$1,327,143,624).

LAWS AFFECTING THE CURRENCY.

A bill issued December 31, 1921, authorized the issue of pure nickel 1-franc coins, to the extent of 73,000,000, to replace the 1-franc paper notes in circulation.

By law of July 12, 1922, the issue of 50-centimes "jetons-bons" by the Belgian treasury has been authorized.

SILVER CURRENCY.

[By Consul Graham H. Kemper, Sofia, March 8, 1923.]

There is no general law now in force governing the coinage of silver and no silver is being coined. As in most countries where the paper currency is greatly depreciated, silver entirely disappeared from circulation, probably sometime in 1918. This was brought about partly by the Germans, who shortly after their arrival in Bulgaria began collecting silver coins. Then the peasants began hoarding both gold and silver. The Government took no action toward withdrawing gold and silver from circulation. It disappeared solely as the result of natural economic laws. No embargo was placed on the export of silver until December, 1918.

With a view to increasing its metallic reserve the national bank on October 7, 1921, began purchasing silver from the people at the rate of 7 leva in bank notes for 1 silver lev. Later the price was raised to 9.60. This action of the bank was only moderately successful, and it is probable that there is still a considerable quantity of silver money in the hands of the people.

In 1916 large quantities of German paper marks were introduced into Bulgaria and for some time took the place of silver. In 1917 the Bulgarian Government began issuing paper money in denominations of 1 lev and 2 leva and has continued this practice up to the present time. The German paper quickly disappeared. Recently a law was passed authorizing the coinage of 20,000,000 two-leva aluminum coins and 40,000,000 one-lev pieces. These are intended to supplant paper notes of small denomination now in circulation.

CZECHOSLOVAKIA.

GOLD AND SILVER PRODUCTION IN 1922.

[From the Mining Journal, London, April 28, 1923.]

In 1922 some 300 kilos of gold were obtained from Czechoslovakia's mines—200 from those at Roudny and 100 from those at Stavnica, which are in the possession of the State. The average price of gold during 1922 was 22,000 crowns per kilo. The silver mines at Příbram produced 25,000 kilos of silver and those of Stavnica and Kremnice upward of 3,000. The price of silver was about 800 crowns per kilo.

NEW GOLD COIN FOR COMMERCIAL PURPOSES.

[From The Economist, London, November 11, 1922.]

In the financial committee of the Czechoslovak Parliament, Doctor Rasin, the Minister of Finance, announced the intention of the Government to introduce a new gold coin, which would be used for commercial purposes and sold on the financial market in accordance with the price of gold. It is, however, impossible to introduce the gold currency for general use, because under present conditions such a currency would inevitably be conveyed over the frontiers to the detriment of the Czechoslovak finances.

[From Edelmetallhandel im Jahre 1922, Jacob & Scheidt, Berlin, 1923.]

The proposed gold ducat will be merely a trade coin of the same weight and fineness as the Austrian ducat (gross weight 3.49 gr.; fine weight, 3.44 gr.).

ATTEMPT AT STABILIZING THE CURRENCY.

[By Trade Commissioner V. A. Geringer, Prague, Jan. 13, 1923. In Commerce Reports, March 5, 1923.]

Czechoslovakia has again set up a very stringent control of foreign exchange in order to curb speculation in crowns which broke out with the unsettled European political situation. This action was deemed necessary only after the Banking Office had expended over a billion crowns of its holdings of foreign currencies to stabilize the exchange. Since the establishment of the exchange control in the middle of January, a very considerable amount of this currency has been repurchased and the crown has, apparently, been stabilized at about 33 to the dollar.

Every foreign exchange transaction now comes under Government control as in the original law, and any later modifications have been repealed. Generally speaking, purchases and sales for arbitrage are forbidden, except with the express consent of the Banking Office. In these cases the proceeds of the transaction must be turned over to the Banking Office.

DANZIG, FREE CITY OF.

CURRENCY.

[By Consul Charles H. Albrecht, Danzig, February 1, 1923.]

No silver currency has been in use in the Free City of Danzig since the establishment of the free city by the treaty of Versailles. The currency of Danzig has been up to the present time, the German paper mark. The German Reichsbank has a Danzig branch which issues currency to the local banks. The reserves and the laws and regulations in regard to this currency are consequently the same as in Germany.

Danzig has recently issued a few millions of emergency currency in German mark values in conjunction with the Reichsbank in order to satisfy the local demand for ready money.

There has been some discussion recently in local business circles either to establish a new Danzig currency or to adopt one of the stronger foreign currencies to abolish the difficulties now experienced with the constantly fluctuating German mark. No legislative action has, however, taken place in regard to the change of currency.

FIUME, FREE STATE OF.**CURRENCY.**

[By Consul Wilbur Keblinger, Fiume, January 26, 1923.]

The so-called Free State of Fiume has no currency of its own, the Italian paper lire having been in use exclusively for the past three years. Directly after the armistice Hungarian kronen were stamped for use in Fiume and are known as "Fiume kronen." Millions of these paper kronen are in the banks of Fiume awaiting redemption when Fiume establishes a monetary system of its own or when some foreign currency is adopted as the legal medium.

No silver money is current in Fiume.

FRANCE.**USE OF SILVER AS CURRENCY.**

[Mr. Chester Lloyd Jones, American commercial attaché, Paris, France, in reply, dated July 19, 1923, to questionnaire on silver currency.]

The basic law of the monetary legislation of France is that of the seventeenth germinal year XI. This law made the actual currency correspond to the currency of account. It established 5 grams of silver, nine-tenths fine, as the monetary unit under the name of the franc. Silver was thus made the basis of the national circulation, though not the only currency. Gold, silver, and even copper were made legal tender in unlimited amounts. The relation of gold to silver was fixed at 1 to 15½.

Though the general provisions of this law still obtain, its principles, so far as they refer to the money standard, have been completely changed. A large number of modifications have taken place in the sizes of the coins, and the fineness thereof has also been subject to variations. In principle, it still remains true that coinage of gold and 5-franc silver pieces is free. In practice, the silver 5-franc piece is no longer coined. A law of August 5, 1876, sponsored by the then Minister of Finance, M. Leon Say, authorized the Government to limit or to suspend by decree the manufacture of 5-franc silver pieces for the account of individuals, and on November 5, 1878, the powers signatory to the Latin Monetary Union agreed not to coin them. The free coinage of silver in France thus disappeared, with the practical result that gold became the basis of the monetary system. Five-franc silver pieces are not now in circulation.

The coinage of fractional silver currency is also regulated. The fineness, weight, and amount of these coins have been matters of frequent discussion and adjustment in the Latin Monetary Union. The amount of fractional silver currency—2-franc, 1-franc, and 50-centime pieces or equivalents—to be coined by the various members of the Latin Monetary Union has been regulated by a number of agreements, the most recent (in 1913) of which, dated November 4, 1908, places the permissible coinage for France at 16 francs per capita. The number of inhabitants of France for this reckoning was placed at: France proper, 39,300,000; French colonies, including Algeria and Madagascar, 20,000,000. Under this agreement it was provided that the population basis agreed upon might be modified by means of common accord arrived at by diplomatic correspondence.

FRACTIONAL CURRENCY.

Two-franc, one-franc, and one-half-franc bronze-aluminum French coins struck in 1920, 1921, and 1922 totaled 301,615,194.50 francs in value. This is approximately one-third of the theoretical fractional currency circulation, 905,603,497 francs, at the end of 1922.

BRONZE-ALUMINUM COINAGE IN 1922.

(From Bulletin de Statistique, Paris, February, 1923.)

The total bronze-aluminum coinage executed in 1922 amounted to 213,381,681 francs.

[From bullion letter of Samuel Montagu & Co., London, February 14, 1923.]

The French Ministry of Finance, according to the Bankers' Trust Co., is of the opinion that the 300,000,000 francs in bronze-aluminum coins (face value 2 francs, 1 franc, and one-half franc) now in circulation will not be sufficient to meet the needs of commerce and industry. Their production, which now averages 25,000,000 francs a month, is to be continued until July, 1923. At that time there will be nominally 450,000,000 francs' worth in circulation. That amount is slightly higher than the amount of the silver money in circulation in France in 1914.

SILVER STOCK OF THE REICHSBANK AT THE CLOSE OF 1922.

[From Edelmetallhandel im Jahre 1922, Jacob & Scheidt, Berlin, 1923.]

The silver stock of the Reichsbank at the close of 1922 is slightly less than last year, when it amounted to about 900,000 kilos. Most of it is held abroad, mainly in the Netherlands. Its value in gold marks is from 72 to 78 million gold marks or 128.7 billion paper marks.

ATTEMPT AT STABILIZING THE MARK.

[From Bankers' Magazine, London, November, 1922.]

The German President has issued a decree, having the authority of law, which makes it a penal offense, punishable with three years' imprisonment, either to demand, offer, or accept payment in foreign currency in respect of business transactions in Germany, and imposes a similar penalty on bankers or upon their responsible employees who knowingly connive at purchases of foreign money for the purpose of speculation or investment. The object of the decree, which takes effect from October 13, is to stabilize the mark. The first article forbids transactions in Germany in foreign money unless a district revenue office has approved the deal. Exception is made in respect of certain banking firms in which the Government has confidence, and registered traders in possession of certificates from the chamber of commerce that their business necessitates the purchase of foreign money. The subsequent paragraphs provide generally that a banker must not sell foreign exchange to a person whom he does not know. In all cases in which an intention to defeat the law is proved, the foreign money concerned may be confiscated for the benefit of the imperial exchequer without regard to the sentence of fine or imprisonment, or both, which may be pronounced. The efficacy of these measures remains to be proved. The paramount importance of the decree lies in the fact that it constitutes the first genuine attempt on the part of the German Government to strengthen the mark, and thereby facilitate not only the payments which Germany must make for foreign food and raw materials, but also those for which the State is directly responsible under the treaty of Versailles.

VARIOUS METHODS OF CALCULATING VALUES.

[From bullion letter of Samuel Montagu & Co., London, April 4, 1923.]

An article by Mr. Jules Descamps in the *Revue de Paris* described the way in which the mark is being replaced by various methods of calculating values. Industrialists, for instance, find it advantageous to pay wages to some extent at least in kind, and leases and property change hands in prices calculated in goods. A quintal of coal is regarded as a currency unit in Hanover and Westphalia, whilst Oldenburg and Mecklenburg-Schwerin issue bonds reckoned in barley. He considers that these diversions from the use of the mark as money are but temporary expedients on the way to the adoption of a new gold standard, and that during the period of transition wholesale bankruptcies and other disastrous economic consequences may arise.

SILVER RESERVE.

[From bullion letter of Samuel Montagu & Co., August 10, 1922.]

United Kingdom silver coin to the amount of £7,000,000 is now held in the reserve against treasury currency notes. Should the time arrive when demand for silver coin shall exceed supply, the treasury could either coin more, or some of this silver holding could be retired by the substitution of Bank of England notes or by an increase in the amount of securities.

The Bank of England weekly return of the issue department inserts the designation "silver bullion" as the fourth form in which a portion of its reserve against its notes can be held. The Bank of England has power to hold one-fifth of the total value of its bullion in the issue department reserve in this metal, but the power has not been exercised since July, 1861. During the years 1844 (the year of the bank act) to 1853 silver was thus included, and occasionally afterwards.

It will be observed that for a long time past a sum of £7,434,900 has been held in "other securities," completing with the Government debt £11,015,100, a total of £18,450,000. The fiduciary issue at the time of the act of 1844 was £14,000,000. The bank was empowered to apply for order in council authorizing it to increase its fiduciary issue by two-thirds of the amount of bank notes of any bank authorized but ceasing to issue. The act does not specify what class of securities shall figure under the head of "other securities." The last joint-stock bank to issue notes was the Halifax Commercial Banking Co., which ceased to do so upon their amalgamation with the Bank of Liverpool and Martins (Ltd.) as from January 1, 1920. Some of the notes are still outstanding and possess the right of encashment.

WITHDRAWAL OF OLD SILVER COIN.

[From bullion letter of Samuel Montagu & Co., June 6, 1923.]

The deputy master of the royal mint thus alludes in his report for the years 1920 and 1921 to the exchange of old United Kingdom for new United Kingdom silver coin:

"During the war an enormously increased circulation of silver coin was required, and it is estimated that the amount in the United Kingdom at the passing of the 1920 act exceeded £60,000,000 or approximately double the pre-war circulation. It may be noted that between the passing of the 1920 act and the end of 1921, the amount of old silver coin received by the mint amounted to 11½ million pounds, while the amount of new coin issued was about 13½ millions, these figures including colonial withdrawals and issues. If allowance be made for the old silver likely to be returned from the colonies and dominions, by the end of 1921 a withdrawal of roughly one-sixth of the total old coin in circulation has thus been made by the mint."

Gold quotations in 1922.

ICELAND.

THE FIRST ICELANDIC COINS MINTED.

[By Consul George Nicolas Ifft, Bergen, Norway, December 2, 1922.]

The Bank of Iceland has had a quantity of silver 25-öre coins (at normal exchange 6.7 cents) struck off by the Royal Danish Mint. The coin is of the same size as the Danish coin of the same denomination, but bears on its reverse the inscription "Island 25 Aurar." This is the first coin ever minted by that Arctic State and is intended for home use only, and is not a legal tender in the Scandinavian lands, in spite of the fact that Iceland is a member of the Scandinavian Coinage Union. Up to the present time only Danish coins have been used in Iceland, while the Central Bank of Iceland had the right to issue notes which were a legal tender on the island only. With the recent separation from Denmark, by which the island has become independent, except that the King of Denmark continues to be King of Iceland, the island has entered upon a new era and will gradually have its own coinage and note issues.

During the past week steps have been taken by the Bergen Bourse for daily notations of the exchange value of the Icelandic crown as compared with Norwegian and other world units of value, and Bergen banks will undoubtedly soon be posting such notations.

IRELAND.

The amount of notes of banks of issue in circulation on December 31, 1922, was £6,354,494 (\$30,924,145).

The import of silver coin from Great Britain during the year 1922 was £15,300 (\$74,457).

CURRENCY.

[From The Statist, London, March 24, 1923.]

British currency—Irish bank notes and British treasury notes—in circulation in Ireland totals, approximately, £16,000,000.

Practically none of the new silver currency was introduced into Ireland. The silver coin held by the Irish banks and in circulation in Ireland is estimated at about £3,500,000.

The gold sent by the Irish banks to the Bank of England since 1914 in exchange for currency notes and currency note certificates probably amounts to about £6,000,000.

ITALY.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1922, was as follows: Gold, 5,000 kilos (160,750 ounces), valued at 60,000,000 paper lire; silver, 100,000 kilos (3,215,000 ounces), valued at 40,000,000 paper lire.

The quantity of silver produced from deep mines during the year 1922 was 12,000 kilos (385,800 ounces).

Premium on gold during 1922: Highest, 377.36 paper lire; lowest, 311.55; average, 355.03.

Imports into and exports from Italy of gold and silver during the period January 1 to September 30, 1922.

NEW COINAGE.

[From the Numismatist, Federalsburg, Md., November, 1922.]

It is reported from Geneva that the Republic of Latvia is abandoning the ruble in favor of the franc as its monetary unit. Orders have been placed with a Swiss medal manufactory for the coinage of 69,000,000 francs of nickel-bronze pieces in fractional denominations, 40,000,000 francs in 10 and 20 franc gold pieces, and 60,000,000 francs in silver coins.

GOLD COINAGE REGULATION PROMULGATED IN ACCORDANCE WITH THE LAW OF JULY 16, 1922, BY THE LATVIAN MINISTRY OF FINANCE.

[By U. S. Commissioner Evan E. Young, Riga, October 10, 1922.]

The Latvian money system is founded on gold. The money unit is the lat, which contains 0.2903226 of a gram of pure gold and is divided into 100 centimes. Gold money will be coined in denominations of 10 and 20 lat.

Gold money contains 0.900 pure gold, the admissible difference being 0.001 (0.899 to 0.901). The weight of 10 lats must be 3.225805 grams, the weight of 20 lats must be 6.45161 grams; the admissible difference in a 10-lat coin can be 0.003, but in a 20-lat coin only 0.002 of the above-mentioned weight.

The emission of gold coins is permitted in unlimited quantities, but small coins only at the rate of 10 lats per head of the population.

THE BANK OF LATVIA.

[From Federal Reserve Bulletin, April, 1923.]

Up to November 1, 1922, the Republic of Latvia had no official central bank of issue, the functions of such a bank being performed by the State Savings and Credit Bank. On November 1, 1922, this institution was liquidated and all its functions were taken over by the Bank of Latvia.

The Bank of Latvia is a State enterprise. Its purposes are to regulate the circulation of money, to promote industry, trade, and agriculture, to facilitate cash payments at home and abroad, and to act as fiscal agent for the Government.

The Bank of Latvia has the exclusive right to issue notes, which are legal tender and redeemable in gold upon demand. The notes outstanding are to be covered as follows: (1) Fifty per cent by gold or stable foreign currencies as long as the total amount of notes outstanding does not exceed 100,000,000 lats, the remainder being covered by prime short-term bills of exchange. (2) When it exceeds 100,000,000 lats, but does not exceed 150,000,000, the amount in excess of 100,000,000 lats is to be covered to the extent of 75 per cent by gold or stable foreign currencies, the rest by short-term bills of exchange. (3) Issues in excess of 150,000,000 lats must be fully covered by gold or foreign currencies.

CURRENCY.

[From annual report of the American Consulate at Riga, year ended December 31, 1922.]

On November 1, 1922, the lat, which up to that time was merely a standard of value, became the unit of a currency, and 500-ruble notes were issued stamped with a face value of 10 lats, redeemable in gold. Since that time copper and nickel coins denominated "centimes" have appeared in currency. In practice the lat does not enter commercial computations. Up to the present ruble currency remains in circulation, and prices in general are quoted in rubles. The emission of lat currency is under the control of the Bank of Latvia, which institution was created especially for that purpose, and consequently the notes emitted and the funds to guarantee the emission are items of the bank statement. The ruble, on the other hand, was emitted by the Government, through the Ministry of Finance. This currency is now a Government debt and such backing as it has is to be found in the gold reserve retained for that purpose, but distinct from the gold reserve of the Bank of Latvia. The exchange rate between the currencies is one lat equals 50 rubles. While the lat is nominally convertible into gold on demand, the ruble remains inconvertible. There seems to be no general disposition on the part of the public to call for gold redemption of the lat currency.

Lat currency: 20,230,000 lats secured by 200 kilos gold bullion valued at 688,889 lats, \$225,072 dollar currency valued at 1,159,121 lats, and £762,264 sterling currency valued at 18,065,647 lats.

Ruble currency: 2,400,000,000 rubles equal \$9,300,000 (at the present rate of exchange, 258 rubles to the dollar). It is stated that the Government possesses a gold fund valued at 13 million lats and foreign currency for 17.8 millions, a combined equivalent of \$5,980,500.

[From Commerce Reports, January 22, 1923.]

As yet the new lat currency has been introduced only in a small amount, the principal circulating medium continuing to be the ruble, the exchange value of which has for some time been substantially steady at between 250 and 260 rubles per dollar. One lat is exchangeable for 50 rubles. Up to November 14, the Bank of Latvia had put the new notes into circulation to the amount of 2,550,000 lats, and at that time the bank held American dollars and English pounds to the amount of 35,860,000 lats, gold to the amount of 14,000,000 lats, and stable drafts to the amount of 4,000,000 lats.

LITHUANIA.

The amount of foreign (Russian) gold coin withdrawn from monetary use for recoinage during 1922 was 3,018,558 rubles (\$1,553,350).

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1922.

NATIONAL CURRENCY.

[From Commerce Reports, July 24, 1922.]

The introduction of a national currency replacing the ost, or German, currency is meeting with much difficulty, owing to inability to come to terms with the German Government regarding indemnification for war damage and a basis for the withdrawal of the "ost" currency.

[By U. S. Commissioner Evan E. Young, in Commerce Reports, October 16, 1922.]

On August 9, 1922, the Lithuanian Constituent Assembly passed a law establishing a new monetary system instead of the German marks, which circulated in Lithuania under the name of "ost marks." The unit is called "lit" and its par value equals one-tenth of an American dollar. The lit is divided into 100 cents. Beginning October 1 (the day of issuance of the new paper lits) all transactions in Lithuania are to be calculated under the new currency. Other currency circulating in Lithuania (ost marks, ost rubles, and German marks) are to be changed into lits on or before January 1, 1923.

LITHUANIA TO HAVE BANK OF ISSUE.

[From The Commercial and Financial Chronicle, New York, September 30, 1922.]

The National Diet of Lithuania has passed a law authorizing the establishment of the Bank of Lithuania, "to be organized by the Ministries for Finance and Commerce for the purpose of creating a stable national currency." The bank is to have a capitalization of 6,000,000 lits, consisting of 60,000 shares of 100 lits par value, and will have the privilege of issuing bank notes until 1942, the date of the expiration of the charter. Of the total amount of notes in circulation, one-third is to be covered by gold, and the remainder by securities which have a ready market. The amount of shares held by individuals may not exceed 12,000. While foreigners may acquire shares in the bank, they are not to be elected to the directorate or management.

CURRENCY—NOTE CIRCULATION.

[By Consul Mason Mitchell, Valetta, February 10, 1923.]

The currency and coins of Malta are the same as those of England, although the notes issued by the Bank of England do not circulate to any great extent in Malta because they are not included in the currency in which legal tender may be made. Legal tender may be made in British treasury notes of the denominations of £1 and 10s., or in gold coins, to any amount. Silver coins are considered legal tender up to the amount of £10.

According to the report of the treasurer of Malta for 1921-22, the amount of British currency notes in circulation on March 31, 1922, was roughly estimated at £600,000.

POLISH CURRENCY EQUIVALENT OF GOLD FRANC.

[By Consul General Leo J. Keena, Warsaw. In Commerce Reports, October 16, 1922.]

The Polish Ministry of Posts and Telegraphs announces that, effective July 12, the Polish currency equivalent of the gold franc is fixed at 400 Polish marks for the purpose of computing telegraph tolls and mail and parcel-post rates. With the exception of Upper Silesia, the new currency equivalent is effective throughout Poland.

PORTUGAL.

The quantity of alloy gold and silver used in the industrial arts during 1922 was as follows: Alloy gold, 3,560 kilos (114,454 ounces); alloy silver, 25,113 kilos (807,383 ounces).

RUMANIA.

The estimated quantity of gold used in the industrial arts during the year ended December 31, 1922, was 200 kilos (6,430 ounces).

The quantity of gold and silver produced from the mines during 1922 was as follows: Gold, 1,336.9 fine kilos (42,981 ounces), valued at 148,813,903 francs (\$28,721,083); silver, 3,398 fine kilos (109,246 ounces), valued at 7,377,386 francs (\$1,423,835).

Approximate stock of gold and silver, also paper money, used for monetary purposes on December 31, 1922: Gold coin in domestic banks, 37,610,758 lei (\$7,258,876); gold bullion, 1,689,112 lei (\$325,999); gold held abroad, 493,735,430 lei (\$95,290,938); silver held abroad, 168,000 lei (\$32,424); national bank notes in circulation, 15,162,053,233 lei.

Premium on gold in 1922: The premium ranged from 570 to 720 lei per 20 lei gold piece.

During the year 1922 gold from the liquidation of the Austro-Hungarian Bank was imported as follows: July 8, 15,359,000 gold crowns (\$3,111,733); October 21, 21,900,000 gold crowns (\$4,436,940).

The quantity of gold and silver produced during the year ended December 31, 1921, was as follows: Gold, 1,288 fine kilos (41,409 ounces); silver, 3,000 fine kilos (96,450 ounces).

The total note circulation on December 31, 1921, was 13,722,231,453 lei.

Premium on gold: Highest, 206 lei per dollar; lowest, 57.60; average, 91.50.

The amount of gold bullion exported to Belgium during 1921 was 1,600 kilos (51,440 ounces), 0.700 fine.

GOLD STOCK.

[From the Mining Journal, London, March 3, 1923.]

It is announced that the Rumanian National Bank has received 68,000,000 gold marks, forming part of the 80,000,000 gold marks held by the German Reichsbank on behalf of Rumania, and that Bucharest intends to ask for the balance to be handed over shortly.

² 1,470 lei (francs) per kilo.

RUSSIA.

GOLD OUTPUT.

[From the Mining Journal, London, September 16, 1922.]

Discussing the official reports on the outlook for gold mining in the Lena region, formerly carried on by the Lenskoi Co. and now in the hands of the Lezoloto Trust, the "Ekonomitcheskaia Jizn" says that the maximum production expected to be reached gradually by 1926 is about 730 poods, which is equal to the pre-war figure. But, owing to the exhaustion of the rich ore, the production in six or seven years would not exceed 250 poods, or about the amount estimated for 1922. Development could then be continued with good results for a period of between 15 and 30 years, chiefly by dredging.

[From the Mining Journal, London, March 17, 1923.]

Gold output in 1922: 200 poods (107,200 ounces).

FAR EAST RUSSIA GOLD PRODUCTION.

[From the Mining Journal, London, May 19, 1923.]

In the last working year the production of gold by the Government combinations, Lansoloto and Ensoloto, has risen from 17 poods 15 funts to 200 poods 16 funts for the former and from 16 poods 26 funts to 32 poods 38 funts for the latter.

GOLD NOTES ISSUED BY SOVIET.

[From the Commercial and Financial Chronicle, New York, October 14, 1922.]

The Council of Commissars has authorized the issue of State bank notes which are to be called "tschervontzy," the ancient name for Russian gold pieces.

The new tschervontzy will be equal to 10 gold rubles, the notes to be in denominations of from 1 to 50. The amount issued will be guaranteed by gold, short-time notes, and goods.

ISSUE OF BANK NOTES.

[From Commerce Reports, October 16, 1922.]

With a view to increasing the operating means of the State bank without further increasing the emission of paper currency, the Soviet of People's Commissars has resolved to grant the State bank the right to issue bank notes of the face values of 100, 250, 500, and 1,000 rubles gold.

These bank notes will be secured to the extent of not less than one-fourth of their face value by precious metals and stable foreign currency at the rate of exchange for

gold, the balance to be guaranteed by goods easily to be realized, short-term bills of exchange, and other short-term obligations.

Data relative to the amount of bank notes issued and in circulation, as well as to their security, shall be published twice a month by the administration of the State bank. The date of exchange of such bank notes for gold is to be fixed by a special act of the Government.

These bank notes are to be taken at their face value in payment of taxes or any other obligation in all cases where, according to law, payment is to be made in gold.

THE NEW RUSSIAN CURRENCY.

[From The Economist, London, March 31, 1923.]

The Russian Soviet State Bank obtained the right, by a decree of October 11, 1922, to issue bank notes in terms of a new currency called "chervontsy." One "chervonetz" is said to contain "1 zolotnik and 78.4 doli" of pure gold, and is equal to 10 gold rubles, or slightly over 21s. gold. The notes issued are in denominations of 1, 2, 3, 5, 10, 25, and 50 chervontsy. A cover of 25 per cent of their face value is needed in precious metals or foreign exchange. These notes are redeemable in gold chervontsy, which do not yet exist.

At the beginning of its operations the issue department had at its disposal:

	Gold rubles.
Russian gold.....	2,000,000
Foreign gold.....	229,363
Bullion gold.....	1,835,916
Bank of England notes, £125,000 at 8.65 gold rubles per pound.....	1,081,250
Total.....	5,146,529

The latest returns available are those for February 16 last:

	Chervontsy.
Gold coin and bullion.....	1,246,466
Bank notes.....	2,725,000

[From Commerce Reports, July 23, 1923.]

Currency in circulation on January 1, 1923: 1,994,500,000,000 rubles of 1923 issue.

BOLSHEVIK CURRENCY EXPEDIENTS.

[From The Mining Journal, London, June 24, 1922.]

Since the beginning of May the value of the new paper ruble in Russia has been officially fixed at 10,000 old ruble notes. Toward the end of the month the Russian State Bank issued the foreign exchange equivalents based on the new issue, as follows: State Bank issued the foreign exchange equivalents based on the new issue, as follows: £1 sterling, 1,060 rubles; French franc, 21 rubles; United States dollar, 240 rubles; Swedish krone, 61 rubles; 100 German marks, 83 rubles. These are the official values, the free market quotations being considerably higher.

CURRENCY CONDITIONS.

[From the bullion letter of Samuel Montagu & Co., July 20, 1922.]

Striking evidence of the conditions under which business now is being conducted in Russia appear in a letter received from a representative in Constantinople of one of the largest English wholesale companies doing business in the Levant: "Our last venture was to send goods to Rostow, and we received in part payment: American paper dollars; American gold (small amount); American cheques (Near East express and others); American exchange (bankers); English notes and cheques; Turkish gold, cheques, and paper notes; French notes and cheques, and Russian gold rubles. Of the cheques not one was over £40 sterling and there were five different currencies and about as many different rates of exchange. We also had given to us wool, horsehair, pigs' bristles, and cement; and after these are sold we credit them with the difference."

UNIFICATION OF THE PAPER-CURRENCY SYSTEM IN RUSSIA.

[From Commerce Reports, October 23, 1923.]

The decree of the Council of Commissaries of June 28, providing for the withdrawal from circulation of all paper currency except the issue of 1922, has brought about a

large advance toward the unification of the Russian currency system. The great diversity of issues has been, at least to a large degree, the vicious part of the currency system. Theoretically, there were ten varieties of legal tender. The old currency issues will not only become unacceptable for payment or exchange after the specified date, but will lose entirely their validity as legal tender for any purpose whatever, regardless of any mutual understanding between private parties, which would be contrary to the letter and the spirit of the new law. While this violates the rule that old currency should be withdrawn only gradually, the deviation is fully justified by the small proportion of old currency now in circulation. At the beginning of this year the proportion of new currency in circulation was only 5.23 per cent, while at present it has reached 85 per cent of the total.

The Russian monetary system, nevertheless, still rests on the basis of a deficit. The problem of correcting the anomalies of the monetary system remains as acute as ever. One point at least is now made clear—that the problem can not be solved by technical means of financial order, and that the only basis for rehabilitating the financial system is the development of the productivity of Russian labor.

GOLD RESERVE ON JANUARY 1, 1922.

[From *Moniteur der Intérêts Matériels*, Brussels, October 4, 1922.]

The gold reserve was estimated on January 1, 1922, at 50,000,000 rubles (\$25,730,000).

STOCKS OF GOLD HELD BY THE SOVIET GOVERNMENT.

[From the bullion circular of Samuel Montagu & Co., October 12, 1922.]

The Soviet Commissar Preobrazhensky states in the *Pravda* that the total of Russia's gold reserves at the present time does not exceed 200,000,000 gold rubles (£20,000,000). Reliable authorities here calculate that the amount is considerably less; they estimate that on September 1 it was somewhere near 35,000,000 gold rubles (£3,500,000).

STABILIZING OF THE EXCHANGE RATE.

[From Bankers' Magazine, London, February, 1923.]

Owing to the maintenance of a favorable trade balance during recent months, a position has arisen in Sweden which is somewhat unusual nowadays, for the exchange value of the crown has shown a tendency to rise above its parity of 3.73 to the dollar, and it has been considered necessary to prevent the movement from going too far. The Bank of Sweden has accordingly been purchasing foreign currency from time to time, with the object of stabilizing the exchange rate at par, and so far as can be gathered at the present time this policy has met with success. A natural consequence, however, has been an increase in the internal note circulation, owing to the notes released by the bank in payment for the exchange purchased. The policy which is being pursued has the same effect as would gold imports, and if persisted in should eventually tend to raise internal prices and thus automatically check the improvement in the value of Swedish currency, while any downward movement in the crown could also be retarded by the release of foreign values, with a corresponding contraction in the internal purchasing power. There seems no reason why this legitimate attempt at stabilization should not have the desired effect, for movements in the Stockholm exchange have not been violent, and the policy has been put into force when the trade movement favored a rise in Swedish currency.

GOLD COINS CIRCULATING IN THE GENEVA DISTRICT.

[From Consul Lewis W. Haskell, Geneva, February 1, 1922.]

After an almost complete disappearance from current circulation, gold coin is now circulating in considerable volume at Geneva. These coins are of 10 and 20 franc denominations, of both the French and Swiss Republics.

It is evident that the great appreciation of the Swiss franc, as compared with the currency of the surrounding countries, has brought out this gold. During the whole month of January the Swiss franc, for example, was at a premium compared with the dollar. On January 31, 1922, the average rate of exchange for the dollar was 5.12½ (5.18 normal).

TURKEY.

MONETARY REFORM.

[From Moniteur des Intérêts Matériels, Brussels, August 28-29, 1922.]

The commission on monetary reform has just published its conclusions aiming at the following measures: The small notes of 5, 20, and 25 piasters will be withdrawn entirely and replaced by coins of the same denominations, to which will be added the nickel coins (10 and 20 para, and 1 piastre) withdrawn from circulation in Syria since the French mandate. The notes of 2½, 5, 25, and 500 Turkish pounds will be replaced by new notes worth ½, 1, 5, 10, 50, 100, and 1,000 Turkish pounds. The amount of the new notes will be 158,740,000 Turkish pounds. The issue of the new notes, as well as the exchange of the old notes against new ones, will take place under the auspices of the debt administration.

BRITISH GOLD COIN MELTED AT CONSTANTINOPLE DURING 1920 AND 1921.

[From fifty-first and fifty-second annual reports of the deputy master of the royal mint, 1920 and 1921.]

During 1920 and 1921 British gold coin is stated to have been melted at Constantinople to the total amounts of £43,635 and £22,750, respectively.

Domestic gold coinage executed at Constantinople mint during 1921.

YUGOSLAVIA.

The estimated total amount of gold and silver used for industrial purposes during the year ended December 31, 1922, was as follows: Gold, 100 kilos (3,215 ounces); silver, 10,000 kilos (321,500 ounces).

The quantity of gold and silver extracted from copper ores during the year 1922 was as follows: Gold, 215.54 fine kilos (6,930 ounces), valued at £32,384 (\$157,597); silver, 834 fine kilos (26,813 ounces), valued at £4,030 (\$19,612).

Approximate stock of gold and silver in national bank and of paper money used for monetary purposes on December 31, 1922: Gold, 64,012,508 dinars (\$12,354,414); silver, 16,546,411 dinars (\$3,193,457); on deposit in various foreign countries (equivalent in gold dinars), 267,587,247 dinars (\$51,644,339); on deposit in the national bank in various foreign currencies (equivalent in gold dinars), 1,154,288 dinars (\$222,778); note circulation, 5,039,883,135 dinars.

The total imports of gold and silver during 1922 do not exceed 1,000,000 dinars (\$193,000) for each. The export of gold and silver is forbidden.

GOLD PRODUCTION.

[From Bulletin économique et politique, April 17, 1923.]

The total quantity of gold recovered in the entire country and from the rivers Drava, Moura, Pek, Timok, Vitovnitsa, and their tributaries amounts to from 64 to 74 kilos yearly.

GOLD STOCK.

[From Commerce Reports, December 18, 1922.]

The share held in the Austro-Hungarian Bank by those former Austro-Hungarian Provinces that are now included in Yugoslavia amounts to 30,000,000 gold crowns. A first payment of 10,000,000 gold crowns was received by the Government some time ago, and quite recently a second installment of 14,000,000, leaving only 6,000,000 still unpaid. The first installment was used to purchase 160,000,000 paper dinars, which were destroyed.

Metallic stock and note circulation of the Bank of Yugoslavia on December 31, 1922.

[From L'Economiste Européen, Paris, March 30, 1923.]

SILVER RESERVE AND SILVER CURRENCY.

(By Vice Consul Henry R. Brown, Belgrade, March 23, 1923.)

The effective proportion of silver to other reserve items averages about 16,500,000 silver dinars, as against 64,000,000 gold dinars, and 270,000,000 dinars represented by foreign bank notes and by credits abroad. No notes are at present being redeemed either for silver or gold and the amount of silver held as reserve remains practically stable.

Due to the fact that silver dinars have a greater value than the notes issued for silver, the use of silver as currency has been discontinued. There has been no agitation for the adoption of bimetallism or for the silver standard.

EFFORTS PUT FORTH TO STABILIZE EXCHANGE.

[From Commerce Reports, October 23, 1922.]

The dinar exchange has shown a strong trend upward, rising from approximately \$0.0119 on September 8 to approximately \$0.0156 on October 13, although the reason for this is not apparent. The Government attempted to control exchange by new measures during September, but apparently without success. It was planned that, beginning with September 18, the bank representatives determine daily the amount of foreign exchange to be bought and sold that day on the bourse, and to control the rate of exchange, hoping in this way to stabilize the dinar at about 77 to the dollar. However, the holders of foreign paper were able to sell privately at rates much higher than those offered on the bourse. This naturally resulted in a shortage of such values on the bourse and a consequent increase in the rates in order to induce holders of commercial paper to sell all their holdings there.

CURRENCY.

[By Consul Raymond Davis, Aden, March 6, 1923.]

Aden has no mint or currency of its own. Silver was not withdrawn from circulation during the war. There was an embargo on the export of it only, but this was removed in 1920. The people in Aden have confidence in paper money and consider it much more useful than silver for carrying about or making postal remittances.

HEJAZ.

CURRENCY.

English gold is the standard currency of the country. All Government payments (customs, quarantines, passport and other dues, telegraph charges, etc.) and many nonofficial payments, notably rents, have to be made in English sovereigns. Other currencies circulate at a discount varying with the season, with pilgrimage arrivals, etc., and with the merchants' need of paper money to remit abroad, the export of gold being categorically prohibited.

The other currencies are: Turkish silver and nickel coinage; Egyptian notes and coinage; Indian rupee notes and coinage; Javanese dollar notes and coinage; etc.

During 1922 in Jeddah an English sovereign cost: Highest, 114 Egyptian piasters; lowest, 99; average, 106; representing 16½, 1½, and 9½ per cent, respectively, as the premium of gold on English sterling. The rate of Turkish piasters to the English sovereign is fixed by the Government at 112; by mercantile practice, at 122; by bazaars at from 140 to 240.

No coin, bullion, or ore is imported by the Hejaz Government. The annual pilgrimage brings tens of thousands of pilgrims from Java, the Straits Settlements, India, Egypt, and the rest of the Moslem World. Their expenditure during their sojourn in the Hejaz, which varies from two to eight months, is the only source of the country's wealth.

CHINA.

CHINA'S PRESENT CURRENCY.

[From The Economist, London, April 14, 1923.]

The mints which have been specially active are those at Nanking, Hangchow, and Canton; the two former have been busy coining Yuan dollars—fairly satisfactory as regards weight and fineness—and this currency is largely displacing sycee in the northern trade. Of the mints at Tientsin, Wuchang, Yunnan, Chengtu, and Anhui, we have heard very little during the year; they have probably been confining their operations to the manufacture of copper coins of ever lessening value.

The most interesting—one may say amusing—item of news was, however, that the Anhui Mint had produced large quantities of forgeries of the Canton Mint's 20-cent pieces. These were seized by the maritime customs, which is now prohibiting the circulation of debased coinage from one port to the other. All these mints are run for profit by whoever happens to have secured control of them. The coinage is debased in fineness and reduced in weight as opportunities present themselves. The profit is made in the period of the lag between the debasement of the coinage and the corresponding decrease in the market values.

The only safeguard left is the sycee of Shanghai. The manufacture of this is under the supervision of the native guilds, and has hitherto proved to be absolutely reliable. It is the touchstone of the various currencies that are manufactured by the mints—their quoted prices in the market are always based on Shanghai sycee, and when

debasement takes place these prices will ultimately reflect it. If Shanghai sycee were to disappear chaos would come. Each mint would vie with the other in turning out debased dollars, and we might in course of time see a coin that had in it more copper and foreign matter than silver. So, until there are seriously administered mints in China it is absolutely essential to hold on to honest Shanghai sycee.

¹ Mostly American \$20 gold pieces.

CURRENCY.

The 20-cent silver coin is 0.700 fine and a trifle smaller than the American quarter. There are five coins to the dollar. The coins have rolled edges. On one side of the coin there is printed in English the denomination of the coin together with the name of the Province. On the other side are Chinese characters setting forth the year, the Province, and the denomination.

CHEFOO.

CURRENCY.

The coinage in use consists of Mexican and Yuan dollars, subsidiary silver coins in the denominations of 10 cents, 20 cents, and a few half dollars. Subsidiary Yuan coins are on a parity with the dollar, but other coins vary greatly, to-day's rate being 1.17-1.18 to the dollar. The copper 10-cash piece, supposedly equal to 1 cent, is gradually losing its value, to-day's rate being 190 to the dollar, as compared with 140 a year ago. The cash is very little used.

CHUNGKING.

The silver domestic coinage executed in home mints during 1921 consisted of 5,170,890 Szechuan dollar pieces having a face value of 5,170,890 Yuan dollars (\$2,508,104).

Estimated stock of silver coin and notes in circulation on December 31, 1921: Silver, 90,000,000 Yuan dollars (\$44,143,200); paper notes, 2,500,000 Yuan dollars (\$1,226,200).

Customs returns show an absence of any export or import of gold or silver during the year 1921.

FOOCHOW.

The silver domestic coinage executed in home mints during the year ended December 31, 1922, consisted of 10,000,000 20-cent pieces valued at 1,818,181 Chinese dollars (\$949,272).

Quantity of gold and silver used in the industrial arts during 1922.

HUNAN.

HUNAN CURRENCY.

[By Vice Consul C. D. Meinhardt, Changsha. In Commerce Reports, April 16, 1923.]

The Hunan Mint has coined 3,000 20-cent pieces and some 50-cent pieces of the same design as the Yuan Shih Kai dollar and with no designation showing that they were made by this mint. The coins were quickly disposed of, but it has been decided that they will not be accepted at face value. Silver dollars are scarce in Changsha now, as they have been drawn into the interior for payment of rice and other products. A large amount of notes issued by the Bank of China and the Bank of Communications at Hankow is being used in Changsha at 2 to 3 per cent discount to cover the cost of shipping in silver.

MUKDEN.

Approximate silver reserve and note circulation of the Mukden banks in May, 1923.

Name of bank.	Total note issue.	Note circulation.	Silver reserve.	Guaranty funds.	Cash in provincial treasury.

Total.....	74,000,000	57,060,000	14,500,000	30,880,000	23,000,000
United States equivalent ²	\$29,748,000	22,938,120	7,570,450	12,413,760	9,246,000

¹ These guaranty funds are not of a fixed amount, since they are guaranteed by the Provincial Government revenue. The amount of the revenue is approximately 30,000,000 Fengtien big dollar notes per annum, which is to be divided into two portions, one being applied as guaranty funds for the Provincial Government Bank of Manchuria, the other for the Bank of Industrial Development.

² Conversion rate, 1 Yuan dollar=\$0.5221, at the 1922 average price of silver per fine ounce, \$0.67934. One Fengtien big dollar note=0.77 Yuan dollar at the present rate of exchange.

The Mukden Mint coins nothing but copper coins of the denomination of 1 and 2 cents. The currency in circulation, in addition to the Fengtien local paper currency, consists of Yuan silver dollars, Pei-Yang silver dollars, and a few Hongkong silver dollars. Mexican silver dollars are seldom seen here. Yuan silver pieces of the value of 50, 20, and 10 cents are also in circulation, while the Japanese paper Yen, as well as Japanese 50, 10, and 5 sen pieces, are used in the Japanese towns throughout the South Manchuria Railway zone. Most of the Japanese notes in use are those issued by the Bank of Chosen, but the Japan Ginko (Bank) notes are readily accepted.

There are two kinds of Fengtien paper notes in circulation, one known as Fengtien "big money" and the other as "small money". The big dollar is worth \$1.20 small money, and notes for \$10 (\$12 small money), \$5 (\$6 small money), and \$1 (\$1.20 small money) are in common circulation. The small money notes are of the denominations of \$1, 50, 20, 10, and 5 cents. The value of the Fengtien local notes fluctuates considerably, and within one month has dropped from \$1.42 to \$1.60 to the silver dollar. The quotation to-day (May 8, 1923) is \$1.56 small coin for one silver dollar. Most of the local commercial transactions are based on Fengtien money.

SHANGHAI.

The domestic silver coinage executed at the Hangchow Mint during the year ended December 31, 1922, consisted of 38,940,000 Yuan dollars (\$20,330,574).

Approximate stock of silver coin, silver bullion and notes in the banks of Shanghai on December 31, 1922: Silver coin, 25,910,000 Shanghai taels (\$19,066,392); 29,090,000 Mexican dollars (\$15,527,078); silver bullion, 484,000 ounces (\$328,801); notes of banks of issue, 60,000,000 Mexican dollars (\$32,025,600).

The actual currency consists of big silver dollars; small subsidiary coins as 10 cents, 20 cents, and copper 1-cent pieces.

¹ Conversion rate, 1 Yuan dollar=\$0.49048, at the 1921 average price of silver, \$0.63117.

Copper "cents" (10-cash pieces) are the currency of the masses of the people. The actual cash (currency with hole in center, strung on strings) has disappeared from Shantung, having been melted down and shipped out as copper ingots during the war to Japan. The copper "cents" constitute, in consequence, the currency of the masses, quotations in the interior being made in cash but paid in coppers or in silver. The ratio of copper "cents" to the dollar has varied considerably during the year—from 154 to 180.

YUNNAN.

GOLD PRODUCTION.

[From The Mining Journal, London, February 17, 1923.]

Gold is found chiefly in Kaihwa, Likang, Weisi, Chengtien, Tengyueh, etc. At the present time only the Kiang Ma gold mine in Weisi is operating. Its output is about 200 taels of gold annually.

CYPRUS ISLAND.

The export of gold bullion to Singapore during the year 1922 amounted to 13,781 ounces, valued at 477,594 Straits dollars (\$271,178).

FRENCH INDO-CHINA.

The silver coinage executed at the Paris Mint during the year ended December 31, 1922, consisted of 20 and 10 cent pieces, 0.680 fine, and having a face value of 3,580,000 piasters (\$1,900,013).

The 3,500,000 silver piasters (\$1,857,555) withdrawn from circulation for recoinage during 1922 were the 20 and 10 cent pieces, 0.400 fine, made by the San Francisco Mint. These coins did not prove satisfactory, as they turned a brass color upon arriving in this damp country, and the natives refused to accept them for fear of their being false.

The estimated quantity of new gold bullion used in the industrial arts during the year ended December 31, 1922, was 2,827 fine kilos (90,888 ounces), valued at 18,094,336 francs (\$3,492,207).

¹ Conversion rate, 1 piaster=\$0.53073; at the 1922 average price of silver, \$0.67934.

The imports of gold and silver into French Indo-China during the year 1922 were as follows: Gold bullion from China, 18,094,336 francs (\$3,492,207); silver coin from France, 3,580,000 piasters (\$1,900,013).

CURRENCY.

[From American Consul Leland L. Smith, Saigon, April 18, 1923.]

The circulation of the Banque de l'Indo-Chine is now fixed at 100,000,000 piasters. The notes are payable on demand in silver coin. During the war the note issue was made inconvertible, but convertibility was reestablished on January 1, 1922. During the period of inconvertibility the native population and public generally became accustomed to the use of notes, which have now largely replaced silver coin in circulation.

The total reserves of silver coins on August 31, 1922, were as follows: In central bank, 26,860,000 piasters; in Government treasury, 3,165,000 piasters.

Only 2,200,000 piasters silver money have returned to circulation since ending of forced paper currency régime; natives prefer paper money.

COINAGE.

[By American Consul Charles L. Hoover, Batavia, Java, December 29, 1922.]

On December 15, 1922, the Government of Netherlands Indies began placing in circulation the new guilders which were provided for in the law of November 27, 1919. There were 2,200,000 of these new coins minted and 1,000,000 have now been placed in circulation through the Government treasuries in Batavia, Semarang, Soerabaya, and Bandoeng. Half guilders numbering 16,000,000 have already been coined and placed in circulation. The new guilder contains only 72 per cent of silver. The new coins are minted from silver obtained by melting up the old guilders, so that, aside from the actual cost of this melting, alloying, and minting, the Government has a profit of 312,500 guilders for each million of the old guilders melted down.

The total import of United States gold coin during the year ended December 31, 1921, was 272,600 florins (\$109,585).

Imports into and exports from Netherlands East Indies during the year ended December 31, 1921.

CURRENCY—METALLIC RESERVE.

[By Consul C. O. Spamer, Medan, Sumatra, February 24, 1923.]

The balance of the Java Bank for the entire colony on February 10, 1923, shows a gold reserve of 65,587,135 florins, as against 57,401,283 florins in silver. In addition, there was bullion valued at 94,210,434 florins, of which 1,222,004 florins was silver and the remainder gold.

During the war, when there was a heavy drain upon the silver reserve, the Java Bank issued what were known as "Mint Billetter," or mint notes. These mint notes will be gradually withdrawn from circulation.

No silver was withdrawn from circulation during the period of the war. There was no embargo on the export of silver. The exportation of gold only was forbidden.

The experience of the directors of the Java Bank has been that silver is the most satisfactory service metal for circulation in a colony where native oriental races predominate.

Dutch gold coins are almost never seen in circulation. The policy is to keep them as reserve coins.

CURRENCY—USE OF NOTES IN LIEU OF SILVER COIN.

[From bullion letter of Samuel Montagu & Co., London, March 14, 1923.]

The Java Bank annual report contains the following interesting remarks as to the extending use of notes in lieu of silver coins, and indicates that the pieces are disposed to accumulate in currency reserves in similar fashion to those of the Indian note reserves.

"The coining of both the silver standard coins and the subsidiary coins may be discontinued with equanimity, as there are large stocks thereof lying at the Java Bank, as well as at the Government treasuries, private banks, and commercial firms.

"The currency notes, which were issued in this country in denominations of 2½ florin and 1 florin, remain a popular medium of payment among the native population, and are in fact even preferred above their silver equivalents in many districts."

PALESTINE.

The estimated amount of foreign gold and silver coin used in the industrial arts during the year ended December 31, 1922, was as follows: Gold, 8,000 £E. (\$39,545); silver, 15,000 £E. (\$74,147).

The stock of gold and silver used for monetary purposes is unknown. The amount of notes of banks of issue in circulation on December 31, 1922, is estimated at 1,000,000 £E. (\$4,943,100).

The actual currency consists of paper pounds and piasters.

Premium on gold: Highest, 50 per cent; lowest, 20 per cent; average, 35 per cent.

The exportation of gold from Palestine is prohibited.

RESERVES AND CURRENCY.

[From Bankers' Magazine, New York, April, 1923.]

The reserves as of January 20, 1923, amounted to 48,818,414 pesos, of which 12,236,375 belonged to the gold standard fund and 36,581,039 to the silver certificate fund. Act 3,058 was passed in 1922 bringing the currency system to its original bases. A bond flotation amounting to 13,000,000 pesos last December was used to replenish the gold standard fund. This fund is being brought up to its actual and legal requirements and the silver certificate fund is to be maintained permanently at a 100 per cent basis.

The currency circulation as of January 20, 1923, aggregated 96,660,268 pesos, consisting of 19,672,938 in coins, 35,728,561 in treasury certificates and 41,258,769 in bank notes. This is the level, more or less, maintained during the preceding six months.

SARAWAK.

The quantity of gold and silver produced from the mines of the country and exported to England during the year ended December 31, 1922, was as follows: Gold, 1,097 fine ounces, valued at £5,196 (\$25,286); silver, 453 fine ounces, valued at £69 (\$336).

Approximate stock of silver coin and Government notes used for monetary purposes on December 31, 1922.

CURRENCY.

[By Vice Consul David C. Elkington, Algiers, March 10, 1923.]

Since the beginning of the war, when the Bank of Algeria called upon the population as a patriotic duty to deposit all its metallic currency and receive paper of equal amount in return, there have been practically no coins in circulation. In recent years some silver 5-franc and smaller pieces have reappeared. As substitutes for these small coins, there were placed in circulation, subsequent to 1914, by local chambers of commerce and various cities, paper 1-franc, 50-centime, 25-centime, 10-centime, and 5-centime notes and aluminum "jetons" for 10 and 5 centimes. Postage stamps, inclosed in waxed-paper envelopes or placed between aluminum and mica, and even street-car tickets also were used for small change.

BELGIAN CONGO.

The amount of domestic silver coin withdrawn from circulation and melted during the calendar year 1922 was 11,445 francs (\$2,209).

The quantity of gold used in the industrial arts during the year 1922 was 490.5 fine kilos (15,770 fine ounces).

The quantity of gold and silver produced from the mines and exported during the year ended December 31, 1922, was as follows: Gold, 2,126 fine kilos (68,351 ounces); silver, 204 fine kilos (6,559 ounces).

Stock of silver coin and bank notes in circulation on December 31, 1922: Silver coin, 20,120,000 francs (\$3,883,160); notes issued by the Bank of Belgian Congo, 31,837,168 francs (\$6,144,573).

NOTE CIRCULATION.

[From Supplément Colonial de L'Economiste Européen, Paris, February 16, 1923.]

The amount of the note issues fixed at a total of 3,599,975 francs by the decree of November 25, 1921, has recently been increased by a new issue of 500,000 francs, consisting of 200,000 1-franc notes and 600,000 50-centime notes, bringing the total up to 4,099,975 francs.

FRENCH SOMALILAND.

CURRENCY.

[From Supplément Colonial de L'Economiste Européen, Paris, February 16, 1923.]

The money of the colony is French money which has almost entirely superseded the rupees and the thalers. A branch of the Bank of Indo-China, located at Djibouti, issues notes whose amount in circulation exceeds 2,500,000 francs.

FRENCH WEST AFRICA.

Metallic reserve and note circulation of the Bank of West Africa on June 30, 1914, 1921, and 1922.

[From Supplément Colonial de L'Economiste Européen, December 15, 1922.]

The amount of gold exported during 1921 was 258 kilos (8,295 ounces).

SENEGAL.

The estimated quantity of gold and silver used in the industrial arts during 1921 was as follows: Gold, 100 kilos (3,215 ounces), valued at 950,000 francs (\$183,350); silver, 450 kilos (14,468 ounces), valued at 120,000 francs (\$23,160).

There are no gold or silver mines in Senegal; however, the natives collect certain quantities of gold in the regions of Bakel and Kedougou by means of washing the sands of certain streams of water. It is estimated that the total production for 1921 was about 80 kilos (2,572 ounces).

¹ The figures are for the three branches in Senegal alone.

No gold was imported in 1921. The silver coin imported was 20,000 francs (\$3,860); and the silver bullion, 39,337 francs (\$7,592).

Gold and silver exports in 1921: Gold bullion, 76,263 francs (\$14,719); silver bullion, 15,100 francs (\$2,914); silver coin, 2,939,287 francs (\$567,282). The gold was worth about 6,000 francs (\$1,158) per kilo, and the silver about 270 francs (\$52) per kilo.

There is no special monetary system for Senegal. The monetary unit is that of France. Only the "Banque de l'Afrique Occidentale Française" has the privilege to issue notes in 5, 25, 50, 100, 500 and 1,000 franc notes.

ITALIAN SOMALILAND.

The domestic silver coinage executed during the year ended December 31, 1922, consisted of 2,000,000 Italian rupee pieces (\$648,800).

STATE BANK OF MOROCCO.

[From *Moniteur des Intérêts Matériels*, Brussels, March 5, 1922.]

The State Bank of Morocco has recently made two agreements, one with the Moroccan Government and the other one with the French Government.

The Moroccan Government, as a guarantee for its notes, surrenders to the bank 40,000,000 pesetas hassani obtained from the demonetization, and binds itself to take back this hassani stock, at the surrender price, at the latest upon the expiration of the privilege; but it reserves to itself the right, if circumstances will permit the resumption of payments in metallic money, to authorize its recoinage into Moroccan francs and to keep the profit resulting from this operation.

This agreement insures the valorization of the Moroccan franc by giving it immediately, and in spite of its enforced circulation, a considerable metallic security, to which has been recently added a deposit in the French treasury, in notes of the Bank of France, which will raise to one-third of the circulation, the cover for the issues of the State bank.

The agreement with the French treasury has as its object the stabilization of the Moroccan franc in reference to the French franc. The Moroccan franc has been established by the dahir of June 21, 1920, in agreement with the French Government and in accordance with the conclusions of the monetary committee gathered at Paris in February, 1920. This new money was to be added to the French currency, like the Algerian franc, by means of a current account between the French treasury and the State Bank of Morocco.

NYASALAND PROTECTORATE.

The stock of gold and silver coin in home banks on December 31, 1922, was as follows: Gold coin, £122,886 (\$598,025); silver coin, £143,830 (\$699,949).

The export of silver coin to South Africa during 1922 was £100,000 (\$486,650).

PORTUGUESE EAST AFRICA, INCLUDING THE TERRITORY OF THE MOZAMBIQUE CO. (BEIRA).

The amount of foreign gold and silver coin withdrawn from monetary use for industrial purposes during the year ended December 31, 1922, is estimated at \$5,000 British gold coin and \$200 silver coin. The quantity of gold produced from placer mining during the year 1922 was 365 fine kilos (11,735 ounces), valued at \$256,660.

Estimated stock of gold and silver coin, also of paper money, used for monetary purposes in Portuguese East Africa on December 31, 1922.

Character of stock.	In home banks.	In circulation.	Total used for monetary purposes.

NOTE.—In addition to the above notes there are £20,000 (\$97,330) British South African notes in the Mazambique Co.'s territory (Beira), of which £15,000 (\$72,998) in banks and £5,000 (\$24,333) in circulation. About the same amounts are also in circulation (illegally) and in the banks in the rest of the Province.

Premium on gold in 1922: Highest, 20 per cent; lowest, 10 per cent; average, 17.7 per cent.

The export of gold bullion to Rhodesia en route to England in the year 1922 amounted to \$256,660.

The export of gold is officially prohibited, but it is estimated that £50,000 (British sovereigns) were smuggled to India during the year 1922.

CURRENCY.

The official coin of the country is the Portuguese silver or gold coinage as circulated in Portugal. Except in the Mozambique Co.'s territory (Beira), it has been entirely driven out of circulation by the issues of paper. British gold sovereigns and silver subsidiary currency are also in circulation. The currencies in circulation are as follows: In the Mozambique Co.'s territory the Beira pound, the Beira silver escudo, the British South African notes and currency; in the rest of the Province, the Portuguese pound, the paper escudo.

The production of gold and silver from deep mines during the year 1921 was as follows: Gold, 6,015 fine ounces, valued at £30,993 (\$150,827); silver, 502 fine ounces, valued at £46 (\$224).

Gold is at a premium. The actual currencies of the Province are as follows: Legal currencies for all districts are the escudo and Portuguese pound sterling, as well as the pound sterling note of the Banco da Beira for the territory of Companhia de Mozambique. British sterling also circulates. Escudos in 1921: Highest premium in comparison with the British sterling note, 1,011.1 per cent; lowest, 633.3 per cent; average, about 800 per cent. The libra esterlina, or note of the Banco Nacional Ultramarino, was at par value at certain periods of 1921. Its greatest depreciation in terms of British pound sterling in 1921 amounted to 14½ per cent. This note is constantly fluctuating in value. At the present time it is inconvertible.

The exports of silver bullion during 1921 were as follows: 1,000 escudos (\$1,081) to Portuguese possessions, 20,000 escudos (\$21,610) to Transvaal.

NEW CURRENCY LAW.

[By Consul Cecil M. P. Cross, Lourenço Marques, September 6, 1922. In Commerce Reports, November 6, 1922.]

On August 26 the Government of Portuguese East Africa promulgated as law, to take effect on September 1, 1922, a drastic currency measure that had previously been approved by the provincial legislative council.

This law will be in force throughout Portuguese East Africa, with the exception of the territory belonging to the Mozambique Co. This latter district, of which the capital is Beira, has its own currency.

The currency situation in the districts affected by the new law, particularly in Lourenço Marques itself, has been very complicated. Nominally the currency of the colony is the provincial escudo, the par value of which is \$1.08, but which has been steadily depreciating until at present it is worth only about \$0.05. The fluctuations to which it is subject, and its depreciation, have removed it almost entirely from the field of large business transactions and confined its use to dealings with or among the natives and the payment of postal, telegraph, and other minor Government charges.

As a result, for some time the larger business houses have preferred to transact their business in British sterling.

A further complication was the fact that the local branch of the Banco Nacional Ultramarino, which is the sole bank of issue for the colony, had issued "libra esterlina" notes which were originally at a parity with the South African sterling notes, but which depreciated approximately 20 per cent and were declared inconvertible into the latter notes. They furthermore had no definite relation to the escudo and had no subdenominations. They are, however, legal tender in both commercial and governmental transactions.

The uncertainty of the currency situation proved a severe drag on commerce. The remedial measure adopted seeks to solve the problem by (1) forbidding the importation, exportation, or circulation of foreign currency, (2) by providing for the gradual retirement of the "libra esterlina" notes at the rate of £100,000 a quarter. By these means it is planned to restore the value of the escudo by reestablishing its position as a monetary unit.

PORTUGUESE WEST AFRICA—ANGOLA.

Approximate stock of Government notes (cédulas) and small coins used for monetary purposes on December 31, 1922: Cédulas, 4,540,000 escudos (\$4,905,470); small coins, 3,443,200 escudos (\$3,720,378).

The actual currency consists of paper and small coins. No gold or silver is used.

CURRENCY.

[By Consul Reed Paige Clark, Loanda, Angola, March 10, 1923.]

Decree No. 5809 provides that the bank of issue shall have two reserve funds, a permanent reserve and a variable reserve. It limits the circulation of notes at 30,000,000 escudos, and requires the bank of issue to hold as cover a metallic reserve as follows: Gold to one-third the amount of the gold notes in circulation; silver to one-third the amount of silver notes in circulation; and copper equal in amount to the copper notes outstanding. By contract of August 4, 1919, the Banco Nacional Ultramarino was made the bank of issue.

By decree No. 172, in lieu of the notes previously issued and then in circulation, the bank of issue is authorized to issue notas privativas of the Province of Angola to an amount not exceeding 50,000,000 escudos, and the circulation in the Province of foreign notes is prohibited. The circulation of national notes, including those previously issued by the Banco Nacional Ultramarino, with the Angola imprint, is likewise prohibited in the Province after December 31, 1922. Decree No. 172 was duly confirmed by a contract with the Banco Nacional Ultramarino, dated June 27, 1922. The notas privativas have been issued and are now practically the only notes to be found in Angola.

Decree No. 13 of May 7, 1921, provides for the issue by the Province of Angola, wholly apart from the bank of issue, of bills (cédulas privativas) of a face value of less than 1 escudo. The circulation of cédulas of the Banco Nacional Ultramarino of 50, 20, 10, and 5 centavos ceased on December 31, 1921, such cédulas, however, being exchangeable until December 31, 1922, inclusive.

It is understood that the current issue of cédulas will be withdrawn within a period of 10 years, dating from January 1, 1922, to be replaced by a new issue of cédulas to the maximum amount of 12,000,000 escudos.

The circulating media of the Province are as follows: Notas privativas of 100, 50, 20, 10, 5, and 1 escudo; cédulas (privativas) (Angola) of 50 escudos; 50-centavo pieces (nickel), rarely seen; 20 and 10 centavo pieces (copper-nickel); 5, 2, and 1 centavo pieces (copper); Banco Nacional Ultramarino notes of early issues, occasionally; copper coins of old Portuguese issues—occasionally; silver coins are at times circulated in the interior of the Province.

The amount of cédulas in circulation on December 28, 1922, was 4,540,000 escudos.

Silver reserves of the Banco Nacional Ultramarino on December 31, 1921: Permanent reserve, 21,500,000 escudos; variable reserve, 4,500,000 escudos.

THE COINAGE BILL.

[From the South African Mining and Engineering Journal, Johannesburg, July 15, 1922.]

The coinage bill, introduced by Mr. Burton last week, contains many interesting features. Substantially, the measure is intended to establish a South African currency in coin. In the days of the South African Republic there was a mint at Pretoria, at which coin to the value of £2,700,000 (including £2,300,000 gold coin) was minted, and a good deal of that is still in circulation. But since 1903 all our coin has been minted at the Royal Mint in England. Now that the new South African Mint, a branch of the Royal Mint, is almost completed and fully equipped, we are going to meet our needs in coinage at Pretoria. For the present there will be no gold coinage for the simple reason that, as long as the premium on gold remains, gold producers will find it more profitable to sell in the open market than at the fixed price to the mint. Furthermore, our gold certificates are inconvertible, and gold is not in demand

for local currency purposes. When we do begin to coin gold our mint will produce, not a distinctive type of South African sovereign, but the British sovereign, and this for the excellent reason that the British sovereign commands world-wide respect and is sought everywhere. Even in the days of Kruger sovereigns, although they contained a larger amount of gold than the British, their recognition was confined to South Africa. Similarly the Australian mints, as Mr. Burton pointed out, mint British sovereigns only, and in those far-off days two or three years ago, when one saw gold sovereigns in South Africa, most of them were British sovereigns coined in Australia. But we shall have our own distinctive silver coinage, and this will be the mint's chief business in the early future. The silver coinage now current in South Africa will be gradually replaced by the new mintage, the silver for which will be obtained for the most part from the gold bullion refined at Johannesburg. From this source some £250,000 in silver annually will be secured.

REGULATIONS FOR COINING OF GOLD AND OTHER METALS AT THE PRETORIA BRANCH MINT.

[By Consul G. K. Donald, Johannesburg, February 28, 1923.]

The imperial proclamation of December 14, 1922, directed the establishment at Pretoria of a branch of the Royal Mint to be known as the "Pretoria Branch Mint," giving the regulations under which metals are to be coined. The gold coins to be minted are to be identical with those coined by the Royal Mint. Coins of other metals will be minted, but such coins shall not be considered coins "made at, or issued from, the mint, or coins coined under the direction of the master of the mint."

The charge for coining of gold shall be 3 halfpence for every ounce troy of gold of standard fineness where the amount brought at any one time does not exceed 500 ounces, and a penny in other cases.

THE NEW SILVER COINAGE.

[From The South African Mining and Engineering Journal, Johannesburg, July 15, 1922.]

The purity of the silver coin presents an interesting problem. Ever since the days of Queen Elizabeth until very recently British silver coins contained 92½ per cent of silver. To-day, under the influence of the rise in the price of silver, the proportion in the currency is only 50 per cent. Mr. Burton has decided that the percentage of silver in South Africa's silver currency shall be as high as 80, and on this basis a profit of about 16 per cent is anticipated. When the mint is in full operation the coins manufactured will be the sovereign and the half sovereign (gold); the half crown, florin, shilling, sixpence, and threepence in silver; and the penny and halfpenny in copper. Our new coinage is intended to be attractive, and designs will be sought which will be thoroughly characteristic of the country, bearing, it need hardly be said, our King's head.

SOUTH AFRICAN MINT.

[From bullion letter of Samuel Montagu & Co., London, January 24, 1923.]

The equipment of the Union branch of the Royal Mint is nearing completion. A variety of small portions of machinery have not yet arrived, mainly owing, it is said, to labor troubles in Great Britain. It is expected that after testing a start will be made in February. Meanwhile, some of the locally engaged staff are being trained in their duties, and when this is completed the mint will be able to work to about half its capacity. Minting on any considerable scale will not, however, take place for at least two months, and then it will be confined to silver and bronze coins. Possibly a few gold coins will be struck, but these will be in the nature of curios. When gold returns to parity sovereigns will be minted, replacing the reserve of bank notes. There will be no change in the denominations of the silver and bronze coins.

ZANZIBAR PROTECTORATE.

The approximate stock of silver coin in home government treasuries and of Government notes in circulation on December 31, 1922, was as follows: Silver coin, 1,600,000 Indian rupees (\$519,040); Government notes, 4,416,490 Indian rupees (\$1,432,709).

SUMMARY OF WORLD STATISTICS.

MONETARY USE OF SILVER.

Changes in monetary use of silver by the principal countries of the world since 1914 are given somewhat in detail, also in summary, in a Supplement to Commerce Reports, published under date of August 27, 1923, by the United States Department of Commerce. The data were obtained through questionnaires directed to the American Consular Service and to foreign representatives of the Commerce Department. The outstanding feature of the report is the fact of very material reduction in monetary use of silver as one of the effects of the World War.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY, AT THE
CLOSE OF THE YEARS 1921 AND 1922.

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coin as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted to bullion.

Monetary stock of principal countries of the world, end of calendar year 1921.

[Stated in United States money (000 omitted), except paper stock, which is stated in monetary unit of issuing country (000 omitted).]

1 Last year's figures.

2 State bank.

3 United States bills.

4 Fluctuates with price of silver.

5 Estimated on basis of data considered fairly reliable.

6 In United States dollars.

7 Dec. 11, 1922.

8 Jan. 9, 1923.

9 In Banco di Chile.

10 British Gulana dollars.

11 In Bank of the Republic, on Oct. 31, 1922.

12 On Jan. 7, 1923.

13 Monetary standard not established.

14 On Dec. 28, 1922.

15 Most of it held abroad, mainly in Netherlands.

16 Included in circulation of Great Britain. Of this amount, £6,354,494 circulates in Ireland.

23 Only 5-franc pieces and silver bullion.

24 Incomplete.

⁴ Fluctuates with the price of silver.

⁵ Estimated on basis of data considered fairly reliable.

²⁵ On Aug. 31, 1922.

²⁶ Includes gold held abroad.

²⁷ On Mar. 21, 1923.

²⁸ Including circulation in Tanganyika Territory.

²⁹ On June 30, 1922.

³⁰ Held in Bank of Indo-China.

NOTE.—Figures given represent each country's stock at the end of the year, except when otherwise indicated. Population figures are from the Statistical Abstract of the United States, 1921. Banks indicate no figures available, rather than no stock. Gold held abroad as follows, not included in the above figures (presumably reported by the country having actual possession): Canada, \$15,173,721; Honduras, \$250,000; Nicaragua, \$648,762; Argentina, \$3,978,023; Brazil, \$657,549; Chile, \$7,848,515; Peru, \$5,596,475; Estonia, \$4,820,000; Bank of France, \$359,809,900; Germany, \$11,917,622; Ireland, \$29,199,000; Bank of Italy, \$73,417,200; Latvia, 200 fine kilos (6,430 ounces) and \$1,912,467; Lithuania, \$529,701; Rumania, \$34,450,500 (not including the gold confiscated at Moscow); Switzerland, \$1,699,558; Philippine Islands, \$47,173,513 (in United States banks); Straits Settlements, \$3,763,686; Egypt, \$15,831,811; Union of South Africa, \$3,923,966; Yugoslavia, \$51,644,339; Italian Somaliland, \$648,800 (silver coin).

WORLD PRODUCTION OF GOLD AND SILVER.

World production of gold and silver, 1921 and 1922.

[The production figures given below are based upon the preceding data and those published in prior issues of the report of the Director of the Mint.]

Production of gold and silver in the world since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1921

REPORT OF THE DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 23, 1921.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1921, being the forty-ninth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1920.

OPERATION OF THE MINTS AND ASSAY OFFICES.

INSTITUTIONS OF THE MINT SERVICE.

For several years the number of institutions operated has remained the same—coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which has a large trade in bars of fine gold; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Seattle, Boise, Helena, Salt Lake City, and Deadwood, these being bullion purchasing agencies for the large institutions. Refineries were operated at the New York and San Francisco institutions.

COIN DEMAND.

Review of the mint service operations of the fiscal year ended June 30, 1921, shows that the effects of the recent World War are still being felt by this branch of the Government's activities. In quantity of coin manufactured this was the third largest year in the history of the service, the total number of pieces executed being 553,868,492. The following tabulation gives ready comparison of coinage operations of the United States Mint Service since the beginning of the World War:

Coinage by United States mints since 1914.

[In thousands of pieces.]

Fiscal year.	Domestic.	Foreign.	Total.	Fiscal year.	Domestic.	Foreign.	Total.
1921.....	462, 420	91, 448	553, 868	1917.....	406, 501	18, 769	425, 270
1920.....	733, 583	76, 125	809, 708	1916.....	154, 524	52, 968	207, 492
1919.....	434, 028	103, 114	537, 142	1915.....	111, 604	36, 601	148, 205
1918.....	714, 139	52, 748	766, 887	1914.....	199, 934	14, 276	214, 210

The large demand of recent years has been met only by operating the mints for long periods of time on 24-hour and 16-hour schedules, and as a result of installing improved machinery and appliances designed for quantity production.

For the first time since 1904 silver dollars were manufactured during the past year, the number executed being 19,043,000. The use of our facilities for the coinage of dollars was made possible by the accumulation of a fair stock of coins below the dollar, after the demand for such coin had ceased to be a constant drain on the output.

GOLD OPERATIONS.

One of the outstanding features of the Mint Service during the past fiscal year has been the large quantity of gold received at the New York Assay Office, some \$562,000,000. Practically all the imported gold received at New York is deposited at the assay office, and the institution has been taxed beyond its capacity for prompt handling of same. It is difficult to obtain competent men because of the comparatively small compensation possible of payment, and the result has been that those who are employed must work many hours overtime, month after month. This is a condition which should not obtain at a Government institution where large values are constantly involved.

The value of the gold acquired by the Government at the mints and assay offices during the fiscal year 1921 was \$673,161,954.26, compared with \$224,431,664.04 acquired during 1920; United States coin received for recoinage was of value \$1,887,929.17; transfers of gold between Mint Service offices totaled \$8,152,890.21; making an aggregate of gold handled by the Mint Service during the fiscal year 1921 of \$683,202,773.64.

SILVER OPERATIONS.

The receipts of purchased silver during the fiscal year 1921 exceeded those of any year in the history of the Mint Service, not excepting purchases under the acts of February 28, 1878, and July 14, 1890. The 1921 total was 66,126,511.43 fine ounces, most of which, 62,880,550.20 fine ounces, was Pittman Act silver costing \$1 per ounce. The average cost of other purchased silver was \$0.77115 per fine ounce, its total cost being \$2,503,129.53; the silver received for repayment to the depositors thereof in bars bearing the Government stamp totaled 1,306,178.12 fine ounces; the United States silver coin received for recoinage totaled 507,893.52 fine ounces, with recoinage value of \$702,116.49; silver deposited in trust by other Governments totaled 1,706,827.02 fine ounces; the transfers of silver between Mint Service offices totaled 1,375,295.25 fine ounces, making an aggregate quantity of silver handled by the Mint Service during the fiscal year 1921 of 71,022,705.34 fine ounces.

The purchase of silver bullion to replace that obtained by melting silver dollars pursuant to the Pittman Act of April 23, 1918, begun in May, 1920, was continued during the entire fiscal year, the total acquired under the act, to June 30, 1921, being 66,967,630 fine ounces, leaving 141,032,370 fine ounces to be acquired before the provisions of the act are fully complied with.

Coinage of this bullion as required by the act, to replace the dollars melted, was begun in February, 1921, and by June 30 a total of \$19,043,000 had been delivered. Every effort is being made to expedite the conversion of this bullion into dollars, since, as bullion, the silver is a "dead asset," while, as coin, silver certificates may be issued against it and used to take up a corresponding amount of Pittman Act certificates and at the same time replace the Federal reserve bank notes issued in lieu of silver certificates when the latter were retired to make the dollars available for melting. Converting this silver bullion into an active asset thus reduces the public debt to the extent of the coinage executed, and saves the payment of interest thereon. At the time of writing the accumulated stock of bullion is being rapidly turned into coin and it is expected that this work will be current before the close of the fiscal year 1922, now in progress.

Early in the fiscal year 111,168 silver dollars were allocated to and were melted at the Denver Mint, under the terms of the act, for use in manufacture of subsidiary silver coin. This gives the total number of dollars melted under the terms of the Pittman Act, 270,232,722.

Practically the entire output of domestic silver (that which is both mined and reduced in the United States) is being purchased by the Government, producers taking advantage of the fixed price of \$1 per fine ounce provided in the act for such silver, to be used in replacing the dollars melted. The price of other silver than that which meets Pittman Act requirements averaged during the fiscal year 1921 \$0.72898; the highest New York price, \$1.02 $\frac{1}{4}$ was reached August 21, 1920, while the lowest, 53 $\frac{3}{16}$ cents, was reached March 5, 1921.

DEPOSITS OF GOLD AND SILVER.

The number of deposits received during the fiscal year 1921, 89,630, exceeds by about 25,000 those of any prior year, the year 1918 ranking next. Imports of gold and purchases of silver in conformity with the Pittman Act account for the unusually large number of the year just past, while gold imports were responsible for the high record of 1918. The operation of the Pittman Act has materially reduced the number of deposits received at the small assay offices and mints, depositors sending their bullion to the coinage mints in order to obtain the larger price for the silver content.

SUBTREASURY FUNCTIONS ACQUIRED.

With the closing of the subtreasuries in the latter part of 1920 the principal institutions of the Mint Service acquired large additions to their stocks of coin, and are also being used as storage places for reserve stocks of paper money. Considerable stocks of coin which formerly would have gone to the subtreasuries have been returned from circulation to the mints for storage. These operations have added materially to the work of the mints.

At the New York assay office it became necessary to inaugurate the making of cash payments for bullion since the Subtreasury (next door to the assay office) was no longer available for the cashing of its checks. The large stock of gold bullion temporarily stored in the New York Subtreasury building has been transferred to the vault in the new assay office building.

Custody of the Subtreasury buildings in New York and San Francisco was also transferred to the superintendents of the assay office and of the mint in the respective cities; these buildings are used, in most part, by the Federal Reserve banks as distributing centers for coin, etc., but at New York parts of the vault are used for storage of standard silver dollars in the custody of the assay office.

EXPLOSION IN WALL STREET.

The bomb explosion in Wall Street on September 16, 1920, occurred almost directly in front of the entrance to the new assay office building, which was about to be occupied, and being closer to that than to any other building damaged it to a greater extent. Stones in the façade had to be replaced as well as metal window sash, grill work, interior marble finish of lobby, plaster, and glass throughout the building. Fortunately no lives were lost in the building. This explosion delayed occupancy of the new building until March 3, 1921.

REFINERIES.

The New York and San Francisco refineries were in operation during the past fiscal year, the one at Denver remaining closed.

The metal melted in each refinery considerably exceeded that of the prior year, but the electrolytic output at New York was curtailed by adjustments in working space incident to moving other divisions into the new building.

COINAGE.

The domestic coinage of the fiscal year 1921 was of value \$38,586,540, namely, \$19,043,000 in standard silver dollars, \$13,389,070 in subsidiary silver (including \$25,014 Maine Centennial half dollars and \$100,056 Landing of the Pilgrims Tercentennial half dollars), \$3,022,400 nickel, and \$3,132,070 bronze coin. The coinage other than domestic, totaling 91,448,352 pieces, included, at the Philadelphia Mint, 3,625,352 silver and 18,278,000 nickel pieces struck for Cuba, 20,000,000 nickel pieces for Peru, 2,000,000 nickel pieces for Venezuela, and 1,000,000 silver pieces for Colombia; at the Denver Mint 35,000,000 nickel pieces for Colombia; at the San Francisco Mint 1,000,000 silver and 6,765,000 bronze pieces for Indo-China, and 3,780,000 nickel pieces for Salvador.

The seigniorage on United States coinage executed totaled \$12,257,447.72, of which \$4,314,565.24 was on standard silver dollars, \$2,602,700.35 was on subsidiary silver coins, and \$5,340,182.13 was on nickel and bronze coins.

SPECIAL COIN ISSUES.

Three issues of specially designed coins were executed during the past fiscal year, they having been authorized by the acts of May 10, 1920, May 12, 1920, and March 4, 1921. They are illustrated opposite and described as follows:

The Pilgrim Tercentenary half dollar bears on the obverse a Pilgrim carrying a Bible; on the reverse the ship *Mayflower*, sailing. The Maine Centenary half dollar bears on the obverse the Maine State seal and on the reverse a pine wreath.

1

2

3

MEMORIAL HALF DOLLARS.

1. Pilgrim tercentennial.
2. Maine centennial.
3. Missouri centennial.

The Missouri Centenary half dollar bears on the obverse a bust of Daniel Boone wearing coon-skin cap and deer-skin coat, in the field 2*4 (the 24th State of the Union); on the reverse Daniel Boone with powder horn and rifle, directing the attention of an Indian to the westward course of the white man, and the name of the city, Sedalia, where the celebration was held.

STOCK OF COIN AND BULLION IN THE UNITED STATES.

On June 30, 1921, the estimated stock of domestic coin in the United States was \$1,374,719,650, of which \$814,616,897 was gold, \$288,788,378 was silver-dollar coin, and \$271,314,375 was subsidiary silver coin.

The stock of gold bullion in the mints and assay offices on the same date was valued at \$2,408,682,046.60, a gain over last year of \$614,370,560.40, and the stock of silver bullion was 59,746,198.79 fine ounces, an increase over last year of 40,082,892.86 ounces.

PRODUCTION OF GOLD AND SILVER.

The production of gold and silver in the United States during the calendar year 1920 was as follows: Gold, \$51,186,900, a reduction from last year of \$9,146,500, and silver, 55,361,573 fine ounces, a reduction from last year of 1,320,872 ounces.

INDUSTRIAL ARTS.

The amount of gold consumed in the industrial arts during the calendar year 1920 was \$82,215,087, of which \$54,009,609 was new material. Silver consumed amounted to 27,974,521 fine ounces, of which 19,280,129 fine ounces were new material.

EXPORT OF GOLD COIN.

The net export of United States gold coin for the fiscal year ended June 30, 1921, was \$78,035,473.

ESTIMATES FOR THE FISCAL YEAR 1923.

Total appropriation estimates for the Mint Service for the fiscal year 1923, including the office of the Director of the Mint, amount to \$1,403,190. The appropriations for the year 1922 amount to \$1,563,480.

APPROPRIATIONS, EXPENSES, AND INCOME.

The appropriated amounts available for Mint Service uses during the fiscal year 1921 totaled \$1,950,608.82; reimbursements to appropriations for services rendered amounted to \$565,269, making an available total of \$2,515,877.82.

The expenses chargeable to appropriations were \$2,095,865.89; those chargeable to income, \$144,140.28; total, \$2,240,006.17.

The income realized by the Treasury from the Mint Service totaled \$13,355,051.88, of which \$12,257,447.72 was seigniorage.

ADDITIONS AND IMPROVEMENTS.

PHILADELPHIA MINT IMPROVEMENTS.

The new equipment and appliances referred to in reports of the last two years have demonstrated their worth and efficiency. While most of the improvements made were to facilitate the manufacture and handling of nickel and bronze coins, for which the demand in recent months has been small, it has been found that many of them are adaptable as they are being used in the coinage of silver dollars. The capacity for coining silver dollars has been increased by an additional automatic scale which was built in the machine shops of the mint and added to the battery of seven such machines already in use.

For the past seven years the principal melting rooms of this mint have been using city gas as fuel, mixed with air at a predetermined proportion of about three parts air to one part gas and distributed to furnaces on the Selas principle. While this system is highly efficient it was found unsafe, due to the possibility of an explosive mixture being held in the distributing lines. This condition was confronted when the heating value of city gas was changed from 620 to 520 British thermal units, and necessary changes of machine and burners had to be made in order to have each furnace function properly.

After a blow-out in the gas machine that damaged the compressor beyond repair, it was decided to change the method of burning gas and be rid of explosive mixtures in the gas lines, having primarily safety in mind, then efficiency. Modern practice tends toward boosted gas as a fuel, and the Selas plant has been replaced by a high-pressure system which is exceedingly simple, and with a wide margin for increasing capacity. There are duplicate units of 12,500 cubic feet gas capacity which, if the occasion arises, can be operated simultaneously, this providing a supply of 25,000 cubic feet gas per hour. Each unit consists of a Nash hydroturbine compressor. This compressor has a rotor which revolves freely in an elliptical casing filled with water. The compressor is valveless, has no gears, loose moving or reciprocating parts; no piston packing to renew, no cylinders to lubricate, and no bearing adjustments to make. Gas is drawn into the compressor and by means of centrifugal action is compressed to 10 pounds pressure; water is used in the compressor as a seal. The water is then separated from the gas and the gas is distributed through the mains at about 10 pounds pressure. The furnaces are the same types as have been used for years past, but with this high pressure gas a single special burner is used per furnace, instead of two. This represents a saving of one-third the time necessary to reline a furnace over the two-burner type, and shows a correspondingly longer life from "wear and tear" on brick-work construction. This is considered a decided improvement, with equal efficiency, more regular melt periods, better control, absolute safety, and longer life for refractory linings.

The filing of the edges of minor coinage ingots has been superseded. Instead, all ingots that have fins or sharp edges to be removed are now ground on a "Crystolon" wheel. The grindings from these ingots are separated, the heavier metallic portions being put into the regular melts, while the fine material must be worked independently to rid the melt of the carborundum grit.

The deposit melting room, as now equipped with Northrup induction electric furnaces, is melting all deposits electrically. For the smaller deposits, ranging in weight from 5 to 100 ounces, two single-phase 12-kilowatt furnaces are used. The method here is to melt in superimposed crucibles, two per furnace, each crucible having its own spill saucer beneath. If a deposit is too large for this method a single crucible of sufficient size is used. The graphite jacket or conductor (a crucible), forming a part of each 12-kilowatt furnace, is permanently secured in the furnace and no direct melting is done in same. The 32-kilowatt furnaces have two coils (2-phase system), are duplicates, and the pure graphite crucibles are removable. In these furnaces melting may be done directly within the conducting crucible, or any type of crucible that will fit within the pure graphite jacket may be used. These two larger furnaces may be used together only if operated on single-phase current; ordinarily it is desirable to use the full capacity of this high frequency converter outfit, consisting of 24 condensers having a capacity of 32 kilowatts on a single furnace, with 2-phase current. This gives the maximum heating effect and higher efficiency. By this method the other furnace is a spare. Provision is made for switching the current at once, in case of need, from one furnace to the other. The test run upon this larger furnace showed a melting capacity on fine silver purchase-bars of 17,911.75 ounces in 6.9 hours, or 6 pounds per kilowatt-hour on a current consumption of 204.7 kilowatt-hours, the current costing 2 cents per kilowatt-hour; this figures considerably cheaper than gas. The low operating cost, together with the absence of excessive heat when the crucible lid is in place, makes this electric furnace equipment a most attractive and highly efficient one. The arrangement of the furnaces in the deposit melting room has been entirely changed since electrically equipping them. The old brick stack, occupying a floor area of 24 square feet, has been removed, making this space available for apparatus. The four furnaces are now in line against the long wall of the room, with windows at the backs of the men when operating. All four furnaces are connected to the new boiler-plate stack, which has a horizontal section hung to the ceiling. This new stack has been provided with offsets to break the draft and serve to entrap values which would otherwise escape; it is provided with ample manhole plates for ease in cleaning. An overhead track and trolley system has been installed to serve each of the larger furnaces, thus facilitating the removal of hot crucibles and the pouring of the residues.

SAN FRANCISCO MINT IMPROVEMENTS.

Coining department improvements during the past fiscal year include the following:

A tote box conveyor, having a capacity of 180 standard size coin boxes per hour, has been installed between the coiner's weigh room and the adjusting room. The carrying mechanism is entirely enclosed in a sheet metal case having doors (provided with locks and keys) located at convenient points in the casing to permit of inspection of the interior. The boxes are put on the conveyor at the receiving end by hand, but are automatically discharged at the delivery end. The conveyor motor is controlled from both the weigh and adjusting rooms and the electrical connections are arranged so that

the conveyor always moves away from the particular controlling station. A speaking tube and electric bell system complete the installation.

A one-ton Link Belt Co. motor-driven trolley-hoist has been installed between the ingot transfer room and the press room, passing through the rolling room and the coiner's weigh room en route. The hoist is hand operated; the trolley travel may be hand operated but it also has a special remote control, having three operating stations, i. e., press room, rolling room, and transfer room.

The hoist travel is entirely automatic between the transfer and rolling rooms, rolling and press rooms, press and transfer rooms. The carrying rail consists of sections of 8-inch, 18-pound I beams, suspended from the wall or ceiling as the case may be. Mounted upon the top flange of the rail are insulating blocks which carry the four conductors, two of which are direction conductors for the operation of the travel and two main conductors. Dead ends are provided on both sets of conductors at points in the transfer and press room as consistent with safety of operation. At a point in the rolling room near the whitening room a cut-out section is installed in the direction conductors to permit of the hoist being automatically stopped at this point. The press and transfer rooms each have a three button control, i. e., forward, backward and stop. The rolling room has a four button control, the additional button being marked "automatic stop." The stop and automatic stop buttons are provided with a simple arrangement which locks them in place; their use is explained below. The operation between the transfer and rolling rooms is as follows: The automatic stop button in the rolling room is first locked. The direction button is then pressed and the hoist run over the cut-out section by means of the hand control. At this point the direction relay picks up and the hoist continues on to its destination, stopping automatically at the end of the line. The operation between the extreme ends of the line, i. e., press and transfer rooms, is the same as the foregoing, with the exception that the automatic stop button in the rolling room is left open, thus closing the cut-out section, giving a clear through line. The hoist may be used at any part of the line without interference from any station by locking any stop button. The trolley can be operated on any part of the line by means of the hand control. Provision is also made to prevent the hoist being operated while en route. The ingots are transported from the transfer room to the rolling room in 1,000 pound (melt) lots in an angle iron sling. With the use of sling, cradle, and skids no extra piling of the ingots is required. Coin blanks are conveyed between the press and whitening rooms in steel pans and also on wood platforms. The platforms have a capacity of nine standard size coin boxes. Clippings are conveyed in sheet iron boxes. The rolling and cutting rooms have been rearranged for proper routing of the work.

The whitening room now occupies a space in the old strip annealing room. This space is inclosed in a metal grill which permits passage through the room without interfering with the whitening operations. The long cooling tank under the furnace has been replaced by a sheet-iron tank and bucket conveyor. The conveyor is made of acid-proof bronze and has eighteen 14-gauge copper buckets which discharge the whitened blanks directly into a basket at the back of the furnace. It is driven by a chain and gear mechanism, which is connected to

the retort driving shaft. Two speeds are provided: Slow speed, the furnace discharging the blanks into every bucket, allowing them to remain in solution sufficient time for whitening; fast speed, the furnace discharging the blanks into every fourth bucket, which gives sufficient time in tank for cooling purposes.

The tank is made of one-eighth-inch sheet iron with welded joints. It is $42\frac{1}{2}$ by $20\frac{1}{2}$ by $24\frac{1}{2}$ inches, with a $1\frac{1}{2}$ -inch water jacket space around the sides and back. The front is sloped backward on an angle of 30 degrees to permit the proper placing of the receiving basket. The inside of the tank is lead lined and it is provided with a drain near the front end. The tank with conveyor is mounted on a carriage with wheels running in channel-iron guide rails; it is held in place by spring tension hooks.

During the past year installation in the melting and refining department of the electric furnace, now used for the melting of minor coinage metals, was completed. This is a 1,000-pound Rennerfelt arc furnace of the tilting type, with hand control of the electrodes. The power on the high tension side is 2,400 volts, 2-phase, 60-cycle, 4-wire. On the low-tension side 110 volts, 2-phase, 3-wire. The transformer room is in the basement directly below the furnace. The furnace was first put in operation on November 9, 1920, and has produced 334,024 pounds of bronze and 155,421 pounds of nickel ingots. The results were uniformly good and showed an increase of about 40 per cent in product and a reduced tonnage cost of about 30 per cent when compared with crucible melting.

The electric melting room is operated in the following manner: From the furnace the molten metal is poured into heated bull ladles, which are carried to the turntables on high-speed blocks operating on a flat rail trolley. There are two turntables, each with 10 double molds, so that the pouring of a round of ingots on a turntable results in the casting of 20 ingots. The double pouring system is used and each turntable is fed by a bull ladle. From the molds the ingots are tossed on a gravity conveyor, which carries them to the cooling tank, where they are picked up by a power conveyor, carried through the cooling tank, and dumped into a receiving bin. The ingots accumulate in this bin, remaining there until the entire heat is poured, when they are taken out and each ingot in turn is fed to a topping machine, a shearing machine, and a grinder. The finished ingot is placed in a cradle on a transveyor platform, and when the entire melt is gathered the platform is put aside for weighing on the avoirdupois scale previous to delivery to the coining department.

An electric melting crew consists of eight men, distributed as follows: A pourer, a mold opener and picker-up to each turntable, a man on the electrode controls, and a man on the furnace tilting wheel. When a melt has been poured the men not engaged in recharging the furnace attend to the topping, shearing, and grinding of the ingots.

Finding that the topping machines were not heavy enough for the larger sized ingots, a 35-ton shearing press was purchased. It was found advisable to purchase a 36-inch metal shear for removing the side fins. For heating the bull ladles two gas flare heaters were installed.

For the transfer of minor coinage ingots and clippings and for make-up in the minor coinage metal room, two Fairbanks dial scales

of 2,000 pounds capacity each were installed, and to work with these scales two Cowan transveyors with 15 metal topped platforms were procured.

There has been installed in the minor coinage make-up room a combination gravity and power conveyor, which receives purchased copper on the curb line of the street and carries the ingots to the various sections of the storage space in the make-up room. This is accomplished by means of hinged sections opening as gates controlled by wire ropes.

The sweep cellar has been remodeled. An old Chili mill was moved in and was changed from belt to motor drive, an incinerator was built, space was found for a retort, and a new drying pan was installed. This drying pan has a heat-insulated concrete lining and is heated by three gas flares, each 16 inches in diameter.

A new Monarch Rockwell double chamber tilting furnace of 250 pounds capacity per chamber was purchased for the refinery.

A new condenser was installed in the assay department for making distilled water for assay purposes.

DENVER MINT IMPROVEMENTS.

During the past fiscal year there have been installed in the coining department three power operated coin-counting machines, and strip-cutting attachments to three disk-punching machines. The disk annealing and cleaning room equipment—furnaces and other appliances—was moved from the third to the second floor, directly over the press room. These changes with the installation of two additional tumbling barrels and one centrifugal drier have added materially to the efficient operation of the mint.

The sweep cellar changes referred to in last year's report, which included installation of a rotary drier, have now been completed. Two Duriron pipe lines, in place of the former lead pipe lines, and two Duriron sinks have been placed in the assay department.

NEW YORK ASSAY OFFICE IMPROVEMENTS.

The changes at the New York office during the past year have for the most part been the carrying into effect of the improvements described in last year's annual report, many of them having been delayed as an incident to the Wall Street explosion.

INCOME AND EXPENSES OF THE FISCAL YEAR, 1921.

Earnings:	INCOME.	
Credited to appropriations—		
Charges on foreign coinage executed.....		\$322,633.14
Silver dollar coinage costs, from special fund.....		160,016.81
Charges for manufacture of special medals.....		16,590.14
Charges for work done for other institutions, etc.....		66,028.91
Total earnings credited to appropriations.....		\$565,269.00

Earnings—Continued.

Credited to revenues—

Mint charges on bullion.....	\$421, 445. 15
Proceeds of medals and proof coins sold.....	6, 603. 05
Receipts from special assays of bullion and ores.....	3, 894. 00

Total earnings credited to
revenues..... \$431, 942. 20

Total earnings..... \$997, 211. 20

Profits:

Gain on bullion shipments to refineries.....	\$191. 37
Less contra losses.....	21. 67

169. 70

Surplus bullion recovered.....	73, 149. 78
Proceeds of sale of by-products (platinum, etc.).....	22, 947. 45
Proceeds of sale of old materials....	4, 114. 19
Commission on telephone calls.....	11. 84

Total profits other than seign-
iorage..... 100, 392. 96

Seigniorage on silver-dollar coinage.	4, 314, 565. 24
Seigniorage on subsidiary silver coinage.....	2, 602, 700. 35
Seigniorage on minor coinage— Nickel.....	2, 637, 179. 91
Bronze.....	2, 703, 002. 22

Total seigniorage..... 12, 257, 447. 72

Total profits..... 12, 357, 840. 68

Total income..... 13, 355, 051. 88

EXPENSES.

Chargeable to appropriations:

Compensation of employees—

Mint Bureau, salaries appropriation.....	\$22, 466. 67
Mint Bureau, increase of compensation ap- propriation.....	2, 570. 00
Mints and assay offices, salaries appropriations.	230, 857. 44
Mints and assay offices, wages appropriations..	1, 154, 311. 17
Mints and assay offices, increase compensa- tion appropriation.....	196, 428. 82

Total compensation of employees..... 1, 606, 634. 10

Equipment stores and other expenses—

Mint Bureau, contingent appropriation.....	5, 204. 52
Mints and assay offices, contingent and per- manent appropriations (including \$12,938.65 wastage of gold and silver in operative de- partments and \$12,346.78 loss on assay value of operative sweeps sold).....	478, 813. 28
Transportation of bullion and coin between mints and assay offices, freight appropriation.....	5, 213. 99

Total miscellaneous expenses chargeable
to appropriations..... 489, 231. 79

Total expenses chargeable to appropriations..... 2, 095, 865. 89

Chargeable to revenue:

Seigniorage on minor coinage—

Expenses of distributing minor coin to Treasury offices.....

\$140,685.80

Wastage of minor metals in operative departments.....

3,454.48

Total chargeable to revenue..... \$144,140.28

Total expenses..... 2,240,006.17

Net income of the Government from the mint service..... 11,115,045.71

Total..... 13,355,051.88

DEPOSITS, INCOME, EXPENSES, AND EMPLOYEES, BY INSTITUTIONS, FISCAL YEAR, 1921.

The number and value of deposits, the income (including seigniorage), the expenses of the fiscal year 1921, and the number of employees on June 30, 1921, at each institution follow:

PROOF BULLION (1.000 FINE).

In order to establish uniformity in assay of bullion in the offices of the Mint Service, all proof gold and proof silver is made at the Mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1921 was: Gold, 543 ounces; silver, 450 ounces.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1921.

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1921, was 7 million fine ounces of gold and 104.68 million fine ounces of silver. There were also operated upon at the coinage mints 155 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the Superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

¹ There was no gold operated upon by the coining department at Denver Mint, although there was recovered 5.143 fine ounces.

The operations of the assay office at New York covered a period of 13 months from June 1, 1920, to June 30, 1921.

^a The operations of the melting and refining department, Philadelphia Mint, include 1,299,130.177 fine ounces of foreign gold bars, 483,113.31 fine ounces of silver coin, and 169,016.895 fine ounces of domestic gold clippings and coin run into bars for storage for the benefit of the deposit melting room but not taken into account of this department.

REFINING OPERATIONS.

The total output of our refineries during the fiscal year 1921 of gold and silver upward of nine hundred ninety-nine thousandths fine, was 8,377,162.381 fine ounces; the net product was 7,796,909.39 fine ounces; details follow:

ENGRAVING DEPARTMENT.

Coinage dies for all United States mints are manufactured by the engraving department of the Philadelphia Mint. Such dies made during the fiscal year 1921 totaled 6,950, of which 4,971 were for domestic use, the balance, 1,979, being for foreign coinage made in our mints. For the manufacture of nearly 5,000,000 Victory medals by contractors 3,380 dies and hubs were made, while miscellaneous hubs and dies brought the year's total to 10,645.

MEDALS MANUFACTURED.

The medal division manufactured 46,798 national médals during the year, of which good-conduct medals for the Marine Corps and rifle and pistol competition medals for the Army form a large proportion. For universities and schools 739 medals were made; presidential medals, 1,678; and of the medals which may be purchased by the public at cost price at the mint in Philadelphia 7,066 of gold, silver, and bronze were made.

MEDALS SOLD.

Medals manufactured at the mint at Philadelphia were sold during the fiscal year, as follows:

Items.	Pieces.	Value.
Gold medals.....	142	\$7,489.65
Silver medals.....	565	1,358.54
Bronze medals.....	12,227	5,599.53
Total.....	12,934	14,447.72

THE PROGRESS OF THE NUMISMATIC COLLECTION.

Accessions to the numismatic collection the past fiscal year have not been very numerous, the purchase fund having been applied to the acquisition of a small number of coins long desired because of their historical importance. Of chief importance among these are several Roman gold pieces and a few silver denarii, some of which relate to leading events of the long Civil War. And especially interesting for the educational purpose it is sought to serve with the Roman series, are gold coins of Augustus which have been acquired, since they relate to some of the most important events of that reign.

The English series has also been considerably improved by the addition of a number of gold pieces, which, added to the accessions of British gold in recent years, make a desirable improvement in that group.

From the numerous medals relating mostly to the recent World War and its issues, one may be chosen for special notice, not as typical of the group, but because exceptional in its execution, as well as in its outstanding interest to our countrymen. This is the medal of the Roosevelt Memorial Association, the portraiture of which is one of the most remarkable achievements in the medallic art of the country, and there have been many successes by American medalists that are in no wise inferior to the best produced anywhere else. Without sacrificing the refinement of the cultivated gentleman, Mr. Roosevelt has been presented as concentrating his rugged forcefulness with striking intensity upon a subject that arouses his soul to its highest endeavors at adequate expression and convincing argument. It is the face of one who sees clearly, feels intensely, and is almost fiercely determined that others shall share his vision and his sentiments. This is withal the Roosevelt of his greatest admirers, probably therefore the real Roosevelt. It is a notable medal.

EMPLOYEES.

The total number of persons employed in the institutions of the Mint Service on June 30, 1921, was 865, as below:

Institution.	Departments.					Total.
	General.	Engraving.	Assaying.	Coining.	Melting and refining.

ORE ASSAYS.

A comparative statement of ore assays made at the minor assay offices since 1915 shows increased use of our facilities by the mining industry as the result of reducing our charge for this service to a nominal sum. The increased number of assays in 1921 seems to indicate revival of prospecting, doubtless incident to the slowing down of business in other lines.

Fiscal year.	Ore assays made.	Amount of charges collected.
1915.....	1,404	\$885.65

LABORATORY OF THE BUREAU OF THE MINT.

From the domestic coinage of the calendar year 1920 the assayer of this bureau tested 1,199 silver coins and 38 gold coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of silver coins above standard (the limit of tolerance being 3 above or below) was 2.2, while the greatest deviation below was 2.6.

The greatest deviation in fineness of gold coins above standard (the limit of tolerance being 1 above or below) was 0.4, while the greatest deviation below was 0.4.

The work of testing certificate bar assaying throughout the service was continued.

The following table summarizes results of coin tests:

Fineness.	Number of silver coins.				Fineness.	Number of gold coins.

ASSAY COMMISSION'S ANNUAL TEST OF COIN.

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the prior year, by a commission of whom part are ex-officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission which met at the Philadelphia mint February 9 to 11, 1921, reported the following results of their examination:

Your committee on counting reports that the packages containing the pieces reserved by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes, were delivered to us by the superintendent of the mint at Philadelphia and upon comparison with the transcripts kept by the Director of the Mint were found to be correct. Several packages were selected from the deliveries of each month from each mint of all denominations coined, and the coins contained therein were counted and found to agree with the number called for in each package. The reserved coins were then delivered to the committees on weighing and assaying.

The committee on weighing have to report that they have weighed the coins shown in an appended list and have found them to be standard within the legal tolerances. The coins were selected at random from those reserved by the mints at Philadelphia, San Francisco, and Denver. The coins were directly weighed against a set of sealed coin weights which were accompanied by a certificate signed by the Director of the Bureau of Standards, Department of Commerce, and which gave the value of the weights in terms of the United States standard. The weighings were made on a Troemner balance supplied by the Philadelphia Mint, which was tested by your committee as to the equality of the arms, and as to its sensibility, which was entirely satisfactory.

The committee on assaying reports that from the coins reserved from the United States mints at Philadelphia, San Francisco, and Denver samples for assay have been taken representing all denominations coined at each mint during each month of the year. The highest assays upon the gold coinage of the different mints (the limit of tolerance being one one-thousandth) are at Philadelphia, 909.2; San Francisco, 900. The lowest assays upon the gold coinage of the different mints (the limit of tolerance being one one-thousandth) are at Philadelphia, 899.8; San Francisco, 899.5. Disregarding the assays upon the high Denver coins mentioned hereafter, the highest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at Philadelphia, 900; San Francisco, 900; Denver, 901.6. The lowest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at Philadelphia, 898.4; San Francisco, 898.2; Denver, 898.4. The committee tested the acid used in the humid assay of silver and found it to contain only a trace of chlorine. The lead foil was found to contain no gold or silver, and the parting silver was ascertained to be free from gold. The balances used were also tested and found to be correct, and the committee deems the assays exhibited to be entirely correct:

ASSAY OF COINS MELTED IN MASS.

Philadelphia, gold, 10 double eagles, fineness 899.9.
 San Francisco, gold, 10 double eagles, and 6 eagles, fineness, 899.6.
 Philadelphia, silver, 47 half dollars, 110 quarter dollars, and 240 dimes, fineness 899.5.
 San Francisco, silver, 22 half dollars, 45 quarter dollars, 80 dimes, fineness 899.4.
 Denver, silver, 14 half dollars, 50 quarter dollars, 110 dimes, fineness 899.5.

The high Denver coins mentioned above were contained in one delivery of quarter dollars, some of which assayed from 898.9 to 899.5, while others assayed from 905.1 to 906.3, being evidently without the legal tolerance. Subsequent investigation disclosed that in some manner a lot of condemned ingots had evidently been worked up into coin instead of being returned to the melting pot. The unissued portion of this delivery of coin has been melted.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1921, is respectfully submitted.

RAYMOND T. BAKER,
Director of the Mint.

HON. ANDREW W. MELLON,
Secretary of the Treasury.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD
AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1920

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1920.

INTRODUCTION.

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Geological Survey, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the survey. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1920 is estimated to have been \$51,186,900, and the production of silver is estimated at 55,361,573 fine ounces. A comparison of these figures with those for 1919 indicates decrease of production of both gold and silver, the former by approximately 9.1 million dollars and the latter by approximately 1.3 million ounces.

Arizona was the only one of the States producing gold in important amounts which shows an increase; this increase was of about \$350,000. The Philippine Islands also show an increase, the amount thereof being about \$425,000. The larger decreases, in round amounts, were made by Colorado, \$2,741,000; California, \$2,587,000; Alaska, \$1,428,000; Nevada, \$1,032,000; South Dakota, \$952,000; and Montana, \$519,000.

Idaho was the only State which largely increased its silver production, the quantity being, in round amount, 1,432,000 ounces; California's increase was 501,000, and Nevada's 436,000 ounces. Large reductions of silver output occurred in Montana, 1,749,000 ounces; Colorado, 800,000; and Utah, 787,000 ounces.

A brief review of mining conditions in each State follows, for which acknowledgment is made to the Geological Survey:

ALASKA.

Alaska mines in 1920 produced gold valued at \$8,365,560, compared with an output of \$9,426,032 in 1919. This reduction was due to the great depression in gold mining throughout the world. The value of silver produced in Alaska in 1920 was \$1,039,364, or \$334,091 more than in 1919.

In 1920 about 53 per cent of the total gold production came from lode mines, compared with 46.6 per cent credited to lode mines in 1919, and 36.6 per cent in 1918.

The auriferous lode mines produced during the year gold valued at \$4,473,687, and silver valued at \$268,458. Seventeen gold-lode mines and five prospects were operated in Alaska in 1920. Twenty-three gold-lode mines were operated in 1919. Of the producing mines

eight were in southeastern Alaska, two on Kenai Peninsula, three in the Willow Creek district, two in the Fairbanks district, and one each in the Kantishna and McKinley districts. In 1920 the average value of the gold and silver contents for all siliceous ores mined was \$1.39 a ton; the average for 1919 was \$1.38 a ton. These averages reflect the dominance in the total lode production of the large tonnage produced from the low-grade ore bodies of the Juneau district.

The copper ores contained \$18,868 in gold and 682,033 fine ounces of silver, valued at \$743,416. The average yield of gold and silver from copper ores was \$0.995 a ton. The value of the placer gold produced in Alaska in 1920 was about \$3,873,000, compared with an output of \$4,970,000 in 1919. This decrease of about 22 per cent was general for all Alaska districts, although the great decrease was in the Yukon camps, where the decline was 31 per cent. Measured by production the Seward Peninsula districts were the most prosperous. The reduction is largely due to conditions that affect gold mining adversely throughout Alaska, and a still greater decrease in the placer gold output of Alaska is to be expected in 1921. Lack of transportation, unfavorable seasonal climatic conditions, and the depletion of bonanza placers have also helped to decrease placer mining. It is estimated that about 488 placer mines were operated in the summer of 1920 and 82 during the previous winter, but many for only a part of the season.

Twenty-two gold dredges were operated in Alaska in 1920, compared with 28 in 1919. Seventeen of these operated on Seward Peninsula; two in the Fairbanks district; two in the Iditarod district; and one in the Mount McKinley (McGrath) district. These dredges handled about 1,633,861 cubic yards of gravel and produced gold valued at about \$1,129,932. In 1919 dredges handled about 1,760,000 cubic yards of gravel and recovered gold worth \$1,360,000. The average gold recovery per cubic yard was about 66 cents in 1920, and 67 cents in 1919. Up to the end of 1919 gold to the value of \$21,524,932 had been mined by dredges.

ARIZONA.

The value of the mine output of gold, silver, copper, lead, and zinc in Arizona in 1920 was \$114,628,584, an increase from \$111,157,872 in 1919, according to V. C. Heikes, of the United States Geological Survey. After 1919, which was a rather dull year, mining conditions in Arizona improved in 1920, and the output of gold, silver, copper, and lead was greater, though the output of zinc was less.

The gold production had a value of \$4,786,122, an increase of \$279,709 from that of 1919. Mohave County, with \$2,852,141, was first as a gold producer. Cochise County took second place, with \$919,167, followed by Yavapai County with \$659,541. The largest part of the gold, or \$2,873,422, had its source in bullion from ore treated by amalgamation or cyanidation. Crude ore shipped directly to smelters contained \$1,514,950, and concentrates, \$390,739. The gold from deep mines was derived from the following sources: Siliceous ore, \$3,090,812; copper ore, \$1,579,378; lead ore, \$110,640; and copper-lead ore, \$725. Gold from siliceous ore increased decidedly as a result of operations at Oatman, in Mohave County, but gold from copper ore was less than in 1919 in spite of the increase in

the output of copper. Nearly 98 per cent of the States's gold came from copper ore and siliceous ore combined. Placers produced only \$4,567 in gold. With each million pounds of copper the gold output was increased \$2,830 in 1920. Most of the output came from gold ores of the San Francisco district, which were sufficiently rich to pay the costs of mining and milling. Though expenses in 1920 were somewhat less than in 1919, many producers of low-grade ore were still unable to operate. In 1920 the largest producers of gold were the United Eastern and Tom Reed companies at Oatman, both of which treat gold ore, and the Calumet and Arizona, United Verde, Copper Queen, Arizona Blue Bell, and United Verde Extension mines, from which gold is recovered by the smelting and refining of copper ore.

The silver output amounted to 5,355,303 ounces, an increase of 88,698 ounces, or more than 1 per cent. The value of the output decreased \$61,318 on account of the price, which was \$1.09 per ounce in 1920. Of the total silver, Cochise County alone produced 2,314,977 ounces, and Yavapai County followed with 1,555,075 ounces. The output from Cochise County was less than that of 1919, but the output from Yavapai County was much greater. Most of the silver, or 4,070,064 ounces, came from crude ore shipped to smelters; concentrates contained 1,125,502 ounces, and the gold and silver bullion, 129,671 ounces. The sources of the silver output were as follows: Siliceous ore, 1,051,982 ounces; copper ore, 3,716,246 ounces; lead ore, 521,441 ounces; and copper-lead ore, 65,619 ounces. Eight mines in Arizona produced more than 140,000 ounces of silver each in 1920. These were the United Verde, Calumet & Arizona, Copper Queen, Shattuck, Bunker Hill, United Verde Extension, Magma, and Commonwealth mines.

There were 318 mines producing during the year, of which number only 8 were placer mines. The ore output was 14,920,478 tons, a decrease of 193,075 tons. Of the total ore, 10,296,849 tons was concentrated to make 635,817 tons of concentrates, 2,441,591 tons was shipped directly to smelters, 203,046 tons was treated in gold and silver mills, the remainder being made up by slag, old tailings, and ore leached.

Arizona is the largest copper-producing State, and the output in 1920 was 558,256,302 pounds, an increase from 538,100,844 pounds in 1919; the lead output was 14,599,765 pounds; and the recoverable zinc output was 1,457,296 pounds.

CALIFORNIA.

The general conditions in the gold mining industry in California in 1920 were such that all the larger gold mines curtailed operations more or less, many of them to the extent of 50 per cent, and numbers ceased work for a time, while others closed permanently and allowed the mines to fill with water. The small deep gold mine producers were much fewer in number than usual and had lessened outputs. Reports from the placer mines showed a depression in all forms of gravel mining—dredge, hydraulic, drift, and surface—and the total gold yield from these sources was nearly \$1,000,000 less than in 1919. The deep mines, however, were in a worse condition, the deficit for the year being nearly \$1,500,000 as compared with 1919. In these

mines the cost of producing an ounce of gold had been gradually rising until it reached \$19.15 in 1920 against a cost of \$9.51 in 1913, even among the larger properties having fully equipped and carefully managed reduction plants.

According to Charles G. Yale, of the United States Geological Survey, who annually makes reports on conditions of gold mining in California, there were 500 metal mines of all kinds reporting production in 1920. Of the deep mines 256 were gold and silver mines, 10 copper, 34 lead, and 1 zinc. Included among those classified in the first class are a number of purely silver mines, most of them in San Bernardino and Inyo Counties. Of the 199 placer mines reporting production, 51 were hydraulic, 40 dredges, 45 drift, and 63 surface or sluicing mines. The dredges are enumerated by number of boats at work.

The total gold produced in California in 1920 was valued at \$14,311,043, which is \$2,384,912 less than in 1919, and the lowest record of the State since 1894. For this loss in output the deep mines are responsible for \$1,412,449 and the placers for \$972,463. Most of this loss in the placers was due to decreased output of the dredges, which for the first time since dredging in the State began shows a marked falling off in annual yield. The gold yield of \$6,900,366 from dredges in 1920 is \$816,553 less than in 1919. The dredges produced 48 per cent of the total gold from all sources in California in 1920, and about 98 per cent of the placer gold. Without the dredges, placer mining in California would be at a very low ebb. The hydraulic, drift and surface claims produced considerably less than 1 per cent of the placer gold. The deep mines of the State produced 51 per cent of the total gold mined in 1920.

Since dredging began in California in 1898 there has been a total output of gold from this source of \$117,236,197 to the end of 1920. Of this total \$31,338,086 was derived from the Oroville or Feather River field in Butte County, not including \$2,496,890 from adjacent dredging fields in the same county; \$26,813,403 from the Folsom or American River field in Sacramento County; and \$39,511,478 from the Marysville or Yuba River field in Yuba County. The rest of the total came from smaller fields in Amador, Calaveras, Placer, San Joaquin, Shasta, Siskiyou, Stanislaus, and Trinity Counties.

Some of the dredges in outlying districts have worked out their available ground, but new dredges, or rebuilt ones, have started in new though generally small areas elsewhere. Very large and expensive dredges continue to be built for the larger fields, except at Oroville, Butte County, where the available area of profitable ground is now quite small, most of the area having been worked out during operations begun in 1898, this being the oldest of the larger field. Since the close of the year 1920 a greatly increased gold output is being made in Yuba County field where the most expensive dredges, of the greatest capacity, are in operation. The latest steel dredge of improved design cost about \$650,000, so that the equipment alone for a large dredging field requires a large capital investment. There are 10 dredges, most of them modern and of large capacity, now operating in the Yuba River field.

There were 28 counties in California which showed more or less gold production in 1920. Five counties produced more than \$1,000,000 each, as follows: Yuba, \$3,467,759; Nevada, \$2,872,471;

Amador, \$1,788,793; Sacramento, \$1,575,053; and Calaveras, \$1,439,567.

Nevada County produced the most deep-mine gold. The leading producer of gold by dredges (and "banner" producer) was Yuba. The gold output from hydraulic mines was largest in Siskiyou; in drift mining from Butte; and in surface placers from Fresno. The only counties which showed increase in gold yield in 1920 were Sierra, Mono, Butte, San Bernardino, Stanislaus, Plumas, and Mariposa.

The so-called Mother Lode of California is exploited in five counties—Amador, Calaveras, El Dorado, Mariposa, and Tuolumne. The deepest and highest developed of these mines are in Amador County. From these counties combined, 38 per cent of the total ore milled or treated in the State was derived. The output of siliceous ore in these counties in 1920 was 440,743 tons, which was 319,930 tons less than in 1919, but the value per ton has risen from \$6.27 in 1919 to \$7.85 in 1920.

The recovery in batteries and plates from ore, from all counties, sent to gold and silver mills, averaged \$8.34 per ton in gold and \$0.16 in silver. The recovery from all concentrates treated was \$24.22 in gold and \$6.34 in silver per ton. Crude ore of all kinds shipped to smelter averaged \$8.28 in gold and \$45.47 in silver per ton. Old tailings treated averaged \$1.50 per ton gold and \$0.76 silver.

The total quantity of ore treated in gold and silver mills in the State in 1920 was 721,180 tons, or 349,630 tons less than in 1919, which accounts for the large reduction in the output of deep mines.

The siliceous ores yielded an average of \$10.80 per ton in gold and silver; the copper ores \$0.67; and lead ores \$11.05. In 1920 gold and silver mills and concentrating plants treated 1,099,706 tons of ore, with a total value of \$7,293,626, and an average value per ton of \$6.63 in gold and silver.

The silver produced in the State in 1920 amounted to 1,706,327 fine ounces, valued at \$1,859,896, an increase in quantity of 599,138 ounces and \$619,845 in value. The silver from deep mines was 1,676,427 ounces and that from placers 29,900 ounces. The largest output of silver was from San Bernardino County, which yielded more than a million ounces. Inyo, Plumas, and Shasta Counties were the next largest producers. The increase in yield of silver was owing to the very large output of the California Rand Silver property in San Bernardino County, a mine producing silver ore carrying some gold. There were 18 mines which yielded siliceous silver ore in that county in 1920. Silver obtained from the treatment of copper ores was 179,752 ounces, and that from lead ores 252,704 ounces.

COLORADO.

Notwithstanding curtailment of operations in November and December in many mining districts of Colorado, the production of metals from ore mined in the State in 1920, according to Charles W. Henderson, of the United States Geological Survey, was \$7,576,319 in gold, 5,409,335 ounces of silver, 46,629,788 pounds of lead, 4,043,734 pounds of copper, and 48,790,742 pounds of zinc, as compared with \$9,886,627 in gold, 5,758,010 ounces of silver, 37,070,241 pounds of lead, 3,560,207 pounds of copper, and 37,220,493 pounds of zinc in

1919. These figures show a decrease for gold of \$2,310,308 and for silver of 348,675 ounces, but an increase of 9,559,547 pounds for lead, of 483,527 pounds for copper, and of 11,570,249 pounds for zinc. The increase in the output of lead, copper, and zinc can be attributed almost wholly to the fact that the Sunnyside Co.'s new 500-ton concentration-flotation mill at Eureka, San Juan County, began operations early in 1920 and continued operations throughout the year, producing both lead-copper and zinc concentrate.

The three lead-smelting plants at Pueblo, Durango, and Leadville were operated steadily on ores from Colorado and Idaho and zinc residues from Oklahoma, and at a slightly increased capacity over that of the closing days of 1919. The Salida smelter was closed in February, but had not been in the market for ores for several months before that date. The United States Zinc Co.'s retort furnaces and zinc oxide plant at Pueblo were not operated to capacity. The zinc oxide plant at Leadville continued operations on low-grade zinc carbonate ores, and as a result of reorganization assuring a steady supply of zinc carbonate ores from the Downtown mines, a new block of furnaces was completed in August; but it was not placed in operation because of the waning market for zinc oxide. The Ohio zinc oxide plant at Canon City was operated until early in December on zinc carbonate ores from Leadville and from camps in Utah and Nevada. The Empire Zinc Co. constructed and set in operation as a trial a very modern zinc oxide plant at Canon City, where is situated also that company's magnetic separation plant, which has been successfully operated for many years on Leadville zinc sulphide ores. This magnetic separation plant was also closed in November. The River Smelting & Refining Co.'s plant at Florence for the treatment of low-grade copper-lead-zinc ores by the matting and fuming process was operated until December. The General Chemical Co., at Denver, continued to purchase pyritic silver ores for the manufacture of sulphuric acid, but did not operate the magnetic separation wet concentration mill formerly operated by its predecessor, the Western Chemical Co., on Leadville zinc-lead ores.

The Cripple Creek gold district in Teller County labored under the difficulties of high costs and the unchanging value of gold, but produced \$4,323,998 as compared with \$5,827,816 in 1919. The Portland Independence mill treated a large quantity of dump and low-grade mine ores. The Golden Cycle mill at Colorado Springs treated the greater part of the mine ore shipped from Cripple Creek. This mill also purchased gold ores from Boulder County and from Leadville.

The Leadville district, with its variety of smelting and milling ores, and with its location as a smelting center for ores from other Colorado districts (and from other States), was at a low ebb at the end of 1919, but receipts at the smelter increased slightly during 1920, and four furnaces were operated at the Arkansas Valley smelter for the greater part of the year. From the mines at Leadville, the heaviest decreases were in shipments of silver-bearing pyritic ore and of lead-zinc sulphide ores. Shipments of iron-manganese-silver fluxing ores were slightly larger than in 1919. Shipments of lead ores increased slightly. Zinc carbonate ores were shipped in quantity equal to that of 1919. Siliceous oxide and sulphide gold ores fell off in number of tons shipped but contained an appreciably increased

quantity of gold, because of the discovery and shipment of much very high-grade gold ore in small lots. For trial purposes over 1,000 tons of gold-bearing iron sulphide ore were shipped early in the year to the Golden Cycle cyanidation mill at Colorado Springs. Much experimental work was done to test the adaptability of the flotation process to the lead-zinc and pyritic ores of the district. The Derry Ranch dredge, below Leadville, resumed operations in May after the usual enforced idleness during the winter, and was successfully operated until December. Considerable silver ore was shipped from the mines across the Arkansas Valley, in the Sugar Loaf-St. Kevin districts.

Breckenridge, with its lead carbonate and zinc and lead sulphide ores and its four gold dredges, increased its output of zinc 100 per cent, and the dredges produced \$374,072 in gold, as compared with \$460,524 in 1919.

Much development work was done on the zinc deposits at Red Cliff, and zinc sulphide milling ore was shipped from this camp to Canon City and pyritic silver ore to the lead smelter at Leadville.

The mines at Aspen, Pitkin County, maintained a fairly large production of lead and silver until operations were curtailed in December. The lower levels at the Smuggler mine remained under water. From the deposit of lead-zinc ore discovered at Lenado, near Aspen, considerable ore was shipped during the year. Driving continued at the long crosscut adits in Tourtelette Park, with the objectives in sight at the close of the year.

San Juan County showed a very large increase in metal output. The Sunnyside Co., at Eureka, after a long building program and many setbacks by fire and snowslides, began milling early in 1920 a large quantity of mixed lead-zinc ores. The Iowa-Tiger mine, at Silverton, continued production until December under lease.

San Miguel County mines were active in development, new construction work, and milling, and maintained the usual production of silver, but the gold production decreased appreciably. Early in the year the Tom Boy Co., at Telluride, set in operation its new oil-flotation concentration mill. The Smuggler Union continued operations and development work, including the erection of a new flotation mill, which unfortunately was destroyed by fire, but is now replaced by a new mill of concrete construction. The Liberty Bell Co., which has operated its property successfully since 1896, with a shutdown in the winter of 1919-20, decided in the spring to continue operations. The Belmont-Wagner mill began regular operations at its Alta mines and mills, where much building and development work had been done during 1918 and 1919.

Though not as actively as in the last few years, mining continued at Red Mountain, Ouray, and Sneffels, and the Camp Bird Co. continued development from its adit, which in 1919 had cut the vein 500 feet below the level of previous successful operations. At Lake City, Hinsdale County, some new development work was done and some shipments made. The production of silver and lead from Creede, Mineral County, was less than in 1919. Dolores County's shipments of ore were less in 1919 and were confined chiefly to silver and silver-lead ores.

Clear Creek County's production was less than usual. In May the Colorado Central mill, at Georgetown, a large producer in 1919 of

silver concentrates from old dumps was closed. The Wasatch mill, at Silver Flume, however, resumed operation during the year, yielding silver-lead and zinc concentrates. The Gem mines, at Idaho Springs, were reopened under new management and with the acquisition of adjacent property. Gilpin County's yield from the Argo tunnel had practically ceased with the closing in 1919 of the Argo mill and Tremont mines, but there was considerable development work and production at several mines at Russell Gulch, Black Hawk, Central City, and Apex. Boulder County's silver districts—Caribou, Sugar Loaf, and Ward—produced the bulk of the 148,834 ounces of silver credited to that county for 1920, as compared with 225,484 ounces in 1919.

Custer County silver mines continued production at several properties that had been revived in 1918 and 1919. Drilling of placer areas near Fairplay, Park County, has resulted in the digging of a pit for the installation of a dredge.

CENTRAL STATES.

As in 1919 only three of the Central States—Michigan, Missouri, and Illinois—produced silver in 1920. The total production in 1920 was 589,516 ounces, valued at \$642,566, against an output of 536,271 ounces in 1919.

No silver ore was shipped in 1920, and of the total production of silver 470,189 ounces came from the copper lodes of Michigan, an increase of 28,759 ounces.

The silver production of Missouri was 111,128 ounces, compared with 90,401 ounces in 1919. There was a larger quantity of lead silverized and 82,464 ounces of silver were recovered from this source. Very little silver was derived from copper ores, but a large part of the Missouri silver (28,664 ounces) was obtained from the copper-nickel-cobalt ores of the Missouri Cobalt Co. in Fredericktown, Mo.

From the lead concentrates derived from southern Illinois fluorspar ores, 8,193 fine ounces of silver were recovered. This was 3,753 ounces more than in 1919, and the average recovery per ton of concentrates smelted was 6.55 ounces in 1920, against 6.21 ounces in 1919 and 6.65 ounces in 1918. The largest producers of galena concentrates containing silver were the Fairview Fluorspar & Lead Co. and the Rosiclare Lead & Fluorspar mines.

EASTERN OR APPALACHIAN STATES.

The mine production of gold in the Eastern or Appalachian States increased from 341.14 fine ounces, valued at \$7,052, in 1919, to 411.91 ounces, valued at \$8,515, in 1920, of which Georgia produced \$732; Tennessee, \$5,830; North Carolina, \$1,147; South Carolina, \$332; Alabama, \$296; and Massachusetts, \$178. The production from placer mines increased from \$715 in 1919 to \$1,182 in 1920, and that from deep mines from \$6,337 in 1919 to \$7,333 in 1920. A few small placer mines were operated in North Carolina and South Carolina and none of the gold-milling plants were operated other than for experimental purposes. The low-grade bodies of ore and the scarcity and high cost of labor and supplies resulted in the practical suspension of activity at both deep and placer gold properties. The gold recovered

from siliceous ores was only 36.58 fine ounces, while that obtained from copper ores decreased from 301.23 fine ounces in 1919 to 282.02 ounces in 1920. All the gold recovered from copper ores was from copper mines in the Ducktown district in Tennessee.

The mine output of silver in 1920 was 112,183 fine ounces, valued at \$122,279, an increase of 7,493 ounces, and of \$5,026 in value compared with the production in 1919. All the silver except 1,374 ounces was derived from copper ores, of which 110,719 ounces were credited to Tennessee and 90 ounces to Pennsylvania. The silver from lead ores, 1,353 ounces, was from Massachusetts and Georgia. Only 16 ounces of silver came from siliceous ores and 5 ounces was contained in placer bullion.

Value of estimated production of gold in the southern Appalachian States, 1799-1920, by States.

Alabama.....	\$766, 632
Georgia.....	17, 825, 268

North Carolina.....	23, 629, 580
South Carolina.....	5, 181, 842
Tennessee.....	264, 502
Virginia.....	3, 296, 569
Total.....	51, 035, 798

IDAHO.

In 1920 the total value of the metal output of Idaho was \$31,170,176, or an increase of \$12,795,861 over that of 1919, according to C. N. Gerry, of the United States Geological Survey. Of this total, the gold was valued at \$485,590; silver, \$7,986,205; copper, \$467,065; lead, \$19,968,798; and recoverable zinc, \$2,262,518. After the labor strike of 1919, mining conditions improved somewhat in 1920, and the output of silver, lead, and zinc in Idaho was greater.

Gold decreased from \$713,238 in 1919 to \$485,590 in 1920. Of this total the placer gold amounted to \$113,814, against \$190,752 in 1919. The gold won by dredges was valued at \$101,679, a decrease from \$164,854 in 1919. Siliceous ore produced more gold than any other kind, or \$285,403. Gold in copper ore was valued at \$29,327; lead ore, \$51,622; lead-zinc ore, \$3,443; and copper-lead ore, \$1,981. Boise County was the largest gold producer and Shoshone County followed, on account of the dredge operations near Murray. The decrease in the production of gold was general, though the output from Custer County was more than that of 1919. Gold in crude ore shipped directly to smelters had a value of \$53,211; gold in concentrates, \$95,990; and gold in ores amalgamated and cyanided, \$222,574. In 1920 more than 82 per cent of Idaho's gold came from placers and siliceous ore. Many of the gold mines were idle in 1920, as the cost of mining was still unusually high. The four largest gold producers in 1920 were the Gold Hill and Iowa mine at Quartzburg, the Yukon Dredging Co. at Murray, the Empire Copper Co. at Mackay, and the Ulysses mine near Salmon.

The silver output was 7,326,794 fine ounces, an increase of 1,747,738 ounces. The greatest production, and also the largest increase occurred in Shoshone County. The production of silver in Custer

County was also considerably greater than that of 1919. The value of the output increased to \$7,986,205, as a result of the high price for the metal. Most of the production of silver came from lead ore and lead-zinc ore, the former supplying 6,091,408 ounces and the latter 862,435 ounces. Copper-lead ore supplied 225,181 ounces; siliceous ore, 91,752 ounces; copper ore, 52,029 ounces; zinc ore, 2,870 ounces; and placers, 1,119 ounces. Concentrates of various kinds supplied 5,457,724 ounces of silver; crude ore shipped to smelters, 1,864,287 ounces; and bullion from gold and silver mills, 3,664 ounces. The Coeur d'Alene region alone produced 6,386,663 ounces of silver. In 1920 five mines in Idaho produced more than 500,000 ounces of silver each. They were the Hercules mine at Burke, the Bunker Hill and Sullivan property at Kellogg, the Hecla at Burke, the Morning mine near Mullan, and the Tamarack and Custer mine near Sunset.

There were 163 mines producing during the year, of which 49 were placer mines and 114 deep mines. The total ore mined and treated was 1,958,401 tons, an increase of 501,006 tons over the total of 1919. Of this tonnage, 1,643,902 tons was concentrated, 101,986 tons was shipped directly to smelters, and 38,570 tons was treated in gold and silver mills; the remainder, 173,943 tons, being old tailings retreated. The mines of Idaho also produced 2,538,396 pounds of copper, 249,609,976 pounds of lead, and 27,932,326 pounds of recoverable zinc. The Bunker Hill smelter and refinery at Bradley, Idaho, were active throughout 1920, treating ore and concentrate principally from the Coeur d'Alene region. Shipments of ore and concentrate were also made to smelting plants in Utah, Montana, Washington, and California.

MONTANA.

The mine output of gold, silver, copper, lead, and zinc in Montana in 1920 had a total value of \$65,573,047, an increase of \$3,535,856 over that of 1919, according to C. N. Gerry, of the United States Geological Survey. The output of silver, copper, and zinc was greater than that of 1919, but the output of gold and lead was less. The mines, mills, and smelters at Butte, Anaconda, and Great Falls were not operated at their greatest capacity.

The gold output was valued at \$1,851,165 in 1920, a decrease of \$378,423. Of this total \$1,562,219 came from deep mines and \$288,946 from placers. Most of the placer gold was won by dredge operations in Alder Gulch, of Madison County, but production from this source continues to decrease. As in former years, the gold was derived principally from siliceous ore, which was the source of \$936,298 in gold. Gold from other sources was as follows: Copper ore, \$386,995; lead-zinc ore, \$106,313; lead ore, \$63,759; zinc ore, \$64,124; and small amounts from copper-lead ore, and copper-lead-zinc ore. Crude ore shipped to smelters contained gold valued at \$402,339; concentrates, \$575,479; bullion from amalgamation and cyanidation mills, \$533,798; and \$50,603 from old tailing, slag, and ore leached. Many of the mines producing low-grade gold ore remained idle on account of the expense of mining. In 1920 eight mines in Montana each produced gold valued at more than \$40,000. These were the Barnes King mines at Marysville, copper property of the Anaconda Co. at Butte, the Conrey placers at Ruby, North Moccasin at Kendall, the Jardine at Jardine, the zinc property of

the Anaconda Co. at Butte, the Holdfast near Southern Cross, and the Butte and Superior at Butte.

The silver output increased from 12,541,181 ounces in 1919 to 12,579,178 ounces in 1920, an increase of 37,997 ounces. The value of the output was \$13,711,304, a decrease of \$334,819. Silver Bow County, principally the Butte region, produced 10,575,894 ounces, and Granite County was next with 656,099 ounces. Of the total silver, 8,969,000 ounces was derived from concentrates, 2,816,962 ounces from crude ore, 37,255 ounces from bullion produced at gold and silver mills, 2,210 ounces from placers, and the remainder, 753,751 ounces, from old tailings, slag, and ore leached. Separated as to kinds of ore, copper ore supplied most of the silver, or 6,030,507 ounces; lead-zinc ore was next with 2,531,685 ounces; and siliceous ore followed with 2,000,162 ounces. Zinc ore produced 1,166,634 ounces, lead ore 800,856 ounces, copper-lead ore 38,685 ounces, and copper-lead-zinc ore 8,439 ounces. Ten mines produced more than 250,000 ounces of silver each in 1920. These were the copper property of the Anaconda Co., zinc mines of the Anaconda Co., Butte and Superior, Elm Orlu, Davis Daly, North Butte, Granite Bimetallic, Cascade, slime ponds at Anaconda, and East Butte mines.

There were 457 producing mines, of which 392 were deep mines and 65 were placer properties. The total output of ore was 5,241,615 tons, an increase of 1,058,021 tons over that of 1919. Of the total, 3,273,347 tons was concentrated, 182,071 tons was shipped directly to smelters, 78,443 tons was treated in gold and silver mills, and 1,707,754 tons of ore, slag, and old tailings was either smelted, concentrated, or leached. In addition to gold and silver, the deep mines of the State produced 177,059,260 pounds of copper, 31,253,916 pounds of lead, and 184,337,786 pounds of recoverable zinc.

NEVADA.

The total value of the production of gold, silver, copper, lead, and zinc in Nevada was \$23,879,512, an increase of \$446,341, according to V. C. Heikes, of the United States Geological Survey. The output of silver, lead, and zinc was greater than that of 1919, but gold and copper were less. The value of the production was less than half that of 1918, when the mines produced metals valued at \$48,528,124.

The gold output in 1920 had a value of \$3,566,728, as against \$4,541,502 in 1919. This decrease of \$974,774 was due in large part to the curtailed output from Goldfield in Esmeralda County, which was formerly the largest gold-producing district in the State. The production of gold from the silver ores of the Tonopah district of Nye County was greater on account of the effort to mine ore containing silver for which a high price was paid. The Nevada Consolidated was the largest producer of gold in 1920 and the Elgoro mine at Jarbidge took second place. Other mines which produced gold valued at more than \$100,000 each during the year were the Tonopah Belmont, Tonopah Extension, West End, Consolidated Virginia, Tonopah Mining, Round Mountain, Fairview Round Mountain, Rochester Silver, and Elko Prince mines. Separated as to source, most of the gold, or an amount valued at \$2,812,579, came from siliceous ore. Copper ore supplied gold valued at \$473,885; placers, \$152,639; lead ore, \$66,915; copper-lead ore, \$60,701; and lead-zinc ore, \$9. Gold valued at \$2,577,619 was recovered at gold and silver mills by amal-

gamation and cyanidation; concentrates contained gold valued at \$498,043; crude ore, \$320,885; and old tailings and slag, \$17,542.

The production of silver in 1920 was 7,745,093 ounces, against 6,863,580 ounces in 1919, an increase of 881,513 ounces. The mines of Tonopah, in Nye County, produced most of the silver of the State, 4,816,055 ounces in 1920, against 3,568,875 ounces in 1919. Production from this district had been decreasing, but the price of silver stimulated production in 1920. The Rochester district produced 620,047 ounces of silver in 1920, the Pioche district 333,382 ounces, and the Comstock district 324,744 ounces. Seventeen mines in 1920 produced more than 100,000 ounces of silver each. Eight of these which produced more than 200,000 ounces each were the Tonopah Belmont, Tonopah Extension, West End, Tonopah Mining, Rochester Silver, Montana Tonopah, Tonopah Divide, and Jim Butler mines. Most of the silver of the State, 6,940,579 ounces, had its source in siliceous ore, the greater part of which was cyanided. Silver from lead ore amounted to 520,971 ounces, copper-lead ore 113,358 ounces, lead-zinc ore 83,912 ounces, copper ore 82,977 ounces, and placers 3,296 ounces. Gold and silver mills recovered 6,259,878 ounces of silver, crude ore smelted contained 1,158,332 ounces, and concentrates 301,077 ounces.

The production of copper in 1920 was 50,559,763 pounds, valued at \$9,302,996, a small decrease from the output of 1919. The Nevada Consolidated copper plant at Ely was operated at greatly reduced capacity and the Mason Valley plant at Thompson was idle. The output of lead increased to 21,263,700 pounds in 1920 and recoverable zinc to 10,698,040 pounds.

There were 473 mines producing in Nevada in 1920, of which 39 were placer mines and 434 were deep mines. The output of ore increased from 3,187,831 tons in 1919 to 3,480,620 tons in 1920. Of this total, 2,622,053 tons was concentrated, making 367,107 tons of concentrates; 648,871 tons was treated by amalgamation or cyanidation, and 171,573 tons was shipped directly to smelting plants.

NEW MEXICO.

Bullion, ore, and concentrate shipments from New Mexico mines in 1920, according to Charles W. Henderson, of the United States Geological Survey, contained in recoverable metals \$480,302 in gold, 768,042 ounces of silver, 2,869,525 pounds of lead, 54,400,691 pounds of copper, and 10,013,580 pounds of zinc. Comparative figures for 1919 (revised) were \$655,656 in gold, 837,418 ounces of silver, 2,886,513 pounds of lead, 51,150,539 pounds of copper, and 7,594,644 pounds of zinc. The metals showing an increase were copper and zinc, and the decreases for silver and gold were comparatively large. There were 92 producing mines in 1920, of which 86 were deep and 6 placer, a decrease of 33 deep mines and a decrease of 3 placers.

The Mogollon district, Socorro County, continued to hold its place as the principal silver-producing district in New Mexico, with an output of 329,489 fine ounces, as compared with 382,800 fine ounces in 1919, and its output of gold was \$125,631 in 1920 as compared with \$148,136 in 1919. The Fannery cyanidation mill at Mogollon was idle in 1920, but the Mogollon Mines Co.'s cyanidation mill was operated steadily on ores from the Top, Dutch Boy, Black Bird, and other mines. The output of gold from the Aztec mine, at Baldy,

suffered another decrease. The shipments of gold and silver bearing siliceous copper ores from Lordsburg decreased, but these copper ores and certain silver ores shipped in 1920 contained \$153,461 in gold and 182,000 ounces of silver, as compared with \$175,008 in gold and 242,773 ounces of silver in 1919. There were no shipments of gold-bearing iron-copper ores from Orogrande in 1920, and only small quantities of gold and silver were contained in ore shipped and placer bullion recovered at Pinos Altos. The Whiteoaks district continued to produce a small quantity of gold by amalgamation. Some gold and silver is contained in the copper concentrate of the Burro Mountain mill at Tyrone and of the Chino Copper Co.'s mill at Hurley. The lead ores from Gage, Luna County, also contained some silver and gold. The reopening of mines in Sierra County, at Chloride, Lake Valley, Hillsboro, and Kingston, resulted in an output in 1920 for that county of \$15,896 in gold and 117,089 ounces of silver, as compared with \$3,948 in gold and 67,658 ounces of silver in 1919.

OREGON.

The total production of gold in Oregon in 1920 was \$1,017,490, or about \$40,000 more than in 1919. Of this total, \$566,373 was derived from deep mines and \$451,117 from placers of various kinds, the deep mines showing some reduction in yield as compared with 1919, but the increased output of the placers, including the dredges, more than offset the decrease from the deep mines.

According to Charles G. Yale, of the United States Geological Survey, the Oregon miners in 1920 suffered from the same causes or conditions as did gold and silver miners in other Western States. The cost of labor and supplies was excessive and prevented full-time work in the productive mines and closed some of them altogether. These causes also almost stopped prospecting and prohibited the starting of any new mining enterprises of note. There is this encouragement, however, to be noted, that the downward trend of production, apparent for several successive years, has apparently been checked.

There were only 65 gold mines in Oregon which reported production in 1920. Of these 18 were deep mines, 33 hydraulic, 4 dredges, and 10 surface or sluicing placers. The small increase shown in gold output was due to the operations of the dredge and hydraulic mines, all other classes showing some falling off. The largest yield from any one county was from Baker, as usual, and amounted altogether to \$890,380. Grant was the next county in rank of yield, with an output of \$69,453. Other producing counties in order of relative rank as named were Josephine, Jackson, Coos, Douglas, Curry, Wheeler, and Malheur.

The southwestern counties in Oregon which contain an extension of the California gold belt are Benton, Coos, Curry, Douglas, Jackson, Josephine, and Lane. These counties (with the exception of Benton and Lane, with no output) had a combined production of \$57,250 in gold and 325 ounces of silver, valued at \$353, a total of \$57,603, mostly from placers, and \$15,000 less than in 1919.

Northeastern Oregon comprises the counties of Baker, Crook, Harney, Malheur, Umatilla, Wallowa, and Wheeler, and gold was produced in three of them—Baker, Malheur, and Wheeler—to the amount of \$890,787. Virtually all of this came from Baker County. The

decrease in gold in this region in 1920 was about \$14,000, as compared with 1919. The total silver yield of the three counties was 76,432 ounces, valued at \$83,308.

The silver yield of Oregon from deep-mine ores and placers in 1920 was 82,743 fine ounces, valued at \$90,190, or about 28,000 ounces less than in 1919. The largest output of silver (76,429 ounces) came from Baker County. Grant County came next with 5,986 fine ounces. Of the deep-mine silver, 59,000 fine ounces, valued at \$64,310 came from gold mines and 18,890 fine ounces, valued at \$20,590, from the treatment of copper ores.

The gold and silver mills in Oregon in 1920 treated 36,536 tons of ore and tailings yielding 13,860 ounces of gold and 42,864 ounces of silver. From 46,333 tons of ore shipped to concentrating plants was obtained 8,604 tons of concentrates, producing gold valued at \$256,690 and 33,860 fine ounces of silver. The 967 tons of ore smelted yielded 1,966 ounces of gold and 7,433 ounces of silver. The total quantity of ore treated in Oregon in 1920 was 82,156 tons, which averaged \$7.93 per ton in gold and silver.

The placer mines of the State produced \$451,117 in gold in 1920, which was an increase of \$70,466 over the year 1919. The hydraulic mines produced \$88,604, or \$13,588 more than in 1919; the drift mines \$1,321 less; and the surface placers and dredges \$362,513 in gold, or \$58,197 more than in the previous year. Three of the dredges reporting production in Oregon in 1920 were in Baker County and the other in Grant County.

The most productive and largest mining operation in Oregon in 1920 was that conducted by the Homestead Iron Dyke, a copper property. The next in importance among the deep mines was the Cornucopia, which, like the Iron Dyke, is in Baker County. The most productive placer is that of the Powder River Dredge Co., Sumpter, Baker County; and the most productive hydraulic mine was the Esterly, at Waldo, Josephine County.

SOUTH DAKOTA.

The Black Hills of South Dakota, including Lawrence, Custer, and Pennington Counties, on the western border of the State, have produced from 1876 to 1920, inclusive, a total of \$223,623,669 in gold and 6,800,993 ounces of silver. In 1920, production was confined to mines in Lawrence County. Bullion produced from ore mined and reduced in 1920 and ore shipped in 1920 contained \$4,676,470 in recoverable gold and 98,966 ounces of silver, as compared with \$4,863,040 in gold and 116,493 ounces of silver in 1919. The smelting ore shipped in 1920 carried 12,812 pounds of lead. There were seven producing mines, of which three were deep and four placer, a decrease of six deep mines and an increase of one placer.

The Homestake mine at Lead has been the principal producing mine in South Dakota since the beginning of mining in 1875. This property in 1920 produced bullion valued at \$4,410,194. This mine had been flooded in October, 1919, in order to extinguish a fire which had started September 25, 1919, on the 800-foot level. Unwatering of the mine began in December, 1919, and was continued for the first four months of 1920. By March 11, 1920, at the various mills of this property there were in operation 920 stamps (of the total of 1,020 stamps used for crushing). Labor shortage, which had curtailed

operations in 1918 and 1919, continued throughout the greater part of the year 1920, and during the summer and fall none of the Homestake mills were operated at full capacity, and one of them, the Monroe mill, was idle from August 16 to December 1. In November the labor supply improved and before the close of the year the supply was equal to the demand. The Trojan mine was the only other large property operated in 1920. The Trojan cyanidation mill treated a small quantity of custom ore from nearby properties. In the course of development at the New Silver Queen mine, at Galena, several cars of lead oxidized ore were mined and shipped to smelters. Placer mines at Tinton produced 27.91 fine ounces of gold. At the close of the year the "Carbonate Tunnel" reached its objective and cut the old workings of Iron Hill at a depth of 300 feet, draining the property.

TEXAS.

Texas mines in 1920 yielded 511,401 ounces of silver and a small quantity of copper.

Since the beginning of mining in Texas in 1885, the output of silver has been 15,293,734 fine ounces, having a commercial value of \$10,925,133. The greater part of this silver has come from the Presidio silver mine, in the Shafter district, Presidio County.

UTAH.

The value of the gold, silver, copper, lead, and zinc in Utah in 1920 was \$49,744,334, according to V. C. Heikes, of the United States Geological Survey. The value of the output increased about 10 per cent over that of 1919 on account of the increase in the production of silver, lead, and zinc. The production of gold and copper, however, was less. Metal prices were high, but the expenses of mining, shipping, and smelting were excessive.

The gold output was valued at \$2,014,556, a decrease of \$144,915 over that of 1919. Of this total, Salt Lake County produced \$1,067,947 in gold and Juab County produced \$559,132. Separated as to source, siliceous ore was most important, containing gold valued at \$689,364. Copper ore supplied \$658,305 in gold; lead ore, \$375,937; lead-zinc ore, \$285,871; and copper-lead ore, \$4,626. Placer mines produced only \$453 in gold in 1920. During the year more ore was treated by amalgamation and cyanidation, and gold from this source was valued at \$87,518. Concentrates of various kinds produced gold valued at \$964,078, of which the copper concentrates contained \$566,633 and the lead concentrates \$372,880. The value of the gold in crude ore shipped to smelters was \$943,182, of which \$498,876 in gold came from siliceous ore. The remainder had its source in ore leached or old tailings, and slag, shipped or treated. Shipments of copper ore from the Bingham district were curtailed in 1920, as in 1919, and the gold from these ores was correspondingly decreased. In 1920, 11 mines in Utah each produced gold valued at more than \$50,000. The largest producers of gold were the Utah Copper, United States Mining Co., Deer Trail, Utah Consolidated, Grand Central, and Chief Consolidated mines.

The silver output of Utah increased from 11,649,961 ounces in 1919 to 13,106,976 ounces in 1920, or 1,457,015 ounces. Juab County produced 4,650,273 ounces of silver; Utah County, 2,282,461 ounces; Summit County, 2,162,541 ounces; and Salt Lake County, 2,053,372

ounces. Separated as to source, the silver came principally from lead ore, which supplied 7,895,007 ounces. Siliceous ore supplied 3,955,771 ounces; copper ore, 452,915 ounces; lead-zinc ore, 630,875 ounces; and copper-lead ore, 172,401 ounces. Crude ore which was shipped to smelters contained 10,338,616 ounces; concentrates, 2,191,040 ounces; ore leached, 436,326 ounces; and gold and silver bullion, only 122,797 ounces. The Tintic district, in Juab and Utah Counties, produced 4,884,740 ounces, against 6,779,829 ounces in 1919. The Bingham district of Salt Lake County produced 1,589,972 ounces, and the Park City region, in Summit and Wasatch Counties, 2,672,389 ounces. Eight mines in Utah produced more than 400,000 ounces of silver each in 1920. These were the Chief Consolidated, Tintic Standard, Ontario, Silver King Coalition, Eagle and Blue Bell, Vipont, Daly West, and Judge mines.

There were 165 producing properties in 1920, of which 3 were placer mines. The ore output increased from 6,745,423 tons in 1919 to 6,800,180 tons in 1920. Most of this, or 5,895,665 tons, was concentrated, making 424,220 tons of concentrates; 611,346 tons of crude ore was shipped to smelters; and 23,696 tons was treated in gold and silver mills. Four smelting plants were active at Murray, Midvale, Garfield, and International, Utah.

WASHINGTON.

The production of gold, silver, copper, lead, and zinc in Washington in 1920, according to C. N. Gerry, of the United States Geological Survey, had a total value of \$1,200,932, a decrease of \$231,971 over the production of 1919. The production of gold and silver was less than that of 1919, but the production of copper and lead was more, and shipments of zinc ore were resumed. Most of the metal output resulted from the smelting of ore and concentrates at Tacoma and Northport, Wash., and Trail, British Columbia. No ore was shipped to the other Canadian smelting plants.

The gold output had a value of \$120,860, a decrease of \$132,002. The only important production of gold came from Ferry County, which included the Republic district. In 1920 the county produced \$110,278 in gold, a decrease of \$134,863. Most of the gold of the State, or \$114,725, came from siliceous ore, principally from the Republic district. Copper ore supplied only \$4,622 in gold, and placers, \$1,472. Lead ore was not an important source. Gold contained in crude ore shipped was valued at \$114,325; gold in bullion, \$441; and gold in concentrates, \$4,622. Since 1860 Washington has produced \$28,127,072 in gold. The Quilp mine at Republic was the largest gold producer in 1920, followed by the Surprise-Lone Pine-Pearl group. The Last Chance mine was idle on account of litigation and the expense of labor and freight.

The silver output in 1920 was 199,678 ounces, valued at \$217,649, a decrease of 59,706 ounces. Stevens County was the main silver producer, with 134,100 ounces, and Ferry County followed with 33,274 ounces. Of the total silver, 146,820 ounces had its source in copper ore, 45,977 ounces came from siliceous ores, 4,123 ounces from lead ores, and 2,742 ounces from copper-lead ore. Concentrates contained 99,411 ounces of silver; shipping ore, 100,248 ounces; and ores treated in gold and silver mills, only 3 ounces. The United Copper mine at Chewelah was the largest producer of silver in the State,

followed by the Quilp mine at Republic and the Sunset mine at Index.

There were 9 placers and 35 deep-producing mines. The latter, in addition to gold and silver, produced 1,983,134 pounds of copper, 5,787,247 pounds of lead, and 426,496 pounds of zinc. The quantity of ore sold or treated was 85,318 tons, a decrease of 15,561 tons. Of this quantity, 23,667 tons was shipped directly, 61,639 tons was concentrated, and 12 tons was treated in amalgamation or cyanidation mills.

WYOMING.

There was no production of the precious and associated metals in Wyoming in 1920. In Albany County development work was done at the Rambler property, near Holmes, at the Native Copper mine, at Tie Siding, and at the property of the Colowyo Gold Mining Co. at Centennial; in Fremont County the Carissa mine, at Atlantic City, was kept free from water by pumping; in Goshen County development work was done at the Copper Bottom mine in the Muskrat district; and in Lincoln County development work is reported to have opened up copper ore at the McKinney mine near Afton. For several years past a considerable quantity of high-grade copper ore, carrying some silver, has been shipped from the Sunrise iron mine at Hartville, but no copper ore was shipped from this mine in 1920.

REFINERY PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES IN 1920.

The Bureau of the Mint, with the cooperation of the Geological Survey, has issued the following statement of the final compilation of the production of gold and silver in the United States during the calendar year 1920:

State or Territory.	Gold.		Silver.	
	Ounces.	Value.	Ounces.	Value. ¹
Alaska.....	412,915	\$8,535,700	822,410	\$903,228
Alabama.....	10	200	5	5
Arizona.....	240,032	4,961,900	5,431,637	5,965,404
California.....	716,477	14,810,900	1,654,653	1,817,256
Colorado.....	363,218	7,508,400	5,166,873	5,674,622
Georgia.....	34	700	4	4
Idaho.....	22,668	468,600	7,364,785	8,088,523
Illinois.....			8,625	9,473
Massachusetts.....	10	200	1,160	1,274
Michigan.....			511,664	561,945
Missouri.....	14	300	123,094	135,190
Montana.....	91,802	1,897,700	13,263,356	14,566,746
Nevada.....	175,451	3,626,900	7,481,866	8,217,109
New Mexico.....	21,720	449,000	699,745	768,509
North Carolina.....	54	1,100	10	11
Oregon.....	49,714	1,027,700	101,658	111,648
Pennsylvania.....			90	99
South Carolina.....	14	300	1	1
South Dakota.....	209,842	4,337,800	87,623	96,234
Tennessee.....	285	5,900	107,250	117,790
Texas.....	5	100	522,818	574,195
Utah.....	102,975	2,128,700	11,755,411	12,910,615
Washington.....	7,160	148,000	177,758	195,226

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792.

The production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
1792 to July 31, 1834.....	677,250	\$14,000,000	Insignificant.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1920.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1920, with the class of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended Dec. 31, 1920.

Material used.	Gold issued (value).			Silver issued (weight).		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	Dollars.	Dollars.	Dollars.	Fine ounces.	Fine ounces.	Fine ounces.
Bullion, old plate, etc.....	71,414,415	7,300,672	78,715,087	1,790,949	26,106,228	27,897,177
United States coin.....		1,095,151	1,095,151		10,903	10,903
Total.....	71,414,415	8,395,823	79,810,238	1,790,949	26,117,131	27,908,080

Estimating that the total amount of gold coin used in the arts during the calendar year 1920 has been \$3,500,000, and silver coin \$100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was \$82,215,087, and of silver 27,974,521 fine ounces.

In order to arrive at the net consumption in the arts there should be deducted from the foregoing totals the amount of old jewelry, plate, etc, included in the private refinery returns and also the same class of material returned to monetary use. In the year 1920 these amounts aggregated \$28,205,478 in gold and 8,694,392 fine ounces in silver, which leaves as the net amount of new material devoted to industrial use, \$54,009,609 gold and 19,280,129 fine ounces silver.

Gold furnished for use in manufactures and the arts and classification of the materials used, by calendar years, since 1880.

Calendar years.	New material.			Old material.	Grand total.

LOSSES AND GAINS ON WITHDRAWN COIN.

The loss on face value of gold coin totaling \$1,913,550.50 withdrawn from circulation during the fiscal year 1921 was \$25,621.35, of which \$874.81 was reimbursable from the appropriation provided for that purpose. The loss on face value of subsidiary silver coin totaling \$634,133.03 withdrawn from circulation was \$46,850.92, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling \$112,386.52 withdrawn during the fiscal year was \$4,535.03.

The gain on recoinage of 111,168 standard silver dollars into subsidiary coin will amount to \$2,683.38.

Standard silver dollars (mutilated), purchased as bullion for use in the manufacture of subsidiary silver coin (since 1883).

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (3£ 17s. 10d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

NOTE.—Later figures are not available.

THE COURSE OF SILVER AND GOLD.

The following review of the London market during the calendar year 1920 is from the annual circular issued by Messrs. Sharp & Wilkins, bullion brokers, of London, England:

The course of the silver market during the year just concluded has presented many very interesting phases, and it is memorable in that the price at one period attained such a figure as has never been recorded before, for on February 12 the business of the day was done at 89½d. per ounce standard, having risen from 75½d., the price on the first working day of the year.

It will be safe to say that the rates from time to time have had greater daily fluctuations than in any previous year, movements of 2d. and over have been numerous, 4d., 5d., and 6d. not uncommon, and between March 4 and 5 a change of 6½d. per ounce was registered, and such differences have as often been in one direction as the other. The market has therefore been an unusually difficult and dangerous one.

Subject to such occasional variations, the price on the whole rose gradually from 75½d. for cash and 74d. for two months at the opening of the year, to the highest, 89½d. in the middle of February, then fell as low as 84d. on March 1, after which it pursued a weakening direction to 66d. on March 17. A sharp recovery took place to 77d., but five days later silver was 71d. again on March 29; from thence onward it fell to 60d. early in May and declined gradually to 45½d. a month later. After a temporary rise of about 5d., the low point of 44d. was reached on June 15. In July and August higher rates were quoted and 63½d. was recorded on August 20; then a more even rate supervened at a fraction under 60d. to the end of September. During October the price declined a little, but had an average for the month of 54½d. Toward the middle of November a very sharp fall in price was produced by the specially large sales from the Continent and later some resales from China, and rates gave way almost daily, until the lowest point in the year, 38½d. per ounce standard, was touched on December 10. Altogether the silver from continental sources has probably exceeded £8,000,000.

The variations can be followed more easily from the statement given below of the prices of cash silver:

	Pence.		Pence.
January 2.....	75½	June 11.....	51½
February 11.....	89½	June 15.....	44
March 1.....	84	August 20.....	63½
March 17.....	65½	October 1.....	59
March 22.....	77	October 19.....	50½
March 26.....	71	November 6.....	54½
May 7.....	60	December 10.....	38½
June 9.....	45½	December 29.....	43

Highest spot silver, 89½d.; lowest spot, 38½d.; average for the year, spot, 61½d. Highest two months, silver, 87½d.; lowest two months, 39d.; average for the year, two months, 60½d.

At the time of the greatest appreciation in January and February the rise was due to the large and continuous inquiry on account of China, both here and in the United States, and the eastern exchanges rose high on an official announcement that the rupee would be dependent on the price of gold, and as gold at that time was as high as 127s. 4d., owing to the low rate of exchange with America, the extreme figures for silver early in February were attained. The linking of the rupee with the price of gold was afterwards abandoned.

The intrinsic value of English silver coin being by then far above the currency rate, it was decided that the quality of the coins should be reduced from 925 per 1,000 to 500 per 1,000 to lessen the temptation to melt the currency, as although this was forbidden by law it was feared that it might take place to some extent. The new coins, however, were not issued until the middle of December. The quality of 925 per 1,000 for English silver has been in force since the time of Queen Elizabeth, and indeed was prescribed as early as 1357, since which date, except for some small variation by King Henry VIII, King Edward VI, and Queen Mary, the standard has been maintained until the present year.

About the time this alteration was decided upon, large sales of silver began to be made on continental account, and the extra supply thus obtained had a great influence in reducing the price and explained the fall which took place at that time. The demand, however, was still great, and the fall was on the whole only a gradual one. A cessation of buying for China during their New Year holidays, for about a fortnight, made the demand less keen for a time, but on the resumption of trade there,

further buying on Chinese account took place, and has continued off and on through the greater part of the year.

Up to February 12 no silver was allowed to be imported into India except on Government account, but at that date permission was given to ship the metal to India under license, which was readily granted, and the import duty which had been in existence for a long time, of 4d. per ounce, was abolished altogether, a new regulation which again brought India into the market as a buyer for shipment, and induced business of the same character as had been done in prewar times to such a large extent. The silver shipped to India since has amounted to £3,600,000.

In May, when the price of silver had fallen to the neighborhood of \$1 per ounce fine, the rate fixed by the Pittman Act in America for repurchases of the metal to replace the dollars which had been sold for the needs of India and elsewhere, doubt was expressed as to whether the provisions of the act would actually come into force, some thinking such action would be delayed, or that the American Government would be able to buy at a lower rate, and for a while this uncertainty had a prejudicial effect upon the market. It was felt by most, however, that the United States would not evade the moral obligation of the Pittman Act to buy at a dollar per ounce, and after necessary safeguards had been taken that only domestic production in America should benefit by this rule, the expected purchases began to take place, and have continued throughout the year to the extent of about 31,000,000 ounces.

Another influence was the decision of the Indian Government at the end of September to discontinue the offers of reserve council drafts in India. It was felt that the rupee exchange would probably fall considerably; and although at the time no great importance was attached to it, that effect was produced and silver prices gave way, and some sales of rupees, the actual coins, were made at this time by Indian dealers.

Much of the continental silver which has been brought to this market has consisted of Turkish coin melted abroad, and in the first half of the year the amount was considerable; this Turkish supply has latterly been so much reduced as to be almost negligible, but silver which was believed to consist of melted German marks has been sold largely in this market, although export from Germany is forbidden.

To give any indication of the future prospects of silver is a harder matter than usual; the question seems to depend upon how much may be put on the market from continental sources, as with European exchanges at such figures as are quoted to-day it is manifest that actual coin when melted provides a better means of obtaining funds here than anything else, and, prohibition of export from many countries notwithstanding, it is probable that considerable amounts may be forthcoming. It has been mentioned in the public press that some of the German princes have succeeded in getting out of the country treasure in large quantities, some of which no doubt consisted of silver coin.

On the other hand, the purchases of the American domestic supply, under the provision of the Pittman Act, will continue to absorb, for the coming year, most of the silver which in former years was disposed of in this market from that source.

Outside the famine area in China the crops have been good, and indicate a fair trade with that country with a normal supply of production, and although the last monsoon in India was not a good one, yet the rain was fairly distributed, and India is not unprosperous, foreshadowing fair exports, including wheat, which had hitherto been kept in the country.

These influences, however, can not come into operation for some little time, as owing to the quantity of goods already in this country unabsorbed, there is but little export business being done in India and China, and the eastern exchanges have given way very much in consequence.

Although the prospect in the near future is gloomy, owing to the silver from coin which comes here in quantity from the Continent, we think prices later on may recover to some extent, as the world's production has not increased and there are still many uses for it.

Gold.—There has been a large business done during the year in gold bullion, but it has been restricted to the production of South and West Africa, under the agreement made with the Government and the Bank of England to receive all the supplies from there and to sell them under the control of the latter. The basis of price has naturally been the state of the exchange between London and New York, as gold could always be sold profitably for shipment to America. Large amounts were wanted, however, for other countries, and sums were bought by the Government of India, and sold in India periodically, upon tenders for the metal made to them there. South America also was able to use a considerable quantity, as well as South Africa, the exchange there making it necessary to send remittances of sovereigns back to the country of the origin of the gold bullion. Gold was also sent to the Straits Settlements, and as soon as private business was allowed in the metal in India, large remittances were sent thither also, notwithstanding the high prices that were current for gold at the time. The balance has been bought for America and there have been great fluctuations in price; the lowest was 102s. 7d. per ounce fine on April 11 and the highest 127s. 4d. on February 5. Average for the year, 112s. 11d. per ounce fine.

NOTE.—The normal London gold price is 77s. 9d. per standard ounce (11/12 fine), or 84s. 11½d. per fine ounce.

Much exception has been taken to the refusal to grant shipping licenses for gold bullion which has been bona fide imported into this country from some of our dependencies, and the considerable quantity which is obtained from refinable silver and ores, the result being that the owners had to accept much below the rates current at the time. In spite of what was felt to be an injustice, the authorities were obdurate in refusing to allow this gold to be exported, and only at the end of the year have consented to afford tardy relief in certain cases.

Exports of gold have been made as below, but the customs list of imports would be somewhat misleading, as some items have not been included.

VALUES OF FOREIGN COINS.

The following values, calculated by the Director of the Mint, were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1921:

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks.
Argentine Republic.....	Gold.....	Peso.....	\$0.9648	Currency: Paper, normally convertible at 44 per cent of face value; now inconvertible.
Austria-Hungary.....	do.....	Krone.....	.2026	
Belgium.....	Gold and silver.	Franc.....	.1930	Member Latin Union; gold is actual standard.
Bolivia.....	Gold.....	Boliviano.....	.3893	12½ bolivianos equal 1 pound sterling.
Brazil.....	do.....	Milreis.....	.5462	Currency: Government paper normally convertible at 16 pence (= \$0.3244) per milreis.
British Colonies in Australasia and Africa.	do.....	Pound sterling.....	4.8665	
Canada.....	do.....	Dollar.....	1.0000	
Central American States:				
Costa Rica.....	do.....	Colon.....	.4653	
British Honduras.....	do.....	Dollar.....	1.0000	
Nicaragua.....	do.....	Cordoba.....	1.0000	
Guatemala.....	Silver.....	Peso.....	.4538	{ Guatemala: Currency, inconvertible paper. Honduras: Currency, bank notes.
Honduras.....				
Salvador.....	Gold.....	Colon.....	.5000	
Chile.....	do.....	Peso.....	.3650	Currency: Inconvertible paper.
		Amoy.....	.7439	
		Canton.....	.7417	
		Chefoo.....	.7116	
		Chin Kiang.....	.7268	
		Fuchau.....	.6882	
		Haikwan (customs).....	.7570	
		Hankow.....	.6961	
		Kiaochow.....	.7209	
		Nankin.....	.7362	
		Niuchwang.....	.6977	
		Ningpo.....	.7153	
		Peking.....	.7253	
		Shanghai.....	.6708	
		Swatow.....	.6872	
		Takau.....	.7486	
		Tientsin.....	.7209	
		Yuan.....	.4875	
		Hongkong.....	.4893	
		British.....	.4893	
		Mexican.....	.4929	
China.....	Silver.....	Tael.....		The tael is a unit of weight; not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael.
		Dollar.....		The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to 0.644 + of the Haikwan tael.
Colombia.....	Gold.....	Peso.....	.9733	Mexican silver pesos issued under Mexican decree of Nov. 13, 1918, are of silver content approximately 41 per cent less than the dollar here quoted.
Cuba.....	do.....	do.....	1.0000	Currency: Government paper and gold.
Denmark.....	do.....	Krone.....	.2680	
Ecuador.....	do.....	Sucre.....	.4867	
Egypt.....	do.....	Pound (100 piasters).....	4.9431	The actual standard is the British pound sterling, which is legal tender for 97½ piasters.
Finland.....	do.....	Markka.....	.1930	
France.....	Gold and silver.	Franc.....	.1930	Member Latin Union; gold is actual standard.
Germany.....	Gold.....	Mark.....	.2382	
Great Britain.....	do.....	Pound sterling.....	4.8665	
Greece.....	Gold and silver.	Drachma.....	.1930	Do.
Haiti.....	Gold.....	Gourde.....	.2500	Currency: Inconvertible paper.
India (British).....	do.....	Rupee.....	.4866	(10 rupees equal 1 pound sterling.)
Indo-China.....	Silver.....	Piaster.....	.4901	

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks.
Italy.....	Gold.....	Lira.....	\$0.1930	Member Latin Union; gold is actual standard.
Japan.....	do.....	Yen.....	.4985	
Liberia.....	do.....	Dollar.....	1.0000	
Mexico.....	do.....	Peso.....	.4985	Currency: Depreciated silver token coins. Customs duties are collected in gold.
Netherlands.....	do.....	Guilder (Florin).....	.4020	
Newfoundland.....	do.....	Dollar.....	1.0000	
Norway.....	do.....	Krone.....	.2680	
Panama.....	do.....	Balboa.....	1.0000	
Paraguay.....	do.....	Peso (Argentine).....	.9648	
Persia.....	Silver.....	Kran.....	.0836	
Peru.....	Gold.....	Libra.....	4.8665	Currency: Silver circulating above its metallic value. Gold coin is a commodity only, normally worth double the silver.
Philippine Islands.....	do.....	Peso.....	.5000	
Portugal.....	do.....	Escudo.....	1.0805	Currency: Inconvertible paper.
Rumania.....	do.....	Leu.....	.1930	
Russia.....	do.....	Ruble.....	.5146	Valuation is for gold pesets; currency is notes of the bank of Spain.
Santo Domingo.....	do.....	Dollar.....	1.0000	
Serbia.....	do.....	Dinar.....	.1930	
Siam.....	do.....	Tical.....	.3709	
Spain.....	Gold and silver.	Peseta.....	.1930	
Straits Settlements.....	Gold.....	Dollar.....	.5678	
Sweden.....	do.....	Krona.....	.2680	
Switzerland.....	do.....	Franc.....	.1930	Member Latin Union; gold is actual standard.
Turkey.....	do.....	Piaster.....	.0440	
Uruguay.....	do.....	Peso.....	1.0342	
Venezuela.....	do.....	Bolivar.....	.1930	(100 piasters equal to the Turkish £.)

Changes in the values of foreign coins during 1921.

MONETARY LEGISLATION.

[PUBLIC—No. 381—66TH CONGRESS.]

[S. 4893.]

AN ACT To authorize the coinage of a 50-cent piece in commemoration of the one hundredth anniversary of the admission of Missouri into the Union.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in commemoration of the one hundredth anniversary of the admission of Missouri into the Union there shall be coined at the mints of the United States 50-cent pieces to the number of two hundred and fifty thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting for security of the coin, or for any other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, March 4, 1921.

[PUBLIC—No. 10—67TH CONGRESS.]

[H. R. 2435.]

AN ACT Imposing temporary duties upon certain agricultural products to meet present emergencies, and to provide revenue; to regulate commerce with foreign countries; to prevent dumping of foreign merchandise on the markets of the United States; to regulate the value of foreign money; and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

* * * * *

TITLE IV.—GENERAL PROVISIONS.

* * * * *

CONVERSION OF CURRENCY.

SEC. 403. (a) That section 25 of the Act of August 27, 1894, entitled "An Act to reduce taxation, to provide revenue for the Government, and for other purposes," is amended to read as follows:

"SEC. 25. That the value of foreign coin as expressed in the money of account of the United States shall be that of the pure metal of such coin of standard value; and the values of the standard coins in circulation of the various nations of the world shall be estimated quarterly by the Director of the Mint and be proclaimed by the Secretary of the Treasury quarterly on the first day of January, April, July, and October in each year."

(b) For the purpose of the assessment and collection of duties upon merchandise imported into the United States on or after the day of the enactment of this Act, wherever it is necessary to convert foreign currency into currency of the United States, such conversion, except as provided in subdivision (c), shall be made at the values proclaimed by the Secretary under the provisions of section 25 of such Act of August 27, 1894, for the quarter in which the merchandise was exported.

(c) If no such value has been proclaimed, or if the value so proclaimed varies by 5 per centum or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate. For the purposes of this subdivision such buying rate shall be the buying rate for cable transfers payable in the foreign currency so to be converted; and shall be determined by the Federal Reserve Bank of New York and certified daily to the Secretary, who shall make it public at such times and to such extent as he deems necessary. In ascertaining such buying rate such Federal Reserve Bank may in its discretion (1) take into consideration the last ascertainable transactions and quotations, whether direct or through the exchange of other currencies, and (2) if there is no market buying rate for such cable transfers, calculate such rate from actual transactions and quotations in demand or time bills of exchange.

(d) Sections 2903 and 3565 of the Revised Statutes are repealed.

(e) Section 25 of such Act of August 27, 1894, as in force prior to the enactment of this Act, and section 2903 of the Revised Statutes, shall remain in force for the assessment and collection of duties on merchandise imported into the United States prior to the day of the enactment of this Act.

* * * * *

Approved, May 27, 1921.

FOREIGN AND WORLD MONETARY STATISTICS.

The statistics of foreign countries on production, import, and export of gold and silver, coinage and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data, other than from the interrogatory replies, are published, the source of the information is stated.

Revised tables for 1919 and incomplete tables for 1920 are printed, the tables following the other foreign data herewith.

NORTH AMERICA.

CANADA.

Coinage executed for domestic use during the year ended Dec. 31, 1919.

¹ Includes silver, there being no means of ascertaining amounts of each held.

² It is impossible to estimate the amount of gold in circulation in Canada, owing to the fact that no means exists of ascertaining the amount of British and American gold in circulation.

³ Of this amount \$41,605,000 is held as reserve stock.

Specie payments are suspended. The actual currency is Dominion notes and bank notes—silver.

Premium on gold: Highest, 18 per cent; average, 12 per cent.

The quantity of new bullion used in the industrial arts during the year ended December 31, 1920, was as follows: Gold, 150 fine kilos (4,823 ounces) valued at 199,999 pesos (\$99,700); silver, 1,500 fine kilos (48,225 ounces) valued at 97,470 pesos (\$48,589).

The import of United States gold coin and bullion during the calendar year 1920 was as follows: Coin, 7,545 fine kilos (242,572 ounces) valued at 10,059,698 pesos (\$5,014,759); bullion, 45.7 fine kilos (1,469 fine ounces) valued at 60,911 pesos (\$30,364).

The production of gold and silver during the year ended December 31, 1920, was as follows: Gold, 22,970 fine kilos (738,472 ounces) valued at \$15,267,081; silver, 2,073,476 fine kilos (66,662,253 ounces) valued at \$67,955,501.

The export of gold and silver during 1920 was as follows: Gold, 7,255 fine kilos (233,248 ounces) valued at \$4,821,656; silver, 1,801,173 fine kilos (57,907,712 ounces) valued at 120,799,402 pesos (\$60,218,502).

LAWS AFFECTING THE CURRENCY.

By the decree of January 7, 1920, a bronze coin of 20 centavos was established.

GOLD AND SILVER COIN IN CIRCULATION ON DECEMBER 28, 1920

[From bullion letter of Samuel Montagu & Co., Jan. 27, 1921.]

A copyright cablegram to the New York Times from Mexico City, under date of December 28, said: "The Mexican Government is coining gold, while the coinage of silver has been reduced to a minimum. At the present time the Government has 251,000,000 pesos in gold in circulation and 50,000,000 in silver. Although the ratio is 5 to 1, the Government has practically stopped coining silver and the mint is busy on gold coins, copper pieces, and small change. * * * The Government is buying all the silver offered, but Señor de la Huerta stated that few offers had been made. The mining companies prefer to hold their silver, expecting a rise in value."

FINANCIAL SITUATION—1920.

[From *Moniteur des Intérêts Matériels*, Brussels, Apr. 17, 1921.]

When the administration of President Huerta abdicated in favor of General Obregon's administration on November 30, 1920, the general treasury consisted of 5,158,791 pesos and 2,189,372 pesos from other sources, leaving thus a sum of 7,348,119 pesos at the disposal of the new government.

AMERICAN CURRENCY IN CIRCULATION IN NORTHERN MEXICO.

[Commercial Attaché Feely, in Commerce Reports, Feb. 6, 1920.]

The circulation of American currency in the north of Mexico and along the coast is considered detrimental to the interests of the country by high Government officials since, as a result, Mexican fractional currency is slowly disappearing. In many parts of the country, especially near Tampico, American bills and silver money circulate freely, and even the Government is obliged to accept it in payment of taxes, stamps, etc.

NEW BRONZE COIN.

[From Bulletin of the Pan American Union, March, 1920.]

By a presidential decree of the 7th of last January a new bronze coin was established which has a nominal value of 20 centavos. This coin shall be accepted by the State in payment of taxes, duties, services, etc., in unlimited quantities at par with gold, and its coinage shall be governed by the law of March 25, 1905.

ISSUE OF PAPER CURRENCY.

[From Bulletin of the Pan American Union, March, 1920.]

By a presidential decree of the 10th of January last, the monetary commission is authorized to issue paper notes with a nominal value of 50 cents (centavos) and one peso, national gold. These notes will only be considered as fractional currency, based on national gold money deposited with the monetary commission, and they shall, therefore, only be issued after the delivery to the commission of an amount of gold equal to the amount applied for in notes. Said commission shall not be entitled to issue for the time being more than 15,000,000 pesos in notes of 50 cents (centavos), nor more than 10,000,000 pesos in notes of \$1 (peso).

MONETARY CIRCULATION IN MEXICO CITY.

[From El Economista, Madrid, Apr. 10, 1920.]

The monetary circulation in Mexico City consists exclusively of gold and silver, paper currency of any kind being absolutely unknown.

NATIONAL BANK OF MEXICO.

[From the Commercial and Financial Chronicle, New York, July 10, 1920.]

The daily papers on the 8th instant printed the following from Mexico City July 7: "Decision has been reached to reestablish the former National Bank of Mexico as the sole bank empowered to issue notes, according to an announcement made by provisional President de la Huerta to foreign correspondents here. The capital of the bank will be fixed at 50,000,000 pesos, but the Universal declares it will be authorized to issue notes amounting to 150,000,000 pesos. A representative of the Government is expected to leave for the United States soon for the purpose of conducting negotiations looking to the financing of the project.

"Banks which have in the past been authorized to issue notes will be required to redeem their paper within eight years, and may receive aid from bond issues."

FRONTERA—EXCHANGE RATES—UNITED STATES MONEY IN CIRCULATION.

[Consul Lee R. Blohm, Mar. 12, in Supplement to Commerce Reports, June 21, 1920.]

Exchange on the United States fluctuated between 51 and 54 cents American for the Mexican peso. United States paper money and silver were discounted slightly for the first of the year 1919, but later were accepted at 2 for 1. During the

first three months of 1920 a considerable quantity of American money, metallic and paper, has entered local circulation. This was due largely to the secret exportation of Mexican silver to be sold as bullion. The shortage of silver coins has seriously hampered the retail trade, a condition rendered still worse by persons who corner the silver supply and sell 9 pesos in silver for 10 pesos gold. The actual outcome will be the introduction of American money to relieve the situation.

MEXICALI—MEDIUM OF EXCHANGE.

[Consul Walter F. Boyle, Apr. 9, in Supplement to Commerce Reports, June 21, 1920.]

The only money in circulation is that of the United States. The Mexican custom-house places a tax, variable in its terms but averaging for the last year 7 per cent, on the payment of customs duties in foreign money other than gold coin. The local government accepts American money at par value, 2 Mexican pesos for each dollar United States currency, and in business prices in Mexican currency are hardly ever quoted.

PROGRESO—DEPRECIATION OF PAPER MONEY.

[Consul O. Gaylord Marsh, Feb. 16, in Supplement to Commerce Reports, June 21, 1920.]

At the beginning of the year the paper money of the Comision Reguladora was the only medium of exchange in general circulation. Coin and American paper served only for payments to Federal offices, for meeting special contracted obligations, and for purposes of exchange speculation.

Up to the middle of the year the Reguladora continued its practical monopolization of the issuance of drafts on the United States. Though the paper money suffered a constant depreciation to about 4 pesos to the American dollar in July, the nominal rate being 2 to 1, the Reguladora was issuing a few drafts and promising all drafts at a rate of 2 to 1. This gave rise to active speculation and greatly prejudiced business.

BRITISH HONDURAS.

The total import of United States gold coin during the year ended December 31, 1920, was \$7,500.

The Colony of Trinidad and Tobago has a monetary system based on English silver, 4 shillings and 2 pence being equal to \$1. The dollar currency is entirely paper, and fluctuates in value as compared with the American dollar, according to the rates for English sterling at New York. At present (Aug. 24, 1921) the American dollar is about 31 per cent premium. The banking rate of exchange is usually 2 or 3 cents higher on the dollar than American paper dollar bills which may be sold here. American gold is usually worth considerably less than American paper money, owing to the trouble and expense of shipping the same to the United States. American silver money is taken only at a parity with local silver, notwithstanding the banking rate is 30 per cent higher.

EFFECT OF EXCHANGE SITUATION ON TRADE WITH UNITED STATES.

[Consul Henry D. Baker, Port of Spain, Sept. 30, 1920, in Supplement to Commerce Reports, Nov. 27.]

The rate of exchange between Trinidad and American money is but slightly, if at all, affected by the trade balance between the two countries, the relative values of the two kinds of money being based mainly upon the cable quotations of rates on the British pound sterling in New York. By local law £1 has a fixed value of \$4.80 in Trinidad money, and 4 shillings 2 pence is equal to \$1 Trinidad money. Thus the rise and fall of quotations on the pound sterling, as quoted in American money,

affect the relative value of Trinidad and American money. In normal times the Trinidad and American dollar were practically at par in this colony, and in small retail transactions it was immaterial whether Trinidad or American dollars were paid. About in August, 1919, a premium on American dollars became noticeable locally; this tended steadily to increase and by the end of the year amounted to about 25 per cent and subsequently rose to over 40 per cent, fluctuating more or less every day.

This premium on American money proved extremely embarrassing to importers of American goods, and resulted near the close of 1919 in considerable cancellation and curtailment of orders for goods purchased in the United States. It tended also to force merchants to meet only the urgent necessities of their trade in placing orders, to carry low stocks, and, in so far as possible, to divert their orders to England, where the exchange difficulty would not have to be encountered. The effect of this abnormal exchange, occurring toward the end of 1919, is not noticeable in the import statistics for that year, which appeared favorable for American trade, but probably they would have shown a larger increase but for this factor.

COSTA RICA.

EXCHANGE—BANKING.

[Consul Benjamin F. Chase, San Jose, in Supplement to Commerce Reports, Nov. 29, 1920.]

The average rate of exchange in 1919 was 3.9 colones per dollar, as against 4.5 for 1918. The rate for the last quarter of 1919 was 2.9. Small coffee growers sell their crops to the larger growers, who have *beneficios* (coffee-cleaning plants), at a colon rate. These larger growers, who are also exporters, receive American currency or drafts for their crops. During the season the tendency of the banks is to hold the exchange down and of the coffee men to drive it higher, so that their colon accounts can be settled with fewer dollars. The rise or fall of exchange does not seem to materially affect foreign buying.

The only change in banking was the purchase of the control of the Banco Mercantil de Costa Rica by the Mercantile Bank of the Americas. The bank is having a rapidly increasing business under the new management. The directorate of the Banco Internacional de Costa Rica (Government-owned bank) was entirely changed by the provisional government in September, 1919. Litigation between the Royal Bank of Canada and the Government over some of its financial deals with the Tinoco régime is now pending. All of the banks and banking houses of Costa Rica seem anxious to serve America's trade.

CUBA.

The total import of United States gold coin during the year ended December 31, 1920, was \$2,075,000.

Estimated stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1920.

No premium on gold.

Export of gold and silver to the United States of America during the year ended December 31, 1920: Gold, 498 ounces; silver, 64,950 ounces.

SILVER AND NICKEL COINAGE AUTHORIZED.

[From Bulletin of the Pan American Union, May, 1920.]

On February 17 the President issued a decree authorizing the minting of silver and nickel coins to the amount of 1,550,000 pesos, to be proportioned as follows: Silver coins, 50,000 pesos in 40 centavo pieces; 700,000 pesos in 20 centavo pieces; 300,000 pesos in 10 centavo pieces. Nickel coins, 300,000 pesos in 5 centavo pieces, and 200,000 pesos in 1 centavo pieces. The coining will be done by the Philadelphia mint by arrangement with the United States Government.

MONETARY SYSTEM.

[From Federal Reserve Bulletin, November, 1920.]

Before the American occupation, the monetary circulation of Cuba was composed largely of Spanish gold and of various silver coins; there was no paper money. As Cuba's industries developed, the need for a more modern currency became urgent, and on October 29, 1914, a monetary law was enacted by which the Cuban gold peso, equal to the American dollar in weight and fineness, was made the standard, and all owners of the then existing currencies were required to turn them in at the National Bank of Cuba to be shipped abroad. The total amount so shipped during the years 1914 to 1917 was about 64 million dollars. The portion shipped to America was melted and recoinced into the new Cuban currency at the United States mint and about 31.2 millions of the new money was sent to Cuba. The composition of the currency so shipped was as follows: Gold coins, 23.8 millions; silver coins, 6.7 millions; nickel coins, 0.7 million. Recently Cuba has ordered another 2½ millions in silver and nickel coins. In addition to this circulation of hard money Cuba uses American paper currency, largely Federal Reserve notes, which are supplied to it by American banks. It was estimated that at the end of last year there were about 60 millions of American paper money in Cuba; during the current year up to the middle of June about 43 millions more were shipped, and shipments of about 50 millions were made during the most recent weeks. There is no record of the amount of this currency returned to the United States, but it may be estimated that the total amount in circulation in Cuba is approximately 150 million dollars. The gold, of which there is about 24 millions, is held largely by the treasury and in the banks, while the active circulation consists of paper money and silver and nickel coins.

DOMINICAN REPUBLIC.

The amount of silver coin withdrawn from monetary use for industrial purposes during the year ended December 31, 1920, was \$150,000.

The Dominican Republic is now using United States currency.

The quantity of gold, silver, and platinum used in the industrial arts during the year ended December 31, 1920, was as follows: New bullion (gold, silver, and platinum) \$44,991; old jewelry, plate, etc. (gold and silver), \$25,321.

Approximate stock of gold and silver, also paper money, used for monetary purposes on December 31, 1920.

Total gold and silver.....	\$3,000,000
Total notes.....	7,000,000

The export of silver coin to the United States during the year ended December 31, 1920, amounted to \$150,000.

FRENCH WEST INDIES—GUADELOUPE.

¹ Estimated.

The actual money in use consists of paper and nickel tokens.

FRENCH WEST INDIES—MARTINIQUE ISLAND.

Gold has not been used for monetary purposes since 1914. Small sums of silver have been used for change. The total notes of banks of issue used for monetary purposes on December 31, 1920, was 20,068,695 francs (\$3,873,258).

There is no premium on gold.

GUATEMALA.**PAPER CURRENCY.**

[From a statement on the financial situation in Guatemala as presented by the Guatemalan delegation to the International Financial Conference at Brussels, 1920. In Commerce Reports, Nov. 2, 1920.]

Like all Spanish-American States where the peso is the national unit of currency our country has witnessed the disappearance of gold and silver coin and has been reduced for the last 30 years to artificial paper currency, and is suffering from the recognized results of such issues without any real backing.

This paper circulation is now calculated at 150,000,000 to 200,000,000 pesos.

The exchange at the beginning of the war was 20 pesos=\$1, and it rose in 1915-16 to 50 pesos=\$1, and at present it is about 30 pesos=\$1.

NOTE.—The Guatemalan silver peso was worth, at the average 1920 value of silver, \$0.4488.

HAITI.

Approximate stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1920.

Character of stock.	In Government treasury.
Gold coin.....	800,000 U. S. dollars.

Total gold and silver.....	900,000 U. S. dollars.
Government notes.....	1,800,000 gourdes.
Notes of banks of issue.....	8,000,000 gourdes.
Total notes.....	9,800,000 gourdes.
United States equivalent.....	\$1,960,000.

No premium on gold.

RETIREMENT OF BANK NOTES (BILLETS DE CAISSE).

[From Bulletin of Pan American Union, July, 1921.]

The official paper gives the following statistics: Notes to be retired according to the convention of April 12, 1919, sanctioned by the law of May 2, 1919, 8,877,972 gourdes; retired to April 27, 1921, 7,614,000 gourdes.

HONDURAS.

The production of gold and silver from deep mines during the year ended December 31, 1920, was as follows: Gold, 9,300 fine ounces, valued at \$192,248; silver, 2,000,000 fine ounces, valued at \$2,038,800.

The importation of American gold coin and bullion during the year 1920 can not be stated exactly, since no statistics of such importation exist. It is known that small amounts of gold coin were imported from the United States and also a certain quantity from Salvador during the latter part of the year. The importation from Salvador was due to the fact that the rate of exchange in Honduras on the United States varied only between par and 2 per cent premium, while the rate of exchange in Salvador on the United States during the latter part of 1920 showed a premium as high at times as 10 per cent to 15 per cent. Accordingly, a certain amount of American gold was sent to Honduras from Salvador to purchase drafts on the United States to be sold in Salvador at a profit. The banks undertook to prevent this class of transactions, and for the purpose of checking such operations the branch of the Banco Atlántida at Tegucigalpa practically declined to sell drafts for gold coin. However, certain interests on the north coast are understood to have sold a certain quantity of drafts for gold coin.

Approximate stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1920.

Character of stock.	In banks.	Held abroad by banks.	In circulation.	Total used for monetary purposes.

¹ Conversion rate, 1 Honduran peso=\$0.4488 at the 1920 average price of silver, \$1.0194 per ounce.

The figures given are only approximate estimates (except for the stocks held in the banks), since no exact figures of circulation exist. The silver coin of Latin American countries mentioned in the table includes principally the moneys of Salvador, Guatemala, Nicaragua, Chile, and Peru, together with a small quantity of Honduran coin; these moneys in large part no longer circulate in the countries which issued them. They were practically withdrawn from circulation in Honduras during recent years while the price of silver was above 70 cents per ounce, but about December 1, 1920, began to reappear in large quantities in circulation. The quantity of these moneys in circulation on December 31, 1920, has been estimated at widely divergent figures, but it is believed that the figures given in the table, 1,000,000 to 1,500,000 pesos (\$448,800 to \$673,200), is a fair approximation.

Coined gold does not circulate in the country. The American silver and paper money representative of gold command no premium over the local silver in the southern part of the country and in the interior, but on the north coast and the frontier of Guatemala the local silver money is either refused or accepted at a discount, according to the price of silver. The banks are unwilling to sell drafts on the United States for local silver coin at par, and on the north coast prices expressed in terms of silver are higher than in terms of American money.

The only law passed during 1920 affecting the monetary situation was a law imposing a tax of 10 per cent on the value of silver which in any form whatever is exported from the Republic (Mar. 24, 1920).

Since the consumption of gold and silver in the country is practically negligible, the figures of production represent approximately the total exportation of these metals. These exports went entirely to the United States. A considerable amount of the formerly current silver coins was exported during the year when the price of silver was high.

The business of the Banco Atlantida is conducted entirely in terms of American money, and it is reported that the other bank, the Banco de Honduras, is about to adopt the American currency basis. The reserves of the Banco Atlantida consist almost entirely of American paper and silver money, while those of the Banco de Honduras consist partly of American money and partly of local silver.

It is likely that in the course of 1921 the Government will withdraw from circulation a considerable part of the foreign silver currency, excepting that of the United States. This would practically extend the American monetary system to Honduras, since the Honduran money has practically disappeared from circulation with the exception of the copper coins. In the country as a whole, American money already constitutes a larger part of the circulating medium than the old silver coins.

BANKING—CURRENCY—FINANCIAL REFORMS.

[Consul G. K. Donald, Tegucigalpa, Jan. 15, 1921, in Commerce Reports, Mar. 2, 1921.]

There are four banking institutions in Honduras, the Banco Atlantida, Banco de Honduras, Banco de Comercio, and the San Pedro Sula branch of the American Foreign Banking Corporation. The Banco de Comercio is in liquidation and the American Foreign Banking Corporation will close its branch early in 1921. It was established in

November, 1919. The first two mentioned are banks of emission, and in July, 1920, had bills in circulation amounting to approximately \$110,000, as compared with \$190,000 in 1919, and \$250,000 to \$350,000 before the rise in price of silver. As a consequence of the enhanced value of this metal, all the silver coins disappeared from circulation, most of them being exported to the United States, considerably embarrassing business transactions. In 1919 the exchange value of pesos and dollars was established at 2 for 1 and American coins and bank bills were declared legal tender at that rate. To take the place of the silver coins exported and of the local bank bills, which were rapidly being retired from circulation, American bank notes and coins have been imported to the value probably of \$3,000,000 and \$500,000 respectively. At present American money is practically the only medium of exchange.

It is proposed to establish a national bank with an authorized capital of \$5,000,000, to be formed if possible by a fusion of the two existing banks. The new bank will be the depository of all Government revenues; make payments of all public moneys according to the budget voted by Congress; have a monopoly of note issue in the Republic; act as the Government's agent in establishing and maintaining a stable monetary system based upon a fixed par with the gold money of the United States; and be the distributor of all revenue stamps, sealed paper, etc.

It is proposed to establish a monetary system with a unit of the peso of 100 centavos to contain 0.75233 gram of pure gold. Provision is made for the coinage of silver coins of 1 peso, 50 centavos, and 20 centavos, and minor coins of 10 centavos, 2 centavos, and 1 centavo. The notes of the national bank will be legal tender, while they are redeemed in the legal currency and kept at a par of exchange of 200 per cent with United States gold. The importation of silver coins of Nicaragua, Guatemala, etc., will be prohibited and their legal tender quality annulled. A reserve fund of at least 30 per cent of the coins in circulation of the new currency, to be known as the "gold standard reserve", will be established from the seignorage profits on coinage of the subsidiary currency.

NEWFOUNDLAND (AND LABRADOR).

Coinage executed by the Royal Mint at Ottawa during the year ended Dec. 31, 1919.

Denomination.	Pieces.	Value.
Silver:		
50 cents.....	300,000	\$150,000
25 cents.....	160,000	40,000
10 cents.....	50,000	5,000
5 cents.....	100,000	5,000
Total.....	610,000	200,000
Bronze:		
1 cent.....	300,000	3,000

There is very little use of the precious metals in the Colony for industrial purposes. There is practically no mining or production of gold and silver in Newfoundland.

Approximate stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1919.

Character of stock.	In banks.	In circulation.
Gold coin.....	\$1,192,482	
Silver coin.....	242,000	\$2,130,000
Total gold and silver.....	1,434,482	2,130,000

PANAMA.

No gold or silver coinage was officially withdrawn during the year ended December 31, 1920.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1920, was: Gold, balboa 50,000 (\$50,000) in old jewelry, plate, etc., balboa 50,000 (\$50,000) in foreign coins; silver, balboa 100,000 (\$100,000) in old jewelry, plate, etc., balboa 100,000 (\$100,000) in domestic coin.

No official data are available on the stock of gold and silver used for monetary purposes.

There was no premium on gold as compared with the actual currency.

No official data available on the exports and imports of gold and silver.

SALVADOR.

SALVADOR PERMITS CIRCULATION OF AMERICAN BILLS.

[From Commerce Reports, Feb. 2, 1921.]

A decree was published in the *Diario Oficial* of Salvador, December 16, 1920, permitting the free circulation of American bills throughout the Republic. According to a translation of the decree furnished by Chargé d'Affaires Frank D. Arnold, the bills will be received in fiscal offices in payment of duties and taxes in the legal equivalent of \$1 equaling 2 colones. Authorization is also given for the free importation of American bills into the country.

SOUTH AMERICA.

ARGENTINA.

AMOUNT OF GOLD IN THE CONVERSION FUND—CIRCULATION.

[From Bulletin of the Pan American Union, March, 1921.]

The amount of gold in the conversion fund has been increased by the remittance of 2,800,000 pesos from the embassy at Washington, raising the amount in the conversion office to 466,476,759 pesos coined gold and reducing the amount deposited with the embassy in Washington to 4,123,158 pesos. These amounts total 470,599,917 pesos gold against a circulation of 1,362,563,496 pesos.¹ The previous year on the same date the coined gold in the conversion fund amounted to 304,823,909 pesos and the amount in the legations to 78,996,805 pesos, the sum of these, 383,820,713 pesos, guaranteeing the fiduciary currency, or 1,165,338,034 pesos national money.

CIRCULATION OF MONEY.

[From Bulletin of the Pan American Union, July, 1921.]

While on December 31, 1919, the total amount of money in circulation was 1,177,174,475 pesos¹ (\$499,724,691), on the same date in 1920 it had increased to 1,362,563,507 pesos¹ (\$578,424,560). The gold guaranty amounted in 1919 to 77.04 per cent (\$384,987,902) of the value of the money in circulation, and in 1920 to 80.16 per cent (\$463,665,127).

CURRENCY IN CIRCULATION—GOLD STOCK.

[Trade Commissioner George S. Brady, Buenos Aires, Feb. 1, 1921, in Commerce Reports, Apr. 13, 1921.]

No gold is circulated in the country, but the paper currency (pesos, moneda nacional) is protected by deposits of gold in the Treasury and in legations abroad. The amount of gold on deposit in the Treasury and in the legations on December 31, 1920, was 471,000,000 gold pesos, as compared with 389,000,000 pesos at the end of 1919 and 379,000,000 at the end of 1918. On December 31, 1920, there were in circulation 1,177,000,000 paper pesos under the law of metallic guaranty, and 293,000,000 more which were in circulation before the sanctioning of this law. These deposits, together with the gold on deposit in the Banco de la Nación, bring the gold guaranty to about 80 per cent of the value of the notes in circulation. In addition to the 25,000,000 gold pesos on deposit in the Banco de la Nación on December 31, 1920, there were 21,000,000 gold pesos on deposit in the other banks of the country.

ARGENTINE—UNITED STATES EXCHANGE.

[Prepared by Latin American Division, Bureau of Foreign and Domestic Commerce, in Commerce Reports, Nov. 19, 1920.]

An understanding of exchange on Argentina requires a study of the international trade and financial conditions of that country for the past two to three years. Before the war Argentina had a favorable balance of trade, its financial system was sound, a free gold market was maintained, its credit was regarded favorably throughout the world, and exchange was subject to normal fluctuations. The war brought about great changes in its invisible factors of exchange, such as payment of ocean freights, interest on foreign investment, remittances by immigrants to relatives abroad, and the investment of new foreign capital. Recently there has been an increase in the invisible items which Argentina has been required to pay, and the situation differs much from that before the war.

ARGENTINA'S FAVORABLE BALANCE OF TRADE—THE GOLD EMBARGO ACTS.

Upon the outbreak of the war and the consequent increased demands for foodstuffs, wool, hides, and skins, and various other commodities which Argentina furnishes to the world, the trade balance of that country became even more favorable than in prewar years. . . . As a protection to her exchange and for the maintenance of her gold fund, however, Argentina passed a gold-embargo act soon after the outbreak of the European war. Although passed as war-emergency legislation, this act still operates as one of the contributory causes of the present situation. For their own protection the Allies were reluctant to ship gold, and the mercantile balance therefore practically determined the movement of the European exchanges upon Buenos Aires during the greater part of the war. The conversion of Argentina securities on the part of England and France tended to steady the rate to a certain extent.

Upon its entrance into the war the United States believed it necessary to protect the gold fund of the country and a gold embargo act was passed in the fall of 1917. Its trade with Argentina then became the governing factor in exchange on that country. Its unfavorable balances, together with the operation of its gold embargo, caused a depreciation of the American dollar on the Buenos Aires market.

On January 2, 1919, the maximum decline in the American dollar was reached for that year, at which time \$100 American gold bought 97.70 Argentine pesos instead of the normal purchase of 103.65 pesos. This represents a discount on the dollar to the extent of about 6 per cent. During the first half of the year 1919 the American dollar stood at a discount of from 3 to 6 per cent. The credit which the Argentine embassy had established in New York then exceeded the amount of \$60,000,000.

* * * * *

The week of October 11 (1920) it was announced that all gold held in this country by the Argentine Government had been exhausted, and the following week a new low record for the peso was made when it took 127.50 Argentine pesos to buy \$100 of United States exchange. According to cable quotations on November 15, \$100 United States currency bought 132 Argentine gold pesos, thus indicating a premium on the dollar in the Argentine market of about 28 per cent.

GENERAL ECONOMIC COURSES AFFECTING ARGENTINE EXCHANGE.

Exchange is dependent in part upon the balance of trade and in part upon the credit of the country concerned. Argentina may be said to be in the "interest-paying" stage of development. In order for Argentine exchange to be approximately normal it is necessary that the exports of the country should be much in excess of the imports. In recent months, however, Argentina's exports have declined. This trade condition is reflected in the exchange quotations.

BOLIVIA.

CIRCULATION OF GOLD AUTHORIZED—UNITED STATES DOLLAR LEGAL TENDER.

[From Bulletin of the Pan American Union, March, 1920.]

On January 5 the National Congress authorized the circulation of gold as a medium of exchange in the country. Another decree dated January 12 authorized the acceptance of the American dollar as legal tender at the rate of exchange of 2.57 bolivianos. This rate was fixed to aid the banks to keep their reserve in coin and American gold.

BRAZIL.

The amount of gold and silver coin withdrawn from monetary use during the year ended December 31, 1920, was as follows: Domestic gold coin, 140 milreis (\$76); domestic silver coin, 1,785 milreis (\$975); foreign gold coin: France, 12,220 francs (\$2,358); United States, \$120; Russia, 3 coins; Turkey, 12 coins.

The amount of old silver plate, jewelry, etc., returned from use in the industrial arts during the year 1920 was 22,121 grams (712 ounces).

The total import of United States gold coin during the year ended December 31, 1920, was 270,000 milreis (\$147,474).

Money issue for Brazil.

[From Bankers' Magazine, New York, December, 1920.]

Dispatches from Brazil report that Congress has passed a bill permitting the issue of approximately \$8,000,000 in paper money at the present rate of exchange and allowing the Bank of Brazil to carry out rediscounting operations to the limit of approximately \$17,000,000. This bill had previously been passed by the Senate.

Authorization of additional paper money issue.

[Assistant Trade Commissioner R. M. Connell, Rio de Janeiro, Nov. 17, 1920, in Commerce Reports, Jan. 17, 1921.]

Steps have been taken by the Federal Government of Brazil to relieve the tightness of money, which has been so long experienced, by authorizing the President of the Republic to emit paper money up to an amount not greater than 50,000,000 milreis (approximately \$12,500,000). This fund, which is "to attend to the urgent necessities of commerce and production due to the exceptional crisis," is to be employed for loans to States through the Bank of Brazil or through a special rediscount department which shall be established for this purpose or in any other suitable way. The period of these loans is not to exceed one year, with interest not over 8 per cent.

The Government is also authorized to apply the total or partial amount of credit raised to the benefit of national production under the form judged most convenient; or to the establishment of a special fund in New York and London, of which 50,000,000 milreis may be used for buying and selling bills of exchange, in order to attend to the necessities of legitimate commerce and to prevent abrupt oscillations in exchange.

The Government will institute a close regulation and supervision of banks and banking houses to prevent speculation in exchange, allowing only legitimate commercial transactions. Present restrictions on Brazilian exports of food products of prime necessity are suspended, but the Government is authorized to intervene at any time a shortage is imminent to purchase sufficient stocks to supply the population in the interior of the country, the necessary credits being opened at that time.

CREATION OF SPECIAL DEPARTMENT OF BANK OF BRAZIL.

Of great importance to business interests in Brazil is the establishment by congressional decree of a special department of the Bank of Brazil for emission and rediscount to be entirely separate from the bank proper (in the event that a separate bank is not created for this purpose), to be under the charge of a director whom the President of the Republic will nominate. This department will be known by the name of *Carteira de Emissao e Redesconto*. The limit to the operations of this division will be 100,000,000 milreis, which amount can not be exceeded except under special conditions and by the order of the President of the Republic.

Paper eligible for rediscount will be bills of exchange and drafts drawn in Brazilian money, to order, for an amount not less than 5,000 milreis, duly stamped and guaranteed by no less than two commercial or banking firms of sound repute, and also by the payee bank, whose reserve funds have a relation sufficiently satisfactory with the realized capital at the judgment of the Government to secure the operations. The period of rediscount will not exceed four months, with interest at 6 per cent per annum. Only agricultural or commercial paper will be accepted, that based on real estate or speculative mercantile transactions being excluded. Against the integral value of the paper rediscounted the Bank of Brazil will deliver notes, which will have free circulation, and whose amounts will be strictly limited to the total of the rediscount operations.

The interest received from these operations will be divided 30 per cent to the Bank of Brazil, 20 per cent to the National Treasury, 30 per cent for the formation of a reserve fund in the rediscount department, and 20 per cent converted into gold for the paper-money guaranty fund.

PERNAMBUCO.

[Vice Consul Edward Power, Aug. 18, 1920, in Supplement to Commerce Reports, Nov. 24, 1920.]

EXCHANGE AND ITS EFFECT ON TRADE.

The exchange element in trade was given serious consideration in this district during 1919, owing to a feeling of uncertainty in face of abnormal conditions following the signing of the armistice. This feeling was demonstrated by the fact that during the greater part of the year local importers seemed to be inclined to place only such orders as were necessary to meet local requirements. . . . Exchange fluctuations were very marked, the dollar being worth 4.1 reis in the early part of September and descending to 3.28 during the latter part of November and the early part of December. Owing to the sharp decline in the value of the dollar, there was a noticeable increase in import orders during the last-mentioned period. The average rate of exchange during the year was 3.8 reis, which is considered about normal.

ACTIVITIES IN BANKING DURING THE YEAR.

During the year a New York banking house opened a branch in Pernambuco, and during the latter part of the year the Banco Nacional Ultra-marino, a Portuguese institution, opened an agency in Parahyba. These were the only additions to the financial institutions of the district during 1919.

There seems to be an indication on the part of many business men, as well as Government officials here, to require branches of foreign banks to bring into the country foreign capital. This sentiment is due largely to the fact that there is a stringency of money in Brazil, and they feel that foreign institutions should bring in their own capital and operate, to some extent at least, on such.

The silver coinage executed in Chile for Uruguay during the year ended December 31, 1920, was 1,500,000 twenty-centavo pieces; value, 300,000 pesos (\$109,500).

The quantity of gold produced during the year ended December 31, 1920, was as follows: From deep mines, 187.4 fine kilos (6,025 ounces) valued at 341,250 pesos (\$124,556); from placer mining, 18.8 fine kilos (604 ounces) valued at 34,166 pesos (\$12,471); total, 206 kilos (6,629 ounces) valued at 375,416 pesos (\$137,027).

MINTING OF NICKEL COINS IN PARIS.

[From the bullion letter of Samuel Montagu & Co., Nov. 18, 1920.]

Chile has accepted a tender for the minting in Paris of nickel 5, 10, and 20 centavos coins. We are informed that this new money has been rendered necessary by the melting down of old coin containing silver. This replacement of silver by nickel in an American silver producing country is well worth notice.

PAPER CURRENCY IN CIRCULATION.

[Commercial Attaché Charles A. McQueen, Santiago, Jan. 20, 1921, in Commerce Reports, Feb. 25, 1921.]

On December 31, 1920, the total paper circulation of Chile amounted to 302,821,919 pesos, of which 195,698,919 pesos were in "billetes fiscales" or bills backed by the gold conversion fund or by deposits of gold made by banks to which they were issued, and 107,123,000 pesos were bills of 500 pesos or more denomination, called "vales del tesoro" or treasury notes. The latter class of currency represents deposits of bonds made by banks in security of the amount issued to the extent of 31,227,500 pesos, while 75,895,500 pesos were issued to nitrate producers secured by stocks of nitrate.

HOW EXCHANGE AFFECTS BUSINESS IN CHILE.

[Commercial Attaché C. A. McQueen, Santiago, July 8, 1920. From Commerce Reports, Oct. 15, 1920.]

It is generally known that the circulating currency of Chile is inconvertible paper. Practically all retail business is conducted in this money, which originated in the debasement of the Chilean gold peso of 18 pence. The approximate average value of the paper peso for recent years has been 20 cents, and on this basis of 5 to 1 as compared with the American dollar the majority of importers fix their wholesale and retail prices. However, the actual fluctuations of exchange may depart so radically and so suddenly from this average value that an ever-present element of uncertainty is added to merchandizing operations. As an example, there may be cited the course of exchange in the month of June, 1920. During the first week of that month quotations fluctuated between 5.35 and 5.41 pesos to the American dollar. This is con-

sidered a "low" exchange, taking the Chilean point of view of a low value of the peso in relation to the dollar. The next week opened at 5.57, with a gradual weakening to 5.72 up to Monday, June 21. On that day the news of large nitrate sales caused a quick rise to 5.05, and strength was shown to the month's end, closing at 4.87.

September 4, 1920: Exchange on the United States has dropped to nearly 6 paper pesos to the dollar, as against a maximum of about 3 to 1 during the war prosperity.

THE CURRENCY SYSTEM IN CHILE.

[Economist Consul Dana G. Munroe, Valparaiso, in Commerce Reports, Apr. 16, 1921.]

The most serious defect of Chile's monetary system is the fact that it permits constant fluctuations in exchange. The value of the peso may fluctuate 5 to 15 per cent from one month to another, upsetting all calculations of merchants or manufacturers having obligations to meet abroad.

Fluctuations have occurred in spite of the maintenance of a large reserve in specie. The presence of the conversion fund undoubtedly has stabilized exchange rates to some extent, so long as there was still a general belief that the redemption of the notes in gold would be undertaken in the near future, but owing to the successive postponements of the conversion, the value of the paper peso has fallen steadily.

The fact that the value of the local currency depends solely upon the supply and demand of drafts on foreign countries is a constant incentive to speculation in exchange.

Aside from its instability, the present currency system is open to grave criticism on the ground of its inelasticity. The amount of the fiscal issues is fixed at 150,000,000 pesos, and is not increased or decreased to meet the demands of commerce. The guaranteed notes of the Caja de Emision offer a means of expanding the circulation with adequate safeguards, but they have not been made use of to any great extent. The "Vales de Tesoreria" afford another means of expanding the currency, but, unfortunately, they increase the amount of money in circulation at the very times when the export business is dull, and a contraction rather than an expansion is needed.

POSTPONEMENT OF CONVERSION OF PAPER MONEY.

[Commerce Reports, Jan. 3, 1921.]

A cablegram received from Ambassador Shea at Santiago, Chile, states that on December 29, 1920, the Chilean Congress passed a law postponing the conversion of paper money until December 31, 1921.

INFLUENCE OF GOLD EXPORTATIONS UPON COLOMBIAN EXCHANGE.

[American Legation, Bogota, in Commerce Reports, Jan. 31, 1921.]

The amount of gold in circulation in Colombia June 1, 1920, according to the official report of the Colombian Ministry of the Treasury, was \$23,291,642, and the figures given by the Board of Conversion for the same date are \$23,948,492. This is the latest official information available. Since the date given, due to the hoarding of gold brought about by the unsettled economic condition of the country, it has become increasingly difficult to determine the amount of gold in circulation. Nevertheless, incident to an investigation made by the legation, the National Inspector of Monetary Circulation stated that while it was virtually impossible to give anything like exact figures in this regard, he would place the amount of gold coin, at the end of November, 1920, in the country at between \$7,000,000 and \$9,000,000. In this connection a cir-

cular information sheet has been issued by the official mentioned, showing the stocks of the various circulation media in the Bogota banks on various dates of the present year. It is probable, however, that no deductions may be validly drawn therefrom as to the actual gold circulation of the country, since it has naturally been to the interest of the banks to lower as little as possible their gold reserves.

As to the effect of the considerable exportation of gold upon the rate of exchange, there is scarcely room for doubt that this exportation has tended to lower the rate, in spite of the fact that up to the present time the latter has been the subject, on the whole, of a continued upward movement. This has been occasioned by the amount of foreign drafts coming due from month to month having been more than sufficient to offset the effect of the gold exported. For example, it is stated that foreign drafts to the amount of \$5,052,435 were drawn, through Bogota banks alone, for the single month of September.

In this connection it may be of interest to state that the Colombian Congress on November 20, 1920, passed a law permitting the free exportation of gold in all its forms except money, upon proof that such gold is not the result of the melting down of gold coins. It is apparently the general belief here that this permission, together with the decrease in imports incident to the high rate of exchange, will, for a time at least, effect a gradual lowering of this rate.

The very active exportation of gold, which has been carried on for some months past by speculators on the coast, has been closely correlated with the fact that the rate of exchange has averaged considerably lower on the coast than in the interior. This, of course, has had the effect of drawing gold from the interior for the purchase of drafts on the United States.

MEASURES ADOPTED AGAINST SCARCITY OF CIRCULATION OF MONEY.

[From Bulletin of the Pan American Union, March, 1921.]

The government issued a decree authorizing the banks to issue gold certificates to bearer based on paper currency, coin, or other specie guaranteed by commercial or agricultural holdings in the conditions expressed by the law of 1918. The emission will be made through the Junta de Vigilancia, which shall authorize the notes and securities presented by the banks which desire to take part in the emission, after which the corresponding amount of certificates will be turned over to them. The banks' resources can not be used to guarantee the certificates except as these resources exceed the sum of the certificates and according to the prices which the Junta de Vigilancia assigned to the various notes, less 20 per cent. For values in paper money or coin, certificates may be issued to the sum of these values. The issue of certificates is fixed at 8,000,000 pesos, which shall be entirely redeemed within 3 years by means of the consignment made by the banks to the Junta de Vigilancia in the four last six months' periods of the time.

DUTCH GUIANA.

The estimated quantity of gold and silver used in the industrial arts during the year ended Dec. 31, 1919, was as follows: Gold, 18.9 kilos fine (608 ounces), valued at 31,250 guilders (\$12,563); silver, 134 kilos fine (4,304 ounces) valued at 12,000 guilders (\$4,824).

The total import of United States gold coin during the year ended December 31, 1919, was 19,237 guilders (\$7,733).

The quantity of gold produced from placer mining during the year ended December 31, 1919, was 496 kilos fine (15,932 ounces) valued at 819,260 guilders (\$329,343).

ECUADOR.

Intrinsic value of silver coin.

[From Bulletin of the Pan American Union, March, 1921.]

Inasmuch as the intrinsic value of the silver in Ecuadorean coins, under exchange rates which have prevailed for some time, is greater than the nominal value of the coins, the Government of Ecuador has deemed expedient, in order to check the exportation of silver coins, to require the banks of issue of the Republic, as long as the condition referred to exists, not to diminish their reserve deposits of these coins.

FRENCH GUIANA.

There is practically no metallic currency in circulation. Notes of the bank of Guiana are in circulation but can only be redeemed at a discount. The amount in circulation is unknown.

The coinage circulating in French Guiana is that of the French Republic.

Gold is at a premium. The actual currency is inconvertible paper currency.

BANK NOTES TO BE CIRCULATED IN PARAGUAY.

[From the Commercial and Financial Chronicle, New York, Feb. 12, 1921.]

The President of Paraguay signed a decree on November 18, 1920, authorizing the Oficina de Cambios (Exchange Office) to put into circulation the notes acquired from El Banco de la Republica, numbered from 1 to 10,000, with a value of 1,000 pesos Paraguayan paper currency for each note, except four which were canceled. The notes will bear a stamp of authorization which will read "Emission of the State, Law No. 432, September 8, 1920," and will be signed by the president and manager of the Exchange Office. It is hoped that by thus increasing the amount of money in circulation the present financial crisis will be considerably alleviated.

FLUCTUATION OF PERUVIAN EXCHANGE.

[Vice Consul James H. Roth, Callao-Lima, Sept. 1, 1920. In Commerce Reports, Nov. 8, 1920.]

Up until September, 1914, Peru was on a strict hard money basis—that is, their legal tender was gold, but the subsidiary coins, the silver sol and fractional currency, were of other metals and were in principle fiat money. This system, of course, is inelastic in the extreme, and when the war broke out in Europe in 1914 Peru felt the strain, as did practically every other country. The tendency was to hoard the circulating medium, most especially in Peru, where, as has been stated, the circulating medium consisted entirely of hard money. A moratorium was declared which lasted until an agreement could be reached between the banks in existence in Peru at that time and the Government, working toward an issue of currency. This was to be guaranteed by a 40 per cent gold reserve, 40 per cent bank discount portfolio, and 20 per cent Peruvian Government bonds; but as time went on it was discovered that the original issue of 2,500,000 Peruvian pounds (pound=\$4.87 at normal exchange) was not sufficient, and in the early part of 1918 it became increasingly evident that this amount of circulating medium—since the gold and silver coin had practically all disappeared—would have to be largely increased.

ISSUE OF CURRENCY SECURED BY DEPOSITS IN ENGLAND AND THE UNITED STATES.

The difficulty of merely doubling or tripling the original issue was that both the United States and Great Britain had in the meantime prohibited the exportation of gold, so that after considerable delay an issue of 3,000,000 pounds was authorized, to be secured by bank deposits of the equivalent in dollars of 2,400,000 pounds in banks in the United States and 600,000 pounds in the equivalent in pounds sterling in banks in London at certain fixed rates, representing something like 1½ per cent over the intrinsic parity of the Peruvian pound and the American dollar, and in turn the relation which the British pound bore to the American dollar at the time. Just prior to the making of this issue dollar exchange on New York had risen to \$6 to the Peruvian pound, amounting to 25 per cent discount. This heavy discount, of course, was due to the dearth of circulating medium here and the heavy trade balance in Peru, due to the high prices received for their principal products and the practical suspension of imports, or, at least, their reduction to a meager percentage of their normal value. As soon as the issue came out, the dollar remained stationary at the rate fixed by the law, with mild fluctuations until June, 1919, when the United States removed the restrictions on the export of gold. The rate fixed by Peruvian law No. 2776 provided for the sale of drafts on the United States at \$5.01½ per Peruvian pound.

IMPORTATION OF GOLD—ATTITUDE TOWARD PAPER MONEY.

In view of the fact that the gold point at that time, even taking into consideration the higher rates of freight and insurance, including war risk, still remaining as an aftermath of the war, was only about \$4.91, anything above this rate was out of line with the market. The Banco Mercantil Americano del Peru (owned by the Mercantile Bank of the Americas (Inc.) of New York, imported \$1,000,000 in gold and bought the dollar exchange at the current rates. This, of course, had the tendency to bring the market into line with the actual cost of importing, and when it became generally known that gold could be imported the physical effect of this on the commercial community was to make them much freer in their operations.

There has always been a tendency in Peru to doubt the stability of a paper issue in this country, due to the unfortunate experience of some 30 or 40 years ago, when a paper issue depreciated so much that it finally was entirely repudiated. This tendency is illogical, but, nevertheless, it is the best explanation of the reason why the present issue, which is remarkably well secured by gold reserve and deposits of substantial nature abroad, is being held at lower than its actual parity.

The reasons for its rapid decline and for its remaining below par for several months was really paradoxical because it occurred during the months of March and April, when Peruvian products were at their highest points, and when imports from abroad were in very much smaller volume. From the message of the President of Peru to Congress on July 28, 1920, he stated that the exports during the first half year of 1920 amounted to 20,000,000 pounds (approximately \$100,000,000), whereas the imports during the same period amounted to 7,000,000 pounds (approximately \$35,000,000), or a trade balance in favor of Peru of \$65,000,000 for the half year. Under ordinary circumstances, of course, this would put the Peruvian pound above par.

RECENT CHANGES IN VALUE OF PERUVIAN POUND.

Within the last four weeks a marked change has occurred and the Peruvian pound has advanced considerably above par, having gone as high as \$4.94 as against the mint value of \$4.87. One explanation which has been given for this advance is that the countrymen or field laborers have seen the Peruvian paper money maintain its value during the past three or four years and have finally become convinced that it is safe. Of course, the great mass of the lower class of people does not understand underlying principles. It has been related that in some cases the paper currency is preferred even to gold coin and that one particular bill, the 5-pound note, which is blue in color, either through superstition or some ignorant rumor, is supposed to be of greater than its nominal value and is eagerly sought for and hoarded by the country people. No doubt the rumors of a threatened tenseness in the relations with Chile have accentuated this tendency, so that within the last three weeks all the banks have noted a scarcity of circulating medium, and in order to protect their cash reserves have been forced to limit their accommodations as well as refuse to buy foreign exchange. The principal exporting houses, unable to dispose of their foreign bills, have naturally had to avail themselves of the credit lines already authorized them under the prevailing banking custom in Peru. This scarcity of currency and the refusal of the banks to buy exchange have naturally had a depressing effect on all foreign exchange, and in consequence have caused the relative value of the Peruvian pound to rise. It has also resulted in forcing the 90-day drafts on London, which are the customary form of foreign exchange here, to their real relationship as compared with the New York quotation on London, which formerly was not the case.

NEW ISSUE OF PAPER MONEY.

In order to relieve the situation as regards the scarcity of the circulating medium the Peruvian Government has recently granted authority to the Junta de Vigilancia to issue and place in circulation paper money equivalent to 1,000,000 pounds which will be entirely guaranteed and covered by gold deposited with the Junta de Vigilancia by the various Lima banks. The gold ingots guaranteeing this new issue will arrive in Peru from the United States within the next few days.

PERU WILL MINT ADDITIONAL NICKEL COINS.

[From Vice Consul in Charge James H. Roth, Callao-Lima, Peru, May 24, 1920.]

The Government of Peru has authorized the Junta de Vigilancia to mint additional coins, as per the following law:

"ARTICLE 1.—The Junta de Vigilancia de la emission de cheques circulares (Bank Notes Vigilance Board) is hereby authorized to order the minting of nickel coinage to a nominal value of £p 200,000 in pieces of 20 centavos, and of £p 100,000 in pieces of those provided in laws Nos. 2425 and 2499.

"ART. 2.—Holders of 50 centavos deposit certificates may request the vigilance board to exchange them for 'cheques circulares' (notes), in which case the security (notes) which the vigilance board is authorized to issue under article 2 of law No. 2776 and article 1 of law No. 3063.

"ART. 3.—The vigilance board shall use the coinage ordered to be minted under article 1 of the present law for the withdrawal of the 50 centavos deposit certificates

still in possession of the public, issued under law No. 2429, and may put into circulation the nickel coinage, not exchanged for said 50 centavos deposit certificates, as circumstances may require, in amounts equal to those which the Government, banks, the industries, and merchants may deposit with the board in Lima either in circular checks (notes), in Peruvian or English gold coin, in gold bars (in a proportion of 7 grams and 323 milligrams to the pound (£); in minted silver, or in silver bars (in a proportion of 25 grams and nine-tenths fine to the sol).

"ART. 4.—The amounts received by the vigilance board for the nickel coinage, and those corresponding to the security for the 50 centavos deposit certificates, exchanged for nickel, shall go to increase the 'conversion fund' of the 10 and 20 centavos pieces, which conversion shall take place at the time fixed by law No. 2425.

"ART. 5.—The outlay accruing from the performance of the provisions of this law shall be covered with a part of the interests paid on the amounts deposited in foreign banks and referred to in law No. 2776."

EFFECT OF INFLATION IN PERU.

[Latin American Division, Bureau of Foreign and Domestic Commerce. In Commerce Reports, Nov, 29, 1920.]

Owing to Peru's unusually sound currency, its financial depression neither came so soon nor is as yet so severe as that of other South American countries. Its foreign trade for the first half of 1920 was nearly double that of the same period of 1919. There is, however, as a consequence of an exaggerated rise in prices and an inflation of credits, an overstocked market, with business generally inactive. Recently, with sugar at \$0.20 a pound and cotton at \$0.50, fortunes were made almost over night, and there was an appearance of general prosperity; but now that the reaction has come, credit, inflated even beyond the high prices, is being contracted with difficulty. The Peruvian pound, in spite of its sound gold backing, is quoted in New York for \$4.45 instead of its normal, \$4.8665.

FINANCIAL CONDITIONS IN PERU.

[From Bankers' Magazine, New York, Nov. 1920.]

A bulletin issued by the Guaranty Trust Co. thus summarizes the financial condition of Peru:

"Financially, Peru is in splendid shape. On January 1, 1920, her total public debt was \$45,158,955, having been reduced to \$1,935,000 from June 30, 1918. Her monetary system is one of the most solid in existence. The Peruvian bank notes, amounting to more than \$30,000,000, are backed by deposits in gold equal to 91.21 per cent of the total issue. The banks are prospering and are on a safe basis. The publication in newspapers twice monthly of the balance sheets is required by law.

"Credits of 60 to 120 days, and even longer, were allowed before the war, but terms reverted to a cash basis during that period. Recently, however, credit has been extended again, though not to the extent prevailing before the war. Bankruptcy has been unknown there for the last five years.

"Recently, money being short, Peru has recalled \$3,155,000 in gold bars from her New York deposits. Export taxes are collected on all important products, including minerals, and a surcharge of 10 per cent on imports is now required in the schedule of customs duties."

BILLS GENERALLY DRAWN IN DOLLARS OR STERLING.

[Vice Consul James H. Roth, Callao-Lima, in Commerce Reports, Jan, 18, 1921.]

Bills of exchange representing exports are usually drawn in United States dollars or the English pound sterling. The market for bills drawn in dollars on New York compares very favorably with that for other bills, and at the present time the dollar exchange is being sold in Peru at a premium of several points.

Bills are drawn in dollars, pounds sterling, francs, and pesetas, but the two former predominate, as the commerce of this country is mostly with the United States and Great Britain. There are a few bills drawn in lire at the present time, but not in any great quantities.

URUGUAY.

The total import of United States gold coin during the year ended December 31, 1919, was 16,497,928 pesos (\$17,062,157).

Approximate stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1919.

The 10-centesimos coins are not in circulation.

GOLD RESERVE IN DECEMBER, 1920.

[From the Pan American Union, Washington, July, 1921.]

The gold reserve in December, 1920, amounted to 60,207,219 pesos (\$62,266,306).

The silver coinage executed in Chile for Uruguay in 1920 consisted of 1,500,000 20-centavo pieces; value, 300,000 pesos (\$109,500).

TWENTY-CENT NOTES ISSUED BY URUGUAYAN BANK.

[From Vice Consul Sherwood H. Avery, Montevideo, Uruguay, July 6, 1920.]

Twenty-cent notes for temporary purposes have been issued by the Bank of the Republic for the purpose of tiding the market over a nickel-shortage crisis. Nickel coins of small denominations had become so scarce that premiums of 8 per cent and higher were being paid by the local merchants for small change.

The Bank of the Republic has been authorized to coin from 300,000 to 500,000 pesos in 20-cent silver pieces, but since it will be several months before these coins will be ready, the Bank of the Republic began the first of the month the issuance of 20-cent notes to relieve the crisis of small change.

These notes consist of an old issue of 1-peso notes of the current size with the corners cut off and with the new value of 20-centesimos stamped in large black letters on the face and back. They are an issue prepared some time ago but were never put in circulation because it was feared that they would be too easily imitated. The amount of these notes to be issued is yet unknown.

Since the mint in Buenos Aires is too busy to take the order, and the railway line to Chile is blocked, it is probable that the 20-cent pieces will be minted in the United States. This would cause a greater delay than has been anticipated, however, and it is probable that instead of sending silver coins from this country to be melted down and coined in the American mints, the law will be so modified that the necessary silver may be purchased in the United States.

VENEZUELA.

The amount of gold coin withdrawn from monetary use for industrial purposes during the year ended December 31, 1920, was about 25,000 bolivars (\$4,825). It is not known, however, whether these coins were domestic or foreign.

The total import of United States gold coin during the year ended December 31, 1920, was 9,298,469 bolivars (\$1,794,604).

Approximate stock of gold and silver used for monetary purposes, also of paper money, on Dec. 31, 1920.

United States equivalent.....	\$1,537,863	\$4,857,165	\$6,395,028

Practically all Government funds are deposited in the Banco de Venezuela, which acts as fiscal agent of the Government and whose specie is included in that of the banks of emission, four in number: Banco de Venezuela, the Bank of Caracas, the Bank of Maracaibo, and the Commercial Bank.

Gold circulates without a premium to silver and notes except in the case of large quantities, when certain persons have paid one-half per cent premium in 1920.

By the law of June 20, 1920, the Federal Executive is authorized to arrange for the coining of 200,000 bolivars in nickel coins, in conformity with the monetary law and in the form which it considers convenient.

CHANGE IN METHOD OF CONVERTING VALUES IN FOREIGN CURRENCIES FOR CUSTOMS PURPOSES.

[Trade Commissioner P. L. Bell, Caracas, Nov. 20, 1920, in Commerce Reports, Dec. 17, 1920.]

By an executive decree of November 19, 1920, it is provided that the consignees shall convert the values given in the consular invoices into bolivars at the rate current on the date of the arrival of the shipment, instead of on the gold basis as was the practice previously. This change, which affects imports subject to ad valorem duties, will affect injuriously imports from the United States, in view of the premium on the dollar. On the other hand, it will be of benefit to importers from countries whose currency is at a discount in Venezuela, such as Great Britain, France, Spain, etc. On November 20, for instance, the dollar was at a premium of 13 per cent while the franc was at a discount of 64.5 per cent. This would result in a larger amount of duty in bolivars on a shipment from the United States, subject to ad valorem duty, than on a similar shipment from France or other countries with depreciated currencies.

EUROPE.

AUSTRIA.

No money, either gold or silver, was coined in Austria during 1919. All Austrian metal money has, in consequence of the financial situation, disappeared from circulation. There is no possibility of ascertaining, even approximately, the quantity of gold and silver coin which has been melted down.

AUSTRO-HUNGARIAN BANK—MONETARY STOCK.

¹ No fixed value.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1920, was as follows: Gold, 1,624 fine kilos (52,212 ounces); silver, 29,490 fine kilos (948,104 ounces).

The quantity of silver produced during the year ended December 31, 1920, was as follows: From lead ores, 73 fine kilos (2,347 ounces) valued at \$2,393; from copper ores, 362 fine kilos (11,638 ounces) valued at \$11,864.

The amount of notes of banks of issue circulating on December 31, 1920, was 30,645,658,090 kronen (\$6,208,810,329) covered by 8,753,989 gold crowns (\$1,773,558).

Premium on gold: Highest, 200,000 kronen; lowest, 100,000; average, 120,000. By order of the Ministry of Finance of August 2, 1920, the unstamped 1 and 2 crown Austro-Hungarian bank notes are no longer acceptable. By order of January 9, 1920, the 1 and 2 crown notes intended for circulation in the Austrian Republic must bear an official stamp.

CIRCULATION OF AUSTRIAN NOTES.

[Carol H. Foster, with American Mission, Vienna, in Commerce Reports, Aug. 20, 1921.]

There are four kinds of Austrian notes in circulation, that is, not in the possession of the Austro-Hungarian Bank: Notes of the Kriegsdarlehenskasse; notes of fractional amount issued by various municipalities; notes not stamped for any country; and notes of the Austro-Hungarian Bank stamped for Austria. There are no coins or metal money in circulation.

Notes of the Kriegsdarlehenskasse originated in September, 1914, as a war measure. They are direct obligations of the Government and are in circulation only in the sense that they must be accepted when offered in payment of duties and taxes. They are issued only for short periods of time and must be secured by mortgages, goods, securities, Austrian war bonds, or other approved collateral. The total may not exceed 500,000,000 crowns at any one time. These notes are generally discounted at the Austro-Hungarian Bank rather than circulated as money. Since 1914 they have been outstanding as follows:

	Crowns.
Dec. 31, 1914.....	43, 952, 500
Dec. 31, 1915.....	105, 363, 750
Dec. 31, 1916.....	118, 661, 250
Dec. 31, 1917.....	106, 554, 000
Dec. 31, 1918.....	470, 431, 750
Dec. 31, 1919.....	433, 223, 500
Dec. 31, 1920.....	452, 999, 500

Fractional currency has been issued in Austria to the estimated extent of 250,000,000 crowns. Part of this is used to make change, but many issues have been made as a means of financing municipal needs and have been bought up chiefly by collectors.

Notes issued by the Austro-Hungarian Bank, but not stamped for Austria or any other country amount, it is said, to about 6,000,000,000 crowns. Not all of them are in Austria, where they are in actual but not legal circulation. It has not yet been decided whether any of them will be obligations of the bank or of some State.

Austrian currency consists nearly altogether of notes of the Austro-Hungarian Bank which were stamped for Austria on February 27, 1919. The total outside of the bank on April 30 was 45,036,722,777 crowns, only a part circulating in Austria. Great sums have been hoarded by peasants and other individuals, and large amounts have been smuggled to foreign countries despite the Government's prohibition. Five thousand crowns is the maximum allowed for anyone to take out of the country. Until April 26, 1921, the import of Austrian notes was also prohibited. It is now permitted for the payment of accounts in Bulgaria, Rumania, and the States of Succession.

At the beginning of 1920 the circulation of Austrian bank notes had reached the sum of 12,101,243,370 crowns. During 1920 this increased by 18,544,414,720 crowns.

Before the war, on June 30, 1914, it was only 2,325,145,670 crowns for the whole of Austria-Hungary. The average increase throughout 1920 was about 1,500,000,000 crowns a month.

During April the exchange value of the crown remained steady at the rate of about 200 to the dollar, and in May the crown rose to an exchange value of 150 to the dollar. At the end of December, 1920, the exchange rate was 660 crowns to the dollar.

NEW REGULATION OF THE TRADE WITH FOREIGN EXCHANGE—NATIONALIZATION OF THE BRANCHES OF THE BANKS OF THE FORMER MONARCHY IN THE NEW NATIONAL STATES.

[From the Economist, London, Dec. 4, 1920.]

The former Austrian Devisenzentrale—a State institution—has been transformed into a new private association of banks and bankers which is destined to regulate the trade in foreign exchange. It will be its duty to deliver the foreign exchange needed for industrial purposes, to prevent speculation in foreign exchange by private persons, and to establish a clearing office for foreign exchange. Supervision by the Government will be insured by means of a State commissary.

The branches of the great financial institutions of the old monarchy, which are situated now on the territory of the new National States, partly have become independent and partly have been joined with national banks or financial institutions of these National States. In the last few weeks the branches of the Mercurbank, which are situated on Czechoslovakian territory, have been changed into a new bank. Together with certain financial groups the Bohemian Commercial Bank has been established with 50,000,000 Czechoslovakian crowns capital, paid up. In Poland the branches of this bank have been transformed into the "Commercial Bank Share-Holding Company at Krakow." This new Polish bank will have a capital paid up of 20,000,000 Polish marks.

The financial and economic situation of Austria to-day may be best described as a state of expectancy. Some days after the president of the reparation commission left Vienna the liquidators of the Austro-Hungarian Bank, with the general secretary of the liquidation commission, Mr. Barry, departed for Paris; also Mr. Rapp, the general secretary of the Austro-Hungarian Bank has departed for Amsterdam. Information about the conference at the high council is not to be had.

THE PROBLEM OF EXCHANGE IN AUSTRIA.

[From the Commercial and Financial Chronicle, New York, Apr. 10, 1920.]

The New York Evening Post of April 3 published the following special correspondence from Geneva, Switzerland, under date of March 15:

"It has for months been no secret to well-informed people that the Ministry of Finance in Vienna granted licenses for the sale abroad of Austrian industrial securities only on condition that part of the foreign exchange realized in this way by the seller should be handed over to the Government in exchange for treasury bills. In this way the Austrian Ministry carefully accumulated a quantity of French and Italian currency and began to sell its holdings when French and Italian rates rose sharply in Switzerland in the second week of February.

"The result of this was that the Austrian crown rose within a fortnight from 1.50 to 2.60 Swiss centimes, and even after the end of the operation was stabilized at 2.40 centimes. For people in countries with good money it seems very unimportant whether the Austrian crown has a value of $1\frac{1}{2}$ or $2\frac{1}{2}$ per cent; both seem worthless. But one must not forget that there is practically no import into Austria from countries with undepreciated money. The bulk of the Austrian imports made by private merchants come from Italy, Germany, Czechoslovakia, and other countries which also have depreciated money. Before the Austrian Government's exchange operations in Switzerland started, 30 German marks were worth 100 Austrian crowns; but after the 'intervention,' 100 crowns brought 40 marks. The value of an Italian lira sank from 20 to 13 Austrian crowns and the value of the Czech crown from 4 to 2.8 Austrian crowns.

"This means for the Vienna buyer a considerable reduction of prices for German, Czech, and Italian goods, and Vienna's commerce with Italy, Germany, and Czechoslovakia is of more importance than her whole import from the west of Europe. Should the Austrian Government abuse the rise of her money in Geneva for purchasing Swiss goods, the artificially created rate would collapse like a house of cards. But the Swiss quotation, of no significance whatever as a hallmark for the purpose of commerce with Switzerland, has become in many European countries an aim of financial policy for which it is worth while making sacrifices."

NEW PAPER CURRENCY FOR VIENNA.

[From the Journal of Commerce, New York, May 7, 1920.]

VIENNA, *May 6*.—Decision to issue a new series of bank notes in denominations of 1,000 and 10,000 crowns to take the place of notes, the stamps on which are found to have been forged, has been reached by the Government. These notes have interfered seriously with business, and several suits have been instituted against the Austro-Hungarian Bank, which will pay but 80 per cent of the face value of this currency. Paper valued at several millions of crowns has been condemned as worthless.

GOLD AND SILVER COINS SCARCE.

[From the Journal of Commerce, New York, May 17, 1920.]

VIENNA, *April 26*.—There is hardly a silver or gold coin to be had in Vienna, owing to hoarding.

In an effort to bring them back into circulation the Government is paying 23 paper crowns for each silver crown and 35 in paper for each one of gold.

An illustration of the barter basis on which Austria now finds itself, as far as internal trade is concerned, was given at a meeting this week of the representatives of the peasants' associations, together with agrarian members of the assembly. When reproached for not allowing food to come to Vienna, they offered to collect the surplus food supplies in the hands of the peasants through their own agencies and deliver it to the Central Government in exchange for agricultural implements and such articles as they stand in need of. They refused to consider payment in Austrian money.

PRICE OF GOLD AND SILVER COINS.

[From the bullion letter of Samuel Montagu & Co., London, Mar. 11, 1920.]

The mint at Vienna has fixed the price of gold and silver as follows: Gold, 120,000 paper kronen, silver 5,500, the kilo fine (32.15 fine ounces). A silver krone (par value \$0.2026) is valued at 23 paper kronen, and a gold 20-kronen piece (par value \$4.0524) at 720 paper kronen.

BELGIUM.

The amount of 5-franc pieces withdrawn from monetary use during 1920 was 4,000,000 francs (\$772,000).

Quantity of gold and silver produced in 1920.¹

Source of production.	Gold.			Silver.

RETIREMENT OF GERMAN MARKS—THE BANQUE NATIONALE.

[Consul General Henry H. Morgan, Brussels, July 22, 1920, in Supplement to Commerce Reports, Dec. 4, 1920.]

During occupation the Germans put into circulation 6,100,000,000 marks and compelled the Belgians to accept them at the forced rate of 1 mark for 1.25 francs. The problem of retiring this flood of marks from circulation was accomplished only partially through the monetary restoration bonds, 1,700,000,000 of the 3,000,000,000 francs raised being used for this purpose. To complete the replacement, 5,800,000,000 francs were put at the disposal of the Government by the Banque Nationale, the Government to repay only the principal and the actual charges of printing and issuing. Before the end of the year steps had been taken to repay part of this obligation by floating an internal loan for 2,500,000,000 francs, of which 1,000,000,000 francs were to be turned over at once to the Banque Nationale.

Eventual redemption of these marks at 1.25 francs each is assured by an agreement between Belgium and Germany whereby the latter agrees to convert 5,500,000,000 marks into 40 treasury bonds of the German Republic, bearing interest at 5 per cent from May, 1921, and redeemable in blocks of 50,000,000 up to the time of maturity in 1939.

Total bills in circulation (Banque Nationale de Belgique) at the end of 1919 amounted to 4,785,915,724 francs with a gold reserve of 266,000,000 francs, as compared with a prewar circulation (paper money) of 1,034,616,120 francs and gold reserve of 280,000,000 francs.

BULGARIA.

No statistics are available as to the quantity of gold and silver used in the industrial arts, as the melting of coin for such use is prohibited by law.

Stock of gold and silver coin, also paper money, used for monetary purposes on Dec. 31, 1920.

Gold is at premium; 250 paper leva purchases 20 gold leva. Highest premium, 280; lowest premium, 146; average premium, 208.81.

No gold and silver have been exported during the year ended December 31, 1920. The circulation of foreign currency is now free in Bulgaria.

EXCHANGE FLUCTUATIONS.

[Consul Graham H. Kemper, Sofia, Nov. 1, 1920, in Supplement to Commerce Reports, Dec. 13, 1920.]

When the year 1919 opened, Bulgarian currency had already depreciated by more than 50 per cent. At the beginning of the year the exchange value of the lev, whose normal value is 19.3 cents, had fallen to about 9 cents, which level it maintained for more than three months. In April the lev began to drop and continued its downward course until at the end of December it was worth only about 2 cents. Among the causes contributing to this depreciation were the great increase in the fiduciary circulation, the unfavorable balance of trade, the decrease in the gold reserve, and the uncertainty as to what the future held in store. The National Bank found it necessary continually to advance funds to the Government to make up the deficiencies in the budget, which were constantly becoming greater owing to the depreciation of the currency. The fall of the lev in terms of foreign exchange had a serious effect upon foreign trade, producing a feeling of uncertainty and unrest in financial and commercial circles, and a consequent unwillingness to engage in commercial or industrial ventures where a sudden fluctuation in the exchanges might produce disastrous results.

CZECHOSLOVAKIA.

There has not been executed any coinage up to the present at the mint of Czechoslovakia at Kremnice, as it is not in working order.

The value as per December 31, 1920, of gold is approximately 50,000 Czecho-Slovak crowns per fine kilo and of silver 1,500 crowns per fine kilo.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1920, was: Domestic gold coin, 800 fine kilos valued at 40,000,000 Czecho-Slovak crowns (\$521,680); domestic silver coin, 9,800 fine kilos valued at 14,700,000 Czecho-Slovak crowns (\$321,182).

The amount of gold and silver returned from use in the industrial arts to monetary use during the year ended December 31, 1920, was: Gold, 272 fine kilos valued at 13,600,000 Czecho-Slovak crowns (\$180,771); silver, 7,000 fine kilos valued at 10,500,000 Czecho-Slovak crown (\$229,416).

No gold in any form passed the customhouses of Czechoslovakia in 1920.

Production of gold and silver during the year ended Dec. 31, 1920.

¹ Conversion rate, \$1.0194 per ounce.

² Conversion rate, 1 Czecho-Slovak crown=\$.013292 (50,000 crowns per kilo fine gold).

There is no premium on gold, as the Government notes issued are not founded on gold.

The monetary unit, Czecho-Slovak crown, being a pure State money, the stocks of gold and silver held by the State bank are not designated to create a covering for the issued State notes. That monetary unit and the State bank are only of a provisional character and those funds shall be the original stocks for the future issuing bank and the future definitive monetary unit.

CURRENCY.

[Consul C. S. Winans, Prague, in Commerce Reports, July 14, 1921.]

One of the first problems to confront the new Republic of Czechoslovakia was the provision of a separate currency, as the only currency in circulation within the new Republic was that issued by Austria-Hungary. The Government began by stamp-

ing all the bank notes issued by Austria-Hungary with the arms of Czechoslovakia, and at the same time took over all branches of the Bank of Austria-Hungary on Czechoslovak territory. These bank notes were intended to be temporary only and were soon replaced by notes issued by the Government of Czechoslovakia itself, so that by June 20, 1920, the last Austrian note bearing the Czecho-Slovak stamp was permanently withdrawn from circulation.

BANK DEPARTMENT—PROPERTY AND INCOME TAXES.

The next step was the creation of a new bank department, under the direction of the Ministry of Finance. Parliament passed an act April 8, 1920, imposing a tax upon property and incomes.

MONEY IN CIRCULATION—RESUMPTION OF GOLD CURRENCY.

The act also limits the amount of paper money in circulation and provides for its increase only when backed by commercial bills and securities discounted by the bank department. The report of the bank department for February 7, 1921, shows the total value of bank notes in circulation to be 10,806,066,004 crowns, or about \$154,372,271.

Voluntary gifts for the creation of a Czecho-Slovak metal fund have been made in gold, silver, and jewels to the amount of 20,000,000 crowns; and a loan to the State netted a total of 100,000,000 crowns in gold, or \$20,325,203. The final adoption of a gold currency is dependent upon stabilization in economic conditions and in a better equilibrium between the values of exports and imports.

PAPER MONEY ENGRAVED IN THE UNITED STATES OF AMERICA—METAL CURRENCY.

Bank notes in the denomination of 100, 1,000, and 5,000 Czecho-Slovak crowns, printed in the United States, are now in circulation in Czechoslovakia. Gold and silver money, as well as the currency of foreign nations, can not be taken out of the country without the special permission of the Department of Finance.

The small coin in use in Czechoslovakia is still that of the old Austrian and Hungarian issues.

The Government is now working on designs for Czecho-Slovak coins to take their place, and hopes to be able to withdraw the old issues during the present year. The first coin of Czecho-Slovak make was struck January 1, 1921, at the State mint in Kremnice. It is planned to strike new coins in denominations of 20 hellers, 50 hellers, and 1 crown. The metal used will be a mixture of 80 per cent copper and 20 per cent nickel. Tests for the new metal currency have been successfully met, and the minting of coins is about to begin.

SEPARATION OF CZECHO-SLOVAK FROM AUSTRO-HUNGARIAN CURRENCY.

[Assistant Trade Commissioner Donald L. Breed, Prague, in Commerce Reports, Dec. 27, 1920.]

Among war debts particular importance is to be attached to those inherited from Austria-Hungary in the shape of the bank notes issued by the Austro-Hungarian Bank. The Czecho-Slovak Republic was the first of the States created after the dismemberment of Austria-Hungary to adopt the expedient of stamping the notes which circulated within its territory, exchanging them gradually for a new national paper currency. In this way Czechoslovakia anticipated the system afterwards adopted by the Peace Conference. Furthermore, by taking advantage of a favorable psychological moment, the Government retired more than 2 milliards of the Austro-Hungarian bank notes, stamping only one-half of the notes which were in circulation and retaining the other half as a forced Government loan.

Following upon this separation of the Czecho-Slovak currency from that of the other parts of Austria-Hungary, a so-called "bank office" was created in the Ministry of Finance, to serve as a bank of emission. Although it possesses, in some respects, the character of a national bank, this office is an autonomous institution, administered by an independent committee. It has the duty of rigorously enforcing a law which forbids the "bank office" to extend any credits whatsoever to the State, either directly or indirectly. As a matter of fact, in spite of all the difficulties of the after-war periods the "bank office" has succeeded in keeping the fiduciary circulation within the limits prescribed by the law, and to satisfy the pressing demands for circulating medium special issues have been guaranteed by commercial paper.

The date fixed by the law of February 28, 1920, until which the National Bank can by royal resolution be released from its obligation to redeem with gold the legal-tender notes issued by the bank, is postponed until the end of February, 1921.

ESTHONIA.

Stock of Government notes used for monetary purposes on Dec. 31, 1920.

Location.	Esthonian marks.	United States dollars. ¹
In Government treasuries.....		
In Banks.....	100,000,000	572,000
In circulation.....	300,000,000	1,716,000
	1,700,000,000	9,724,000
Total used for monetary purposes.....	2,100,000,000	12,012,000

¹ Conversion rate: 1 Esthonian mark=\$0.00572 at the 1920 average exchange value 90 Esthonian marks=1 Russian gold ruble=\$0.5146.

Premium on gold: Highest, 110 Esthonian marks=1 Russian gold ruble; lowest, 65; average, 90.

The import of Russian gold rubles, not including transit shipments during the year ended December 31, 1920, was 15,000,000 (\$7,719,000).

NOTE.—This is the Bolshevik payment by virtue of the treaty of peace.

The export of Russian gold rubles, not including transit shipments to Great Britain during the year ended December 31, 1920, was 5,000,000 (\$2,573,000).

EXCHANGE AND CURRENCY.

[Consul Charles H. Albrecht, Reval, in Commerce Reports, July 23, 1921.]

The Esthonian mark, intended to have the same value as the franc but which it never attained, fell steadily in exchange value during 1920, as well as in local purchasing power. Reference has already been made to the attempts to arrest the course of exchange by import and export restrictions and by restrictions on the purchase of foreign valuta, as well as their failure, and the subsequent modification of restrictions in the direction of greater freedom of trade toward the end of 1920 and beginning of 1921.

At the beginning of 1920 an American dollar would buy about 100 Esthonian marks, although the legal rate was less. By the end of the year 375 Esthonian marks were obtainable for the dollar, and the rate of exchange for other foreign currencies was in proportion. This depreciation and fluctuation had a depressing effect on trade, particularly in articles that could be dispensed with and which came from countries whose currency had not depreciated.

FINLAND.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1920, was: Gold, 515 fine kilos (16,557 ounces), valued at \$342,269; silver, 4,116 fine kilos (132,329 ounces), valued at \$134,896.

No gold or silver of any description were returned to monetary use during 1920.

Approximate stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1920.

Character of stock.	In banks.	In circulation.	Total used for monetary purposes.

¹ Of which 13,691,423 Finnish marks (\$2,642,445) is foreign coin.

² Obviously melted down for the most part.

The actual currency is paper money.

Premium on gold: Highest, 894.2 per cent; lowest, 235.9 per cent; average, 465.1 per cent. These percentages have been calculated on the basis of the official exchange quotations for drafts on New York.

RAPID DECLINE IN FINNISH EXCHANGE—CAUSES OF DEPRECIATION.

[Consul Leslie A. Davis, Helsingfors, July 10, 1920, in Supplement to Commerce Reports, Nov. 11, 1920.]

During the second half of the year (1919) there was a remarkable drop in Finnish exchange. The normal value of the Finnish mark is \$0.193 (5.18 marks to the dollar, or 25.88 to the pound sterling), and during the first six months of the year the rate varied between 8.85 and 11.70 to the dollar, but after that it began to rise rapidly until at one time in December it was as high as 34, and on December 31 it stood at 32.80 to the dollar, or 125 to the pound sterling. The most rapid rise was in November, when it rose from 21.70 to 30.50 to the dollar.

This enormous rise of the foreign-exchange rate was due primarily to the adverse balance of trade.

Political reasons have also contributed to the fall in Finnish exchange, as has uncertainty as to the permanence of peaceful conditions here and fear of the influence of revolutionary Russia.

Another cause is the inflated value of Finnish money, due to the excessive issue of notes during the war.

MEASURES TAKEN TO IMPROVE THE EXCHANGE—FUTURE UNCERTAIN.

Business men and private bankers attributed the rapid decline of Finnish exchange to the restrictions in regard to trade. They succeeded in having them removed in November, after which the exchange declined more rapidly than ever. The Government maintained that this was due to the removal of the restrictions and restored them in even greater force than before. Toward the end of 1919 new laws for the regulation of foreign-exchange trade were issued, the object of which was to employ all foreign assets for imports of actual necessities and to restrict the buying of foreign money with Finnish marks.

The immediate effect of these measures was to improve the value of Finnish currency abroad. There has recently, however, been another marked decline in the exchange.

Exporters at the end of July decided to make all quotations in foreign currency, with the result that very few contracts were concluded.

FRANCE TO WITHDRAW FROM THE LATIN MONETARY UNION.

[From the Commercial and Financial Chronicle, New York, Feb. 28, 1920.]

A cablegram (Havas) from Paris February 24 to the New York Evening Post said: "France gave notice yesterday at a meeting of representatives of member nations of the Latin Monetary Union that from December 23 next she will not consider valid the monetary convention of December 23, 1865. By this compact France, Italy, Belgium, and Switzerland agreed to the use of the same coinage, so that their metal money might be mutually interchangeable. The reason given in the notice was that French silver coins are no longer current in the other countries concerned."

MODIFICATION OF LATIN MONETARY UNION.

[From the Commercial and Financial Chronicle, New York, Aug. 7, 1920.]

On July 31, the New York Evening Post printed the following special correspondence from Paris, June 24:

"A modification of the Latin Union has been signed by France and Switzerland (Mar. 15, 1920), and has been presented for ratification to the Belgian Parliament. This is the present situation. France, Belgium, Greece, Italy, and Switzerland, by the monetary convention of November 6, 1885, united on a common metal standard, weight, diameter, and currency, for their gold and silver coins. This constituted what is called the Latin Union.

"By a first modification, November 15, 1903, and a second, November 4, 1908, the small coins of Italy and Greece were 'temporarily nationalized;' that is, their circulation was limited to the country of issue. This covered coins of 2 francs, 1 franc and 50 centimes which had been gravitating into France to the great inconvenience of Italy and Greece.

"The new modification extends this nationalization to France and Switzerland, for which the consent of the other countries is necessary. In fact, the difference in money exchange between the two countries has had for one result a veritable exodus of French silver money into Switzerland. This, with hoarding at home and the speculative and illicit melting up of coins to sell at a higher price as metal, has brought about the present dearth of small change in France."

MONETARY PACT OF LATIN UNION.

[From New York Journal of Commerce, July 2, 1920.]

Terms of the monetary convention of the Latin Union, which was established in 1885 and the revision of which has recently been accomplished by conferences at Berne at which rather sweeping changes suggested by the Swiss delegation were voted down, are summarized by the British Minister to Switzerland in a report to the board of trade as follows:

ARTICLE 1. The French and Swiss Governments shall each withdraw from circulation on their respective territories all silver coins of the other country of the values of 2 francs, 1 franc, 50 centimes and 20 centimes.

ART. 2. Such coins are to be no longer received in public payment when three months have elapsed from the entry into force of the convention.

ART. 3. The coins so withdrawn from circulation are to be put at the disposal of the State of their origin.

ART. 4. Switzerland is to be given the right of increasing the contingent of small silver coin per head of its population from 16 to 28 francs.

ART. 5. Switzerland may reserve the quantity of French coin she judges indispensable for her own needs from the amount by which the French coin in Switzerland exceeds the amount of Swiss coin in France; she must notify France within four months of the entry into force of the convention of the amount of small French coin so reserved. Switzerland may centralize the coin so reserved and use it as a guarantee for an equivalent amount of 2 franc, 1 franc, and 50 centime notes, which she is entitled to issue on it. Unless arrangements to the contrary are made in the meanwhile, all French coin reserved by Switzerland is to be placed at the disposal of the French Government four years after the entry into force of the convention.

ART. 6. Switzerland may utilize, if she wishes, for any minting of small silver coinage necessary to raise her contingent per head of population from 16 to 28 francs, either 5-franc pieces issued by any State party to the Union, or small French silver coinage reserved by Switzerland, as above described.

ART. 7. Any profit resulting from the reminting of such coin is to be placed to the reserve funds of the Union; the cost of printing the small notes of 2 francs, 1 franc, and 50 centimes, above described, is, on the other hand, to be chargeable to these reserve funds. (It is to be remarked that the reminting of small silver coins would cause a slight loss, while the reminting of crown pieces would result in a slight gain, owing to the relative difference in the purity of the two.)

ART. 8. Switzerland is to inform France of the quantities of coin eventually reminted. For such excess of French money as France immediately receives from Switzerland, France undertakes to repay Switzerland, as also for such centralized French money as Switzerland may return her at the end of four years. Repayment may be effected at France's choice either in crowns of the Latin Union, preferably Swiss, or in gold coin of 10 francs and upward, or in bills on Switzerland.

ART. 9. Each Government is to bear the cost of collecting and restoring the coin of the other Government.

ART. 11. So long as each country refuses to accept the coin of the other in public payment, each country may also interdict the importation of the other's coin.

ART. 14. The Governments of the contracting countries agree to take measures to prevent the clandestine melting-up of coin emanating from countries belonging to the union.

The convention also contains a clause (art. 13) empowering the Belgian Government to issue certain coins for exclusive use in the Congo.

¹ Paper marks of far less value than gold marks.

In the memorandum of the German Government prepared for the Brussels conference in 1920 it was estimated that about 20,000,000,000 paper marks were held abroad (\$4,764,000,000).

Generally speaking, the market price for gold in Germany during 1920 was governed by the price on the London gold market.

The actual currency consists of paper marks whose actual value fluctuates greatly and is far below the value of gold marks.

LAWS AFFECTING THE CURRENCY.

By the decree of April 19, 1920, the 5, 3, 1, and $\frac{1}{2}$ mark pieces, as well as the 2 mark pieces struck in the form of medals, are to be withdrawn the day following the publication of this decree, and will be received in payment as well as exchanged for Reichsbank and government notes at the Imperial and State treasuries.

PRICE OF GOLD.

[From bullion letter of Samuel Montagu & Co., London, Feb. 26, 1920.]

When we remember that the mint value of gold before the war was 1,395 German marks the fine kilo, the statement of the *Neue Züricher Zeitung* that gold has changed hands in Germany at the rate of 67,000 marks the fine kilo is a powerful illustration of the financial collapse of that country.

Gold reserve of the Reichsbank.

Reichsbank—Metallic stock and note circulation.

[Economist Consul Maurice Parmelee, Berlin, in Commerce Reports, June 11, 1921.]

Items.	End of 1919.	End of 1920.
	<i>Marks.</i>	<i>Marks.</i>
Gold reserve.....	1,089,499,000	1,091,636,000
Reichskassen and Darlehnskassen notes.....	11,025,257,000	23,416,674,000
Silver reserve (paper marks).....		11,500,000,000
Reichsbank notes in circulation.....	35,698,369,000	68,805,008,000

¹ The Reichsbank silver holdings Dec. 31, 1920, per the London Economist, consisted of 5,856,000 marks, while one year previous the total was 21,040,000 marks. One gold mark=\$0.2382.

The gold reserve of the Reichsbank, which consists of German gold coins, gold in bars, and foreign gold coins, is reckoned in terms of gold marks at the rate of 2,784 marks per kilo fine gold. The gold reserve increased during 1920 to the extent of 2,137,000 gold marks. The reserve of Reichskassen and Darlehnskassen notes in the Reichsbank increased during 1920 to the extent of 12,391,417,000 marks, due largely to the issue of over 30 billion marks of Reichsbank notes, for which this reserve serves partly as a cover.

GERMAN CURRENCY CIRCULATION.

[Economist Consul Maurice Parmelee, Berlin, in Commerce Reports, Mar. 19, 1921.]

Over 99 per cent of the paper money in circulation in Germany consists of Darlehnskassen and of Reichsbank notes. The following figures, derived from the statements of the Reichsbank, indicate the circulation of Darlehnskassen and Reichsbank notes at the close of the years 1919 and 1920:

Circulation.

Items.	Dec. 31, 1919.	Dec. 31, 1920.
	<i>Marks.</i>	<i>Marks.</i>
Reichsbank notes.....	35,698,400,000	68,805,000,000
Darlehnskassen notes.....	13,781,200,000	12,033,300,000
Total.....	49,479,600,000	80,838,300,000

This paper money is in circulation in the sense that it is outside of the Reichsbank. It is impossible to ascertain how much of this money is in reserve in other banks or hoarded by individuals. Furthermore, * * * it is impossible to ascertain how much paper money has left Germany and is now in foreign countries, in spite of the efforts of the Government to retain its currency within the country.

In addition to the Darlehnskassen and Reichsbank notes in circulation there were in circulation about 313,000,000 marks of Reichskassen notes and 200,000,000 to 220,000,000 marks of notes issued by the other banks of issue, namely, the banks of Bavaria, Saxony, Wuerttemberg, and Baden. There were no coins of the precious metals in circulation and the value of the coins of baser metals in circulation is negligible.

The Darlehnskassen notes held in reserve in the Reichsbank partly for the purpose of covering the issue of Reichsbank notes amounted at the close of the year 1920 to about 23,369,674,000 marks. In addition, there were held in reserve on the Reichsbank about 47,000,000 marks of Reichskassen notes and 1,624,000 marks of notes of other banks of issue. Consequently, the total amount of German paper money in existence at the close of the year 1920 was about 105,000,000,000 marks.

The Federal Government is responsible for the redemption of the Darlehnskassen and Reichskassen notes. The Reichsbank is responsible for the redemption of its own notes, and the other banks of issue are responsible for the redemption of their notes.

GERMAN CURRENCY HELD ABROAD.

[Commercial Attaché Norman L. Anderson, Copenhagen, July 3, in Commerce Reports, Aug. 9, 1920.]

One of the heaviest drags on the recovery of the German mark is the enormous amount of German currency held by foreigners. Of the 64,000,000,000 marks in circulation about 20,000,000,000 are outside Germany. In Denmark alone there is supposed to be upward of 1,500,000,000 in mark notes.

Imports into and exports from Germany of gold and silver coins during the year ended Dec. 31, 1920.

MOVEMENT OF GERMAN SILVER.

[From bullion letter of Samuel Montagu & Co., London, June 17, 1920.]

The mystery as to what has happened to the 65,500,000 silver marks (about 10,000,000 ounces) which were withdrawn recently from the Reichsbank reserve is cleared up partially by the following information which has reached us: The German Government have recently shipped 60,000 kilograms of silver (about 2,000,000 ounces) to Holland, which had been deposited with the Netherlands bank, but not yet sold. A further quantity of 15,000,000 marks' worth of silver (about 2,400,000 ounces) was lodged with a Dutch colonial bank, having been shipped by private banks from Germany, and was destined to serve for repayment of debt in gold marks. The colonial bank in question endeavored to ship 4,000,000 florins' worth of this silver to New York, but the high export duty of 10 per cent was demanded by the Netherlands Government, and prevented the transaction from taking place.

It is understood that the duty has been fixed at this high rate to prevent the export of melted-down Dutch currency.

On the other hand, large quantities of Belgian silver are said to have been smuggled into the country, melted down, and exported as bullion.

DEMONITIZATION OF SILVER COINS.

[From *Moniteur des Interets Materials*, Brussels, Jan. 25, 1920.]

The German Government is planning to demonetize its silver coins in the near future. This measure will bring the Government the cash it so urgently needs, and will prevent the export of the said coins. The Reichsbank is in charge of the execution of this order, and the buying prices are fixed as follows: A 1-mark piece brings 6.50 marks; a 2-mark piece, 13 marks; a 3-mark piece, 19.50 marks; a 5-mark piece, 32.50 marks; a 5-pfennig piece, 3.25 marks; the 20-pfennig piece, 1.30 marks; the old 1-thaler piece brings 21.50 marks, based upon the maximum amount of silver contained.

NOTE.—Saml. Montagu & Co.'s circular of May 13, 1920, states that silver in Germany has been demonetized.

MINTAGE OF BASE METAL.

[From Montagu letter, Nov. 4, 1920.]

The mintage of base metal, other than copper or nickel, still prevails in Germany. Up to the end of August 53,300,000 marks of aluminum coins had been minted. Other coins minted up to the same date were iron coins, 71,800,000 marks, and zinc, 56,800,000 marks; so that in all about 181,200,000 marks of these coins of small denomination have been struck.

PORCELAIN TOKENS ISSUED IN GERMANY.

[From the Numismatist, October, 1920.]

Illustrations have appeared in the press in this country of the new porcelain tokens or coins issued for the German Government by the Meissen porcelain factory of the State. These are in denominations of 10, 20, and 50 pfennigs, and 1, 2, 3, and 5 marks. The illustrations show that each denomination has a different design—one the head of an eagle, another a flaming torch, another a sheaf of wheat, and others with devices difficult to describe from the illustrations. The reverses are all similar—a square containing "Deutsches Reich" and the denomination, with a spear of wheat on each side and above the square, and an ornament beneath it.

Notwithstanding that illustrations of the tokens have been published, a recent press dispatch from Berlin says that the proposal to manufacture them has been abandoned. The dispatch is as follows:

"The proposal to manufacture porcelain coin to the amount of 60,000,000 marks for the German Republic has been abandoned. Some already had been produced at the Meissen manufactory and were disks of terra-cotta color, unglazed and unmilled, but of faultless artistic imprint. Experts of the Reichsbank, however, advised the Government against their adoption, mainly on the ground that they would be unweildy in the pocket or purse, could not be easily distinguished by touch, and could not be counted with existing counting machinery. One of the most important points raised in opposition to their use was that they might be imitated without particular difficulty except for a degree of hardness which could only be ascertained by tests by experts in porcelain."

The Meissen porcelain factory has already made 300,000 20-pfennig porcelain tokens for the Hamburg Elevated Railroad, and they are now in use.

GIBRALTAR.

The colonial treasury in Gibraltar does not keep a supply either of gold or silver, and depends entirely on local banks for its requirements. No gold is in circulation and silver is scarce. Sterling is the legal currency in the Colony. British treasury notes, local notes, and Spanish notes and silver are all in use.

Up to the end of November the quotation for gold was nominal at 77s. 9d. per standard ounce. During December there was a free market and the lowest quotation during the month was 104s. per fine ounce, the highest quotation 111s. 3d. per fine ounce, while the average for the month was 108s. 7d. per fine ounce.

LAWS AFFECTING THE CURRENCY.

By the coinage (Ceylon) order, 1919, 550 shall be substituted for 800 as the millesimal fineness of Ceylon 50-cent, 25-cent, and 10-cent pieces coined after such date as may be fixed by the Governor of the colony by proclamation; 5 shall be substituted for 3 as the corresponding remedy allowance for those coins.

By treasury order of May 8, 1919, the order of March 25, 1919, fixing a maximum price for silver bullion sold in the United Kingdom, is revoked.

THE POUND STERLING.

[From the London Chronicle, in the Numismatist, May, 1920.]

The suggested debasement of our silver coinage is a reminder that at one time the sovereign was worth exactly a Tower pound of silver; hence the term "pound sterling." That was in the time of William I, but progressive debasement of the sovereign by successive monarchs so lowered the silver value of the coin that ultimately it required 3.3 sovereigns to purchase a Troy pound of silver, and the difference between a Tower pound and a Troy pound is only a fraction of an ounce.

Originally, too, 240 silver pennies were the equivalent of a pound, and that explains the "pennyweight," which is the 240th of a Troy pound. We still keep the terms "pound sterling," and "pennyweight," but the sovereign is no longer worth a pound of silver, and the pennyweight has no connection with the weight of a penny.

SILVER EMBARGO REPORTED REMOVED.

[From the Commercial and Financial Chronicle, New York, Feb. 14, 1920.]

The "Wall Street Journal" of last night, February 13, reported that, according to advices in local banking quarters, Great Britain has lifted the embargo on silver shipments to India. This, it is stated, is expected to relieve the silver export movement from here.

GOLD AND SILVER EMBARGO.

[From Federal Reserve Bulletin, March, 1921.]

During the war gold exports were not prohibited in England, but gold did not move out of the country, except by Government action, as the result of transportation difficulties and risks and of patriotic restraint. On March 28, 1919, an order in council was issued under section 1 of the customs (exportation prohibition) act, 1915, absolutely prohibiting the export of gold coin or bullion to any destination. Toward the end of July, 1919, however, an arrangement was made by which new gold, after being shipped to the London market, might be exported under license. No change in this arrangement is made by the new law. On December 23, 1920, the gold and silver (export control) act, 1920, was passed, which prohibits by law the exportation of gold and silver coin and bullion.

THE SILVER COINAGE BILL.

[From the Mining Journal, London, Feb. 21, 1920.]

The Government bill for reducing the fineness of silver coinage in the British currency system passed its second reading on Wednesday. The chancellor of the exchequer, in supporting the measure, said that the bill was designed to lower the fineness of the Imperial silver coinage current in the United Kingdom and certain British Possessions where this currency circulated, from 0.925 fine to 0.500 fine. The necessity for the change was the increased price of silver bullion, due to reduced output and increased demand. Silver in 1914 was worth 28 d. per ounce, and was now over 80 d. He did not think this immense rise would be long retained, but thought it very unlikely that we should get back to anything like the prewar level for a long time to come. With the existing penalties on export and melting of silver coinage, a premium was offered for the commission of offences so long as the price of silver is above 66 d. per ounce. Silver coins now were not token money. The Government proposed to restore the token character of the silver coinage. With a fineness of 0.500, the melting point of the new coin would be slightly over 122 d. per ounce with silver at 88 d. per ounce. With silver at 46 d. per ounce, the intrinsic value of the new coin would be higher than that of the old coin up to 1914. Our silver coinage had never been anything but token money since 1816. As regards our coinage in the self-governing dominions, an amendment providing for the necessity of a request from the local government before making the provisions of the bill applicable to them would be inserted. There was some criticism of the continued issue of 3-penny bits. He himself would be glad to do away with them, but there was a big public demand for them which they could not ignore. The increase in wages and the spending power called for an increase in the silver currency, and there was an increased demand for small coin, owing to the small split sums which had to be paid owing to the insurance act. Both the paper pound and silver coins were equally tokens in relation to the gold pound. Silver coinage was legal tender only up to 40 s., and that was equally applicable to the new silver coinage. It was asked why they did not issue small notes. He had got a large stock of 5 s. notes and smaller notes printed, but, as a result of inquiries, there was a unanimous reply from employers and workpeople that they did not want paper notes for small values. He found more objection to the existing £1 and 10 s. notes than he had anticipated, but in any case there was no doubt about the opposition to the smaller denomination. If they forebore to issue either paper or silver money, they would reproduce the conditions of the Napoleonic wars, when shortage of currency obliged firms and individuals to issue local tokens, which had a value extending just as far as the issuer's credit was known. If he were to be called upon to issue silver coinage at a loss, not only was there temptation offered to break the law, but fresh taxation must be levied to cover the loss. The fact that the amount of credit in existence and its relation to commodities. If they checked the demand for currency in one form they must get it in another, and if they refused to coin silver they would probably have the situation which existed at the beginning of the war, when owing to a succession of bank holidays currency did not return to the banks, and consequently people could not get change for £5-notes.

NEW SILVER COINAGE.

[From the Economist, London, Dec. 18, 1920.]

Last February, when the price of silver had risen to 88 d. per ounce, the Chancellor of the Exchequer passed through Parliament a bill to permit a reduction of the fineness of the silver coins to be minted in future. The objects of the bill were officially explained as follows: "It is proposed by the bill to reduce the fineness of the silver in the coins hereafter minted from 0.925 to 0.500 fine; with silver at 88 d., the intrinsic value of 1-shilling piece 0.500 fine will still be considerably more than the intrinsic value of a 1-shilling piece 0.925 fine in July, 1914." The first installment of the new silver coins has been issued this week, and as successive issues pass into circulation the old silver coins will be withdrawn. The carrying out of this policy is not affected by the fall in the price of silver to below 40 d., which has since occurred

[From the bullion letter of Samuel Montagu & Co., Dec. 9, 1920.]

It is stated that the new silver currency of the United Kingdom (500 instead of 925 parts fine in the 1,000, the authorized quality since the reign of Queen Elizabeth) will shortly be available for issue. This is the most radical change in our currency since the establishment of the gold standard, though of course far less important as to its effect upon this country and upon the world at large. Its influence, however, will permeate abroad, for it is a clear indication that, in the opinion of this country, the intrinsic value of subsidiary coinage is not of vital consequence so long as the material used is suitable. The employment of precious metal for the purpose is a mere survival of bimetallism, which has been abandoned by every country in the world.

[From Bankers Magazine, London, January, 1921.]

New silver coins conforming to the standard of fineness laid down in the coinage Act, 1920, namely, 50 per cent fine, were put into circulation on December 13, and it is intended that the old silver coins, thirty-seven fortieths fine, shall gradually be withdrawn as they are displaced by the new coins. The coinage act of 1920 seemed a necessary and desirable measure at the time of its passing, for with standard silver at 89 d. per ounce silver could only be coined at a loss, and there was a direct incentive to melt down coins from circulation, although, of course, this was made punishable by severe penalties. In the light of after events, however, the wisdom of proceeding to make the coinage act effective seems distinctly open to doubt. With silver in the neighborhood of 40 d. per standard ounce there is a sufficient margin of profit in coining an ounce of silver into 66 d. of silver money, and there is of course no longer any temptation to hoard silver coins or melt them down as bullion. On the other hand, coins of only 50 per cent fineness are intrinsically worth only about 4 d. in the shilling with silver at 40 d. per ounce, so that the illicit manufacture of coins of practically the same fineness is almost a profitable industry, and, of course, such forgeries are very much harder to detect than the ordinary products of the coiner's art, made from pewter and similar alloys. In the days of low-priced silver before the war, silver coins not much below the ordinary standard of fineness sometimes made their appearance, and if silver goes much lower in price this device seems likely to recur.

[From the Mining Journal, London, Dec. 18, 1920.]

In answer to questions in the House of Commons, Mr. Chamberlain, in the course of a written reply, stated: The silver circulation of the United Kingdom is estimated at about £60,000,000. Coins of the new fineness to the amount of about £5,000,000 have already been prepared, and additional £2,000,000 will probably be ready in the next three months. Some coins of the new fineness are already in circulation, and issues of the other denominations will be made gradually through the banks, an approximately similar amount of the old coin being drawn in through the banks. In due course the older coinage will be demonetized, but this will not be for some years to come.

COMPOSITION OF THE NEW COINS.

[From Bankers' Magazine, London, February, 1921.]

There has been some criticism of the new silver coinage, on account of its tendency to become rather yellowish in color after being in circulation for a short time, and it appears that this is probably due to the high percentage of copper in the alloy. The mint makes no secret of the composition of the coins, which is 500 parts silver, 400 parts copper, and 100 parts nickel. In some quarters the coinage has been described as a nickel one, but the proportion of nickel, it will be seen, is only 10 per cent.

GREECE.

The quantity of gold and silver used in the industrial arts during the year ended December 31, 1919, was as follows: Gold, 100 kilograms fine (3,215 ounces) valued at \$66,460; silver, 200 kilograms fine (6,430 ounces) valued at \$7,207.

NICKEL COINAGE EXECUTED AT THE PARIS MINT IN 1920.

[From Bulletin de Statistique, Paris, February 1921.]

The nickel coinage executed at Paris in 1920 consisted of 5,573,766 pieces valued at 586,195 drachmas (\$113,136).

FRENCH, BELGIAN, AND SWISS COINS NO LONGER ACCEPTED.

[From the bullion letter of Samuel Montagu & Co. London, Feb. 5, 1920.]

The following announcements have been made with regard to subsidiary silver coinage: After January 14, French, Belgian, and Swiss coins will cease to be accepted as currency in Greece. Greek coins of 1 drachma and 2 drachmas will be withdrawn from circulation.

CIRCULATION OF FOREIGN SILVER COINAGE PROHIBITED.

[From the bullion letter of Samuel Montagu & Co., London, Mar. 11, 1920.]

It is reported that the circulation of non-Greek silver coins in Greece has been forbidden as from January 14. Hitherto, all coins under the value of 5 francs of the Latin Monetary Union and Switzerland were legal tender (as well as 5 franc pieces). The note circulation on December 28, 1920, amounted to \$291,044,000 (according to London Economist, Feb. 12, 1921).

EXCHANGE SITUATION—CONTROL OF EXCHANGE TRANSACTIONS.

[Consul General Alexander W. Weddell, Athens, Aug. 31, 1920, in Supplement to Commerce Reports, Nov. 30, 1920.]

During 1914 and 1918 the drachma remained at par, or 5.1813 drachmas to the dollar; in 1919 parity was maintained for the first 6 months of the year, but the average for the 12 months was 5.51 drachmas to the dollar.

During the war three elements, among others, gave the Greek drachma a strong position on the changes of the world—the presence of large Allied armies, with the consequent expenditures of large sums for local and immediate needs, the earnings of the Greek merchant marine (in great part under requisition to Allied Governments), and the sums sent into Greece by Greeks residing in the United States. Against these favorable elements in the exchange situation must be noted the inability in 1919 to realize credits held in certain countries, the depletion in some measure through the rush to buy articles of luxury in America and Europe, of which the country had been long deprived, the restrictions on exchange transactions imposed by the Government, which latter induced many holders of foreign exchange to retain their capital abroad for trading purposes, etc. The general result of these unfavorable elements was to gradually impair the strong position held by the drachma, which toward the end of 1919 began to show evidences of weakness in comparison to the dollar, with which it had been successfully maintained theretofore. The full effect of this, however, was not seen until the early spring of 1920.

Under the basic law of 1910 French exchange was taken as the par of the Greek exchange. When the French franc began to depreciate the dollar became the basis. As stated, during practically the whole of 1919 the Greek drachma not only maintained itself at par with the dollar but was at a premium as compared with most other European moneys, Spain and Switzerland being exceptions.

By the agreement between the United States, Great Britain, France, and Greece, of February 10, 1918, the Greek Government, in consideration of the \$150,000,000 advance to be made by the three powers, obligated itself to immediately take steps looking to the limiting and control of sales of foreign exchange to legitimate needs and on production of justifying documents. Even before that time, however, the financial authorities of the Government had taken steps, by the decree of November 20, 1917, to control foreign exchange. This act was followed at various times by the promulgation of other laws and regulations having the same general purpose.

This control was exercised with a gradual tendency toward its stricter application as the drachma began to weaken, and the effect of this was particularly felt in trade between the United States and Greece. Toward the close of the year the restriction became so severe that complaint was made by merchants of their inability to purchase dollar exchange to meet their bare needs. It may be stated that exchange rates played but an inconsiderable part in trade relations between Greece and the United States in 1919, but that governmental exchange restrictions, applied with the general plan, as suggested above, of maintaining the parity of the drachma (based on the dollar), had a tendency to cut off purchases in the United States and to limit buying to bare necessities, despite the active and effective demand existing in this market during the period for American goods.

By a royal decree which took effect on the day of the signature of the treaty of peace with Turkey (St. Germain), July 29–August 11, the control of exchange in Greece was abolished, save that the prohibition of importation of bank or treasury notes in rubles, lei, Turkish pounds, leva, marks, and Austrian crowns remains in full force and effect.

HUNGARY.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1919, was as follows: Gold, 1,183 fine kilos (38,033 ounces); silver, 4,863 fine kilos (156,345 ounces).

During the year 1919 there was no legal traffic with gold coins. The bolshevik régime exchanged the 20-crown gold coins for 60 paper crowns. The premium on gold rose steadily. In December, 1919, the 20-crown gold coin was worth about 958–980 paper crowns.

The exportation of gold and silver was prohibited in 1919.

The coins of the late Austro-Hungarian monarchy nominally remained legal tender, no alterations by legal measures having been made; but practically all these coins are hoarded in private hands and out of circulation, with the exception of the 10 and 20 filler (heller) iron coins.

Approximate stock of gold and silver, also paper money, used for monetary purposes in December, 1919.

IMPORTANT CURRENCY AND FISCAL MEASURES OF HUNGARY.

[From Commerce Reports, Mar. 26, 1920.]

The following cablegram from the American mission at Budapest sets forth important currency and fiscal measures by the Hungarian Government:

"The Hungarian Government, in a decree issued March 18, orders the stamping of Austro-Hungarian bank notes circulating in Hungarian territory. This order is issued in conformity with a clause of draft of peace treaty and is effective with regard to all currency circulating in Hungary except the following: Notes of 1 and 2 crowns issued by Austro-Hungarian Bank; notes of 5, 10, and 20 crowns issued by Hungarian Postal Savings Bank; falsifications of 25 and 200 crowns notes of Austro-Hungarian Bank printed by Bolshevist Government; and certain old notes which have been recalled by the Austro-Hungarian Bank, some of which are still in circulation. Every person, firm, corporation, or society in Hungary is obliged to present for stamping, between March 18 and 27, inclusive, all Austro-Hungarian bank notes in his or its possession or custody regardless of whose property such currency may be. Notes to be stamped ceased to be legal tender on 18th, and on or after March 28 it will be unlawful to demand or offer such notes in payment of debts or contracted obligations or to deal in them.

"Fifty per cent of total of notes presented for stamping will be paid out in stamped Hungarian notes. For the remaining 50 per cent the owner is given nontransferable certificates, later to be converted into nonnegotiable State obligations bearing 4 per cent interest. The decree provides that bonds may be used instead of cash in the payment of certain debts to the State, but can not be used, as far as can be seen from the law, for the payment of ordinary taxes. The decree states that, in the event of a future capital tax, the bonds will be received in payment thereof at face value, conformable to their nonnegotiable character, only from the person to whom they are now issued.

"The decree further provides for a similar loan from owners of all forms of commercial bank accounts equal to 50 per cent of the amount which their accounts have increased between January 15 and March 18, 1920. Savings accounts are practically unaffected by the law.

¹ On Aug. 31, 1920.

² On Aug. 16, 1920.

"Prices, instead of falling on the theory of an increased value of the crown, have not decreased; many merchants are even increasing prices, pleading the necessity of recouping consequent losses. The lack of adequate preparation has caused confusion and the practical paralyzation of commerce in town and county."

BANK-NOTE CIRCULATION.

[Consul C. M. Hathaway, jr., American Mission, Budapest, in Commerce Reports, Feb. 10, 1921.]

In the statement of the Austro-Hungarian Bank of October 23, 1920, there appeared for the first time a statement of the bank-note circulation in Hungary. According to this statement, the amount in circulation was placed at 11,982,646,810 crowns. The amount of the Austrian stamped crowns in circulation on the same date was 24,175,351,787. Notwithstanding that the stamping in Austria took place 11 months before that in Hungary, still the disproportionately large amount of the Austrian bank notes in comparison to the Hungarian is striking, and is some measure of the rapid inflation of the Austrian currency.

The total amount of bank notes in circulation on October 23, 1920, was 72,046,665,607, made up of notes in circulation December 31, 1919, apart from those previously or afterwards stamped by Austria or Hungary, and amounting to 35,888,667,010 crowns; Austrian stamped crowns, 24,175,351,787; Hungarian stamped crowns, 11,982,646,810.

The 11,982,646,810 Hungarian stamped crowns naturally does not mean the exact debt of Hungary to the Note Bank. This gives only the amount of the Hungarian stamped notes in circulation. For the 35,888,667,010 crowns of the common issue; that is, those for which Austria and Hungary are jointly liable, according to the Bank Note Patent and the "Ausgleich" (law regulating the relations of Austria and Hungary in the old Austro-Hungarian monarchy), Hungary is responsible in accordance with the old rate (that is, Hungary is responsible for one-half), although Hungary had not drawn its share of the bank notes at the close of the war.

Up to the time of the breaking out of bolshevism, as well as after its fall, the amount of the crowns still unstamped was near the proper proportion, so that of the 26 billion common bank-note circulation Hungary's share was about 13 billion crowns.

According to the statement of November 7, the circulation of the bank notes in Hungary had decreased during the two weeks by 17 million crowns, while in Austria it had increased by 1,342,000,000. The amount of the Hungarian circulation is determined by the Hungarian Finance Ministry's record of notes officially stamped.

The statement of October 23 shows the Hungarian Government responsible to the bank for notes issued by the Soviet Government ("white money") to the amount of 832,051,748 crowns, which on November 7 had increased to 899,585,905 crowns.

NATIONAL BANK OF JUGOSLAVIA.

[Consul General Robert P. Skinner, London, England, Mar. 11, 1920.]

The Department of Overseas Trade has received from the British Minister at Belgrade the following translation of an agreement under which the National Bank of Serbia is transformed into the National Bank of the Kingdom of the Serbs, Croats, and Slovenes:

"One of the principal objects of the national bank is to regulate and strengthen the currency system of the country. The capital of the bank is to be 50,000,000 dinars [at normal exchange the dinar is equivalent to \$0.193] in gold, divided into 100,000 shares of 500 dinars each. The existing 20,000 fully paid bearer shares of the National Bank of Serbia, amounting to 10,000,000 dinars in gold, will be considered as fully paid-up shares of the new bank. Forty thousand shares, of the nominal amount of 20,000,000 dinars in gold, are to be issued in installments as soon as the law creating the bank comes into force. The new shares will be inscribed shares, and they may not be held by foreign subjects. The hitherto-existing shares to bearer of the old bank will be transformed into inscribed shares, irrespective of the nationality of the holders. Apparently no foreign subject will have the right to vote at the meetings of the bank.

"The national bank will have the sole right of issuing bank notes, which are declared legal tender for the whole country, and may put into circulation notes up to the value of three times the metal stock of the bank. Their convertibility is suspended by one of the provisional regulations. The national bank will also put into circulation the new bank notes which are to replace the kronen notes of the Austro-Hungarian Bank, as well as those replacing the silver notes of the old Serbian National Bank. It will take over from the Ministry of Finance the temporary bank notes which are now being issued by the State for the purpose of replacing the kronen notes, and will exchange them within a period of three years for its own permanent bank notes.

FACILITIES OFFERED BY NEW BANK—DIVIDENDS.

"Among the facilities given by the bank to the State are: (a) The discounting of Treasury bonds up to the amount of 150,000,000 dinars at the rate of interest of 2 per cent per annum; (b) the State may borrow from the bank a sum in bank notes not exceeding 600,000,000 dinars without paying any remuneration to the bank, but against certain securities; (c) for the purpose of reconstruction of the new Kingdom the national bank will open an extraordinary credit in favor of the Ministry of Finance to the extent of 500,000,000 dinars against Treasury bonds. No interest is to be paid to the bank for this credit. Bank notes issued in the execution of these facilities will not be counted among the notes which the bank is entitled to issue on its own account. The same exception applies to the notes issued in exchange for the kronen notes.

"Of the net profits of the bank, half is to belong to the State and the other half is to be utilized for the payment of dividends. These dividends may not be more than 10 per cent of the value of the net assets of the bank, but if they fail to pay 6 per cent on the paid-up capital the deficit up to 6 per cent is to be completed from the half of the profits reverting to the State. The dividends of the bank are to be paid in gold, but during the period of suspension of specie payment the dividends will be paid in bank notes of the national bank with a premium calculated on the rate of exchange of American dollars, limited to 20 dinars equal \$1 (present exchange is 33 dinars to the dollar).

"It may be noted that the bearer shares of the old national bank must be presented for amortization [sic] within five years and one month. Paragraph 1 of the agreement specifies that it is to come into force on February 1, 1920."

THE NEW JUGOSLAV PAPER CURRENCY.

[From Commerce Reports, Apr. 30, 1920.]

It was reported recently that the 1,000-crown notes, a left-over from the old Austrian Empire, would be withdrawn from circulation in Serbia and Montenegro by March 5 of this year and from other parts of Yugoslavia by the 15th, while the 100-crown notes would be withdrawn by April 15. The old Serbian dinar currency is to be replaced by new dinar-cum-crown notes. In fact, the 1,000-dinar or 4,000-crown notes have been in circulation for some weeks. This is the first note above 100 dinars to circulate in Serbia. This and the 100-dinar note are both of French manufacture, but not the 10-dinar (40-crown) note. This last is described as being less artistic than the French-made notes, and to be overcrowded and of so deep a blue in color that it is difficult to read the inscription.

FOREIGN BILLS AND CURRENCIES.

[From Bankers' Magazine, London, January, 1921.]

The Finance Minister has issued a decree relating to the trade in foreign bills and currencies, practically accepting all the demands of the banking and commercial world, as expressed at the Belgrade Conference at the end of July. According to the "*Neue Zürcher Zeitung*," the central office for foreign bills is abolished; the dinar becomes the general legal tender and foreigners are required to change their own currencies for dinar at the National Bank or its branches, or at various privileged banks. One-third of the foreign bills forthcoming are taken over at their original value by the State for purchases abroad and other purposes, the other two-thirds remaining at the disposal of legitimate import trade. The following are regarded as "sound currencies": The French franc, the lira, the pound sterling, the dollar, the drachma, and the Dutch florin. Legitimate importers are registered business firms who can show a certificate of the Chamber of Commerce as to the extent of their business, and a statement by the taxation authorities that they have punctually paid their taxes. Such firms will give foreign currencies to the value of 200,000 francs (French) monthly; they will, however, have to prove within the three months following that the import has taken place, or they will be fined. Except the National Bank, the privileged banks may only keep in their safes foreign currencies and bills up to the value of their paid-up capital, otherwise they will be prosecuted for hoarding and speculation in exchange. The banks may open no credits for foreigners, and may not take foreign securities as surety for loans.

THE STAMPING OF THE PAPER CURRENCY.

[From Commerce Reports, Apr. 21, 1920.]

Information from Belgrade is to the effect that the stamping of the Austrian crown in circulation has been completed. It is expected that redemption will be made at the rate of 4 crowns to the dinar, unless it should be made at par. The smuggling of Austrian, Hungarian, and other valueless money has been prohibited, and the Jugo-Slav Government is said to know the number of marked crowns to be redeemed. Precautions have been taken to insure against fraud at the various Jugo-Slav legations in the exchange money. For the present Greek and Bulgarian nickel money of 5, 10, and 20 centimes circulate freely. The new notes to be issued will probably not be Government paper, but paper of a privileged bank.

CHANGE IN CURRENCY—INFLUX OF AMERICAN MONEY.

[Consul Alfred R. Thomson, Zagreb, Mar. 25, 1921, in Commerce Reports, June 2, 1921.]

The year 1920 witnessed the partial transition of the currency from Austrian crowns to Serbian dinars. The Serbian dinar was legally decreed to be equal to four Jugo-Slav crowns. All currency was so stamped. Practically all Austro-Hungarian imperial paper money was gradually called in before the close of the year. Nevertheless, local merchants continue to quote prices in crowns.

The principal financial asset * * * during the year 1920 was the great influx of American money remitted to the local population by Croats and Slavonians residing in the United States. It is estimated that such remittances amounted to nearly \$55,000,000 during 1920.

LATVIA.

No gold or silver was used in the industrial arts during the year 1920.

The amount of gold returned from use in the industrial arts to monetary use during the year ended December 31, 1920, was 1,000,000 gold francs (\$193,000), which forms the "gold reserve" which the country is building up.

There is probably \$800 in United States gold coin in Latvia, but owing to depreciated value of gold as against paper everybody is anxious to get rid of gold.

Total Government notes used for monetary purposes: 1,641,385,430 Latvian rubles (\$844,656,942).

The Latvian ruble is now only a paper issue backed by the flax and timber of the country, and has greatly depreciated in value.

Due to governmental prohibition of the export of gold, the gold dollar as compared with the paper dollar is about 6 per cent depreciated.

The amount of gold coin imported from Soviet Russia during the year ended December 31, 1920, was 4,000,000 Czar rubles (\$2,058,400).

NEW AND OLD CURRENCIES.

[From Supplement to Commerce Reports, Dec. 30, 1920.]

Czar rubles remain the basis of all financial negotiations in Latvia. Up to a short while ago there was only a sufficient amount to satisfy the popular demand. Duma rubles, Kerensky rubles, Lenin money, and Riga Bolshevik money were all soon discredited. There was an insufficient number of Ost rubles and Ost marks, which were issued by the Ost Bank for trade and industry in Posen and guaranteed by the German Government at the rate of one Ost ruble to two Reichs marks. New currency was procured when the Government of Latvia issued paper money at the fixed rate of 1.50 Czar rubles to one Lettish ruble. As the Czar ruble, however, constantly fell in value in comparison with the Ost ruble, the Government hoped to improve the rate of exchange of the Lettish ruble and fixed a new rate of exchange by which two Czar rubles equaled one Lettish ruble. The Lettish ruble, however, fell in the market to a value of 1.35 Czar rubles. Thus one could purchase in the open market 1.35 Czar rubles for one Lettish ruble, while all shops were forced to sell their goods at the official rates. Prices in Czar rubles greatly increased and everybody who had only Czar money was obliged to pay the new prices, while their incomes remained the same. The army and the Government officials were paid in Lettish rubles; it was the middle classes that held the Czar rubles and felt the hardships involved in the fixed rate of exchange. Many small shops have been forced to close. The fixed rate of exchange for Lettish money is still in force, but the Lettish ruble in the open market has continued to fall. About 111,000,000 Lettish rubles are said to have been printed. Eight million, equal in value to Government money, were printed by the city of Riga, which was granted the right to issue this money because it needed to buy wood. But it was compelled to pay for the wood in Czar rubles because the sellers demanded them despite the Government ordinance that all sellers must accept Lettish money.

The Latvian ministry of finance proposed to the Cabinet in the spring of 1920 a currency reform by which Latvian money alone would be permitted in circulation in Latvia. According to this plan, all Latvian contracts must be closed in Latvian currency, except such as were made with foreign countries. The proposed unit was 1 latt=100 groschen, and 1 kilo of pure gold=6,828 latts. The following coins were planned: Gold, 25 and 50 latts; silver, 1, 2, 5, and 10 latts; bronze, 10, 20, and 50 groschen; and new paper money as follows: 1, 5, 10, 25, 50, and 100 rubles (i. e., latts), and 5, 10, 25, and 50 kopecks (i. e., groschen).

The treasury notes, under this scheme, might continue in circulation for the present and would be guaranteed by the Government's gold reserve and property. New treasury notes would be issued only in such amounts as had previously been determined in connection with the currency reform. At least 150,000,000 rubles of the treasury notes issued must be withdrawn and paid off within five years—such withdrawal to be accomplished by timber sales to the amount of 30,000,000 rubles a year. Up to one-fifth of the gold reserve might also be employed to pay off treasury notes. It was planned to circulate the requisite amount of small coins and to coin gold and silver money to replace the remaining treasury notes. Such agreements as were made in Russian and German valuta were shortly to be transformed into Latvian valuta.

PROPOSED CURRENCY REFORM.

[Commissioner John A. Gade, Riga, Mar. 9, 1920, in Commerce Reports, Apr. 28, 1920.]

The Latvian Ministry of Finance has proposed to the Cabinet a currency reform by which Latvian money alone will be permitted in circulation in Latvia. All Latvian contracts must be closed in Latvian currency, except such as are made with foreign countries. The new unit will be 1 latt=100 groschen, and 1 kilo of pure gold=6,828 latts. The following coins will be issued: Gold, 25 and 50 latts; silver, 1, 2, 5, and 10 latts; bronze, 10, 20, and 50 groschen. The present treasury notes may continue in circulation for the present and will be guaranteed by the Government's gold reserve and property.

The following new paper money will be issued: 1, 5, 10, 25, 50, and 100 rubles (i. e., latts), and 5, 10, 25, and 50 kopecks (i. e., groschen).

New treasury notes will merely be issued in such amounts as have previously been determined by the currency reform. At least 150,000,000 rubles of the treasury notes issued must be withdrawn and paid off within five years, this to be accomplished by the timber sales to the amount of 30,000,000 rubles a year. Up to one-fifth of the gold reserve may also be employed to pay off treasury notes.

The requisite amount of small coins will be circulated, and gold and silver money coined to replace the remaining treasury notes.

Such agreements as were made in Russian and German valuta will shortly be transformed into Latvian and also payments on them.

CURRENCY—GOLD STOCK.

[American Consulate, Riga, Apr. 12, 1921.]

The currency of this country is paper, which paper was backed by timber and flax of the country. Over these two products the Government established a monopoly and found for them a market, principally in England. The flax suffered a very appreciable drop in value and the English merchants were quite unable to dispose of their holdings of Latvian timber. As a result the Latvian ruble depreciated very materially and suffered within the past year a change in value from 60 to 360 to the dollar. The Government endeavored to form a "gold reserve" and succeeded in obtaining gold to the value of 1,000,000 gold francs. As a result of the peace negotiation with the Bolsheviks they have obtained 4,000,000 gold rubles. With this fund they hope, with the assistance of foreign capital, to establish an emission bank, payments of which would be on the basis of the gold franc. They hope in time to be able, probably through the medium of an internal loan, to retire the paper currency presently in existence.

LITHUANIA.

CURRENCY.

[Consul John P. Hurley, Riga, June 2, 1921.]

There is no gold and silver stock in Lithuania. The Government notes in circulation amount to 900,000,000 ost rubles.

The currency of the country is the ost mark, which is backed by Germany and consequently fluctuates with German exchange. Lithuania has never made any attempt to put into circulation a currency of its own and in this respect is much better situated than Latvia, Esthonia, or Poland, in which countries the currency is very much depreciated. It is highly probable that, while the Lithuanian Government desires to institute a currency of its own, it will not do so for quite some time to come. The experience of the countries mentioned above will act as a very efficient deterrent.

ESTABLISHMENT OF THE LITHUANIAN NATIONAL BANK.

[Consul General Robert P. Skinner, London, Feb. 16, in Commerce Reports, Mar. 19, 1920.]

A financial deal in connection with British trade in the Baltic States, and perhaps later with European Russia, has been closed in London during the short visit, just terminated, of Ernest Galvanauskas, prime minister of the de facto government of Lithuania. M. Galvanauskas came to London on a mission embracing both economic and political problems, and in an interview has detailed the steps already taken, and still to be negotiated, in getting the infant State on its feet.

Briefly, the British Government has formally approved a plan whereby Lithuania places its entire financial and commercial future in the hands of a large and influential London banking group, which will be completed by similar arrangements with Esthonia and Lettland just about to be concluded.

The scheme will be carried out on the following general lines: The British group, including several of the largest banks, will first advance the sum of £3,000,000 and found the Lithuanian National Bank. This institution will have two departments one for general banking and the promotion of business and the other for the issue of new currency. The first issue will be the equivalent of the sterling reserve. Further issues will follow, but the initial flotation is considered adequate at least until the 800,000,000 German marks now in circulation are retired. Whereas the mark in Lithuania is now depreciated, as in Germany, the new currency in auksinas, the equivalent of the shilling, is expected automatically to maintain itself at par through the operation of the rest of the plan, which embraces a balance of exports and imports sufficient to keep exchange stabilized.

It is understood that this financial and commercial agreement has been concluded for a period of 15 years.

There is a delegation representing the British group now in Kovno, the temporary capital, going over the ground preparatory to starting the national bank. It is believed that the scheme will be put into operation just as soon as the Lithuanian Constituent Assembly elections are held, the second week in April.

FINANCIAL SITUATION OF LITHUANIA.

[Commissioner J. A. Gade, Riga, Russia, Mar. 31, 1920, from Supplement to Commerce Reports, Sept. 23, 1920.]

The report of the Lithuanian Government on the financial situation has not yet been received. According to Russian official statistics for 1913, in the Governments of Kovno, Vilna, and Suvalki the fiscal incomes amounted to 55,750,000 rubles and the ordinary expenditures to 59,350,000 rubles, giving a deficit of 3,600,000 rubles. Extraordinary expenses amounted in that year to 3,600,000 rubles, giving a total deficit of 7,200,000 rubles.

The legal tender of the country is the ost mark, which was introduced by Germany in 1915 soon after it occupied Lithuania. The ost mark is freely exchanged at the same values as the reichsmark and no difference is made in any respect between the two currencies. A British report gives the following figures regarding the ost mark:

The total amount issued was about 1,250,000,000 marks, which, however, was not confined to Lithuania but circulated throughout the occupied regions of Russia. The amount now in circulation in Lithuania proper is estimated at about 800,000,000 marks. In addition to this currency there is probably a total of 200,000,000 reichsmarks in circulation.

BANKING INSTITUTIONS.

The same report gives further the following information on banking in Lithuania before the war:

At the end of 1913, for the Governments of Luvalki, Grodno, Vilna, and Kovno there were 461 State and 803 private banking institutions, representing a total capital of 27,800,000 rubles. Their deposits totaled 144,000,000 rubles in round figures; bills discounted annually, 32,300,000 rubles; net profits, 4,000,000 rubles; and total balance, 407,000,000 rubles.

At present there is practically no banking in Lithuania. The operations of the Lithuanian Bank of Trade and Industry are limited practically to remitting money.

The Lithuanian Bank of Husbandry at Kovno has an authorized stock capital of 2,000,000 marks, of which on January 1, 1920, about one-half was paid up. The manager and chief shareholder formerly owned a small banking office at Petrograd. The object of the bank is to finance agriculture and industry. At present its operations are limited to changing money.

NORGES BANK SUSPENDS GOLD PAYMENTS.

[From Commerce Reports, Apr. 1, 1920.]

The following is a paraphrase of a cablegram received from Christiania, Norway:

"Norges Bank suspended, under royal decree of March 19, 1920, payments of gold specie. It is, however, provided that, within the discretion of the bank, sales may be made for industrial purposes at bullion value. Announcement is made that the measure was made necessary by the constant shrinkage of gold reserve, there having disappeared an approximate amount of 20,000,000 crowns as a result. presumably, of speculations."

POLAND.

Poland mints no gold nor silver coin. With the exception of a negligible number of iron coins, viz, 1, 5, and 10 Pf., which have remained from the German occupation, the medium of exchange consists entirely of paper money without any predetermined value or rate at which it may be redeemed. While the Government has established a small reserve of gold and silver, this reserve is relatively insignificant when compared with the amount of paper money in circulation.

Stock of gold and silver coin in the "Polska Krajowa Kasa Pożyczkowa" (Polish State Loan Bank) and paper money in circulation on Dec. 31, 1920.

Silver coin.....	37,566,464	8,948,332
Total.....	49,984,582	11,906,328
Notes in circulation.....	Polish marks. 49,000,000,000	¹ 11,671,800,000

¹ The Polish mark has no fixed value; converted as of the value of the German mark.

BANK NOTES IN CIRCULATION—GOLD AND SILVER.

[Trade Commissioner Louis E. Van Norman, Warsaw, Feb. 11, 1921, in Commerce Reports, Mar. 29, 1921.]

On November 11, 1918, when the Polish State Loan Bank (P. K. K. P.) passed from the Germans to the Poles, it had bank notes in circulation to the amount of 880,150,000 marks. On December 31, 1919, these had risen to 5,267,041,000 marks; on March 31, 1920, the total was 10,692,926,000 marks; on July 31, 26,311,387,000 marks; on November 30, 43,236,181,000 marks; on December 31, 49,361,485,439 marks; and on January 31, 1921, 55,079,451,609 marks.

According to official figures, the amount of gold, silver, and discounted bills in the possession of the P. K. K. P. (measured by the standard of the German mark at par) was as follows: On December 31, 1919, gold valued at 6,620,000 marks; silver at 25,467,000 marks; discounted bills at 3,883,000 marks. On August 31, 1920, gold valued at 9,045,000 marks; silver at 33,815,000 marks; discounted bills at 465,790,000 marks; On November 30, 1920, gold valued at 10,151,000 marks; silver at 35,380,000 marks; and discounted bills at 396,028,000 marks.

According to statute, the P. K. K. P. is permitted to supply the State with loans from its own operations in addition to the emission of bank notes. Regulations sanctioned by the Diet on November 26, 1920, allow the debt of the State to the P. K. K. P. to aggregate approximately 65,000,000 marks. As soon as conditions become somewhat normal the institution will issue notes only in accordance with the commercial requirements of the country.

POLISH FINANCES.

[From Moniteur des Intérêts Matériels, Brussels, Mar. 13, 1920.]

The Minister of Finance has laid before the House a bill whereby the State shall buy the gold and silver coins in circulation, as well as the bullion in the country. Gold shall be paid at the rate of 12,000 Polish marks per kilo (32.15 ozs.); silver at the rate of 400 marks. The buying price of coins shall be: 10 German marks=43 Polish marks;

10 rubles=92.88 marks; 10 francs=34.80 marks; 10 crowns=36.57 marks; 5 German silver marks=10 Polish marks; 5 rubles=7.20 marks; 5 francs=9 marks; 5 crowns=3.34 marks.

The paper circulation at the present time is 5,631 millions of Polish marks, or about 450 millions of (Belgian) francs.

REORGANIZATION OF CURRENCY.

[From the Journal of Commerce, New York, Apr. 20, 1920.]

WARSAW, April 18 (by the Associated Press).—Poland was shut off from the world to-day. All the frontiers have been closed for ten days by Government order while Austrian crowns are exchanged and stamped. To prevent crowns from being brought to Poland by speculators during the exchange period railroad traffic to and from other countries has been suspended, the transport of commodities has been forbidden and all post, telegraphic, and telephonic communication has been suspended in the case of private individuals.

When the process is completed marks and crowns will be of the same value. Heretofore the crown has been worth 30 pfennig more than the Polish mark.

THE NEW CURRENCY SYSTEM.

[From the Numismatist, May, 1920.]

No definite monetary laws have been enacted in the new States of Poland. There are several projects now under consideration. In the former Austrian territory of Galicia, Austrian currency is still used.

Hitherto the monetary circulation of Poland has consisted of five different kinds of currency—German marks, Austrian kronen, Russian rubles, Polish marks issued during the German occupation, and Lithuanian rubles issued by the Germans during the occupation of Lithuania. Such a state of affairs is naturally a bar to business. The Polish Government has long been considering plans to reform the monetary system. At the beginning of this year (1920) the Polish "zloty," equivalent to the French franc, is to be put into circulation. At the same time all the different currencies now in circulation will be withdrawn by means of an obligatory loan; that is to say, kronen, marks, and rubles presented up to a certain date will be exchanged at a definite rate to the extent of 30 per cent in Polish "zloty," and the remaining 70 per cent in bonds of the Polish State.

GOLD ACQUIRED FOR BASIS OF POLISH CURRENCY.

[Trade Commissioner Louis E. Van Norman, Warsaw, in Commerce Reports, Apr. 29, 1921.]

According to the terms of the Riga peace treaty, Russia and the Ukraine have agreed to pay to Poland 30 million rubles in gold coin and bullion not later than one year after the ratification of the treaty. In case the bolshevists do not return railroad material taken away from Poland during the invasion, they will pay an additional 29 million gold rubles.

The efforts of the Polish Government to collect gold metal as a reserve for currency continue. The Government itself collects gold in payment for spirits. In Galicia the sum thus received has already reached a total of 700 kilos, besides several thousand kilos of silver. It is stated also that the Polish Government has received from the liquidation of affairs of Poles in Siberia 115 kilos of gold.

Through the initiative of the Lemberg (Lwow) branch of the Women's National Organization, a movement was set on foot throughout the Republic for collecting gold and silver (whether coin, plate, or jewelry) to be used as a fund for Polish currency. In addition to the silver thus obtained, the women of Lemberg have collected nearly 100 kilos of gold.

It is announced that the amount of gold in the Polish State Loan Bank, held as a reserve for the future Polish monetary unit, now amounts to 52,000,000 marks.

LAWS AFFECTING THE CURRENCY.—LAW No. 1085.

[Extract from "December Report for Lisbon Consular District," Lisbon, Jan. 17, 1921.]

The Government is authorized to coin up to 2,000,000 escudos in bronze into coins of 5 centavos each. The weight of the new coin will be 8 grams and diameter 25 mm.

RUMANIA.**MONEY IN CIRCULATION.**

[From *L'Economiste Européen*, Nov. 5, 1920.]

Five kinds of money circulate in the Kingdom of Rumania, making a total of 9,500,000,000 lei (\$1,833,500,000); 4,525,000,000 lei (\$873,325,000) National Bank notes; 2,105,000,000 lei (\$406,265,000) General Bank notes; almost 4,000,000,000 crowns; that is, 2,000,000,000 lei (\$386,000,000); and 1,000,000,000 Romanoff and Lwoff rubles; that is, 1,000,000,000 lei (\$193,000,000).

This plurality of money and its abundance—the normal circulation ought not to exceed 4,000,000,000 lei (\$772,000,000) at most—harms the value of the leu in foreign markets, and has contributed to the terrible rise in the prices of goods in the domestic markets.

This situation has attracted the attention of all the ministers who succeeded each other since the armistice and each had as his program the unification of the fiduciary circulation by withdrawing the rubles, crowns, and General Bank notes, and also the reduction of the monetary inflation.

MONETARY STOCK AND NOTE CIRCULATION OF THE BANK OF RUMANIA.

[From Report of the Bank of Rumania, for Jan. 8, 1921.]

Character of stock.	Lei.	Equivalent in United States dollars.

GOLD STOCK HELD AT THE REICHSBANK.

[From the bullion letter of Samuel Montagu & Co., Jan. 13, 1921.]

Reuter states that, following upon a request by the National Bank of Rumania, the Reichsbank in Berlin has declared itself ready in accordance with the terms of an agreement to hold at the disposal of the former a deposit in gold standing to its credit. This deposit is stated to comprise 162,110,000 German marks, 952,000 Austrian crowns, and 2,765,000 French francs, the whole in gold.

CURRENCY.

[By Nicholas Petrescu, in The Bankers Magazine, New York, February, 1921.]

The depreciation of the leu has been determined not only by the adverse balance of trade, but also by extraordinary inflation. After the conclusion of hostilities there were in circulation, besides the emissions of the National Bank of Rumania, a considerable quantity of Austro-Hungarian crowns, Russian rubles, and notes issued by the "Banca Generala" during the German occupation of the country. Instead of unifying the monetary circulation, the Government has tolerated a chaotic currency system for nearly two years, during which new quantities of Austro-Hungarian and Russian paper money have been stealthfully introduced into the country. The retreat of crowns and rubles took place only in September, 1920, while the circulation of the notes issued by the Banca Generala is still being allowed. The elimination of crowns and rubles has burdened the public finances with ten billion lei, necessitating new emissions of paper and thereby increasing inflation * * *.

One of the latest and most important services rendered by the National Bank was the exchange of crowns and rubles in the Provinces regained from the former Austro-Hungarian and Russian Empires. The mechanism of this operation was excessively difficult on account of the great quantity of notes smuggled by speculators from Austria, Hungary, and Russia during the last two years. The crowns (of the Austro-Hungarian National Bank) were exchanged at the rate of 50 bani, and the rubles (Romanoff and Lwoff) at an average rate of 70 bani, a very favorable price compared with the actual value of these notes. The exchange of these foreign bank notes required about 10 billion lei.

The gold stock of the National Bank of Rumania amounts to 493,755,430 lei, of which a portion is still being held by the Soviet Government at Moscow * * *. We have information which allows us to hope that it is untouched * * *. The Rumanian Government will ask the immediate restitution of the gold stock as the first condition of peace with Russia.

LACK OF MONEY IN BESSARABIA.

[From Commerce Reports, Apr. 21, 1920.]

Bessarabia is reported as suffering from the low purchasing power of the ruble, which the Rumanian Government has thus far been unable to replace, owing to the lack of paper money. It is said, however, that a supply of paper money is expected shortly from the United States. This money will be issued by the Government instead of by the National Bank of Rumania, as the question of the extension of the issuing power of that institution to the new Rumanian possessions has not yet been settled. The policy of extension has been objected to, and the result may be the establishment of regional banks for Transylvania, the Bukowina, and Bessarabia. These new regional banks would bear the same relation to the Rumanian Government as the existing national bank.

RUSSIA.

GOLD PRODUCTION IN 1920.

[From Washington Star, June 12, 1921.]

The Izvestia of Moscow says that the Siberian gold fields, which before the war produced 108,000 pounds of gold annually, last year produced only 2,700 pounds.

The American consul at Goteborg, Sweden, Walter N. Sholes, reports the following figures for the gold production of Siberia:

Year.	Kilos.	Ounces.
1914.....	1,600	51,440
1917.....	6,300	202,545
1918.....	3,400	109,310
1920.....	1,200	38,580

GOLD PRODUCTION FROM URAL AND SIBERIAN MINES FROM 1913 TO 1917.

[Economist Consul Charles D. Westcott, Paris, Apr. 21, 1921.]

1913.....	\$40,432,000
1914.....	44,157,000
1915.....	32,660,000
1916.....	21,774,000
1918.....	10,886,861
1919.....	10,886,831

GOLD MINING IN RUSSIA.

[From The Mining Journal, London, Nov. 20, 1920.]

According to Ekon Zhisn, the production of gold in Soviet Russia in the first half of the current year was as follows: Lena district, 25,758 ozs.; Central Siberia, 4,818 ozs.; Western Siberia, 1,724 ozs.; Ural, 2,527 ozs.; total, 34,827 ozs. Mining is being carried on under the greatest difficulty, all efforts to get the works going again having been thwarted by the local authorities. Large quantities of gold are said to have been stolen, and owing to shortage of raw material the works are being utilized for other purposes. In 1919, 58 gold mines were in operation; in 1920 the number was reduced to four.

RUSSIA'S GOLD RESERVES ON VARIOUS DATES.

According to Journal of Commerce, New York, August 25, 1921:

At the outbreak of the war in 1914.....	\$779,750,000
By the end of 1917.....	635,000,000

According to Economist Consul Charles D. Westcott, Paris, April 21, 1921:

In July, 1914.....	\$823,714,500
On Jan. 1, 1920.....	474,524,839
On Apr. 30, 1921.....	228,637,259

NOTE CIRCULATION.

[From The Economist, London, Apr. 9, 1921.]

The circulation in November, 1917, when Lenin seized power, was under 19 milliard rubles. Official figures are available down to March 31, 1920, when circulation was:

	Rubles.
Tsar notes.....	21,796,000,000
Duma notes.....	40,356,000,000
Kerensky notes.....	46,768,000,000
Soviet notes.....	230,777,000,000
Total.....	339,697,000,000

After March, 1920, according to *Rabotchi Golos*, the printing presses were turning out 2½ milliards a day, but M. Festelberg's estimate is that in the six months ending October 1 last 300,000,000,000 rubles were printed, which would make the total to-day much more than that of the journal quoted.

The note issue under Bolsheviki's rule.

[By Arthur Raffalovich, in Bankers' Magazine, London, May, 1921.]

Notes issued under the Imperial Government:

	Millions of rubles.
Before the war.....	1,633
1914 (after July 19).....	1,314
1915.....	2,670
1916.....	3,487
1917 (January and February).....	846
Total.....	9,950

In 1918 there were put into circulation:

	Thousands of rubles.
Romanoff.....	4,479,641
Douma.....	15,275,027
Kerensky.....	9,396,108
Total.....	29,150,776

On January 1, 1919, there were:

	Millions of rubles.
Romanoff.....	14,880
Douma.....	21,615
Kerensky.....	18,118
Total.....	54,613

On January 1, 1920, we find in circulation:

	Millions of rubles.
Romanoff.....	21,668
Douma.....	39,494
Kerensky.....	46,559
Soviet.....	116,905
Total.....	224,626

Notes in circulation at the end of 1920 are estimated at 790 billions of rubles.

SOVIET RUSSIA TO ISSUE MONEY REDEEMABLE IN PLATINUM COINS.

[From New York Times, Feb. 29, 1920.]

LONDON, February 28.—The Russian Bolshevik Commissary of Finances, M. Krestinsky, has published a statement preliminary to the expected foreign trade, according to an exchange telegraph dispatch from Berlin. The Soviet Government, it says, will issue a new type of credit note in denominations of 50, 100, 500, and 5,000 rubles, backed by reserves of platinum of the value of 37,500,000 gold rubles. The issue will be limited to 65,000,000 rubles and the Government will be ready on call to convert them into platinum coins.

Platinum notes will be used in payment of foreign purchases made direct by the Government. To Russian citizens they will be paid out by the State only in exchange for commodities of practical value. Such citizens as deliver goods will then be allowed to trade directly with foreigners, using the notes as currency.

SPAIN.

The total imports of United States gold coin during the year ended December 31, 1919, was 152,731,000 pesetas (\$29,477,083).

Notes in circulation.....	834,966,000

NOTE CIRCULATION.

[From *Moniteur des Intérêts Matériels*, Oct. 24, 1920.]

A royal decree has just regulated the circulation of notes in Spain, as follows:

"The issue of notes by the Bank of Spain may rise to a total of 5 billion pesetas, to be guaranteed as follows:

"Up to 2 billions by the metallic reserve provided for in article 3 of the law of May 13, 1902, the total reserve to represent 46-50 per cent of the issue, of which 28-50 per cent must be in gold and 18 per cent in silver; from 2 to 5 billions by a metallic reserve of at least 70 per cent, of which at least 60 per cent must be in gold and 10 per cent in silver.

"The bank may not diminish its gold stock without authorization from the council of ministers; it must increase it as much as possible, in agreement with the minister of finance."

SPANISH JEWELERS MELTING UNITED STATES GOLD COINS.

[From the *Commercial and Financial Chronicle*, New York, July 10, 1920.]

The melting of American gold coins in Spain for the manufacture of jewelry is reported as follows in the daily papers in cablegrams from Madrid, July 6:

"Spanish goldsmiths and jewelers are gathering all the American gold coins they can get for the purpose of melting them for the manufacture of jewelry. As a result these pieces of money are rapidly disappearing from the market and going into the melting pot, as American coins contain more pure gold than those current in Europe, which are generally eighteen carats fine.

"Exchange officials who a few months ago displayed American coins in their windows are now declining to sell them and are offering paper dollars instead. Gold coins of other nations may still be obtained, but prewar rates are being charged."

SPAIN COUNTERMARKING FOREIGN GOLD COIN.

[From the *Numismatist*, September, 1920.]

In connection with the Spanish gold currency scheme, it is proposed that foreign gold coins should circulate provisionally after being stamped with their Spanish equivalents. This method of providing temporary currency has not been practiced for many years past in Spain or any other country. By impressing the Spanish value on the foreign gold the coin is disvalued for circulation in other countries. By limitation of the silver circulation (all superfluous silver coins are to be withdrawn) the false minting in Spain will be checked. To cope with the scarcity of paper money, the treasurer has granted a further issue of notes of 50 pesetas, but only against complete gold covering.

On July 10, 1919, the mint law of October 10, 1868, again came into force in Spain, according to which only gold is legal tender in that country, and the acceptance of payments in silver in 5-peseta pieces (except through the State bank) is limited. As long as there is not enough minted gold in the country, foreign gold will be circulated, but this has a special impression. It is intended to stabilize the Spanish rate of exchange by utilizing the gold of foreign coins accumulated during the war.

SPANISH EXCHANGE.

[From *Banker's Magazine*, London, December, 1920.]

According to the *Frankfurter Zeitung*, the Spanish exchange, which, during the war and especially immediately after the armistice, occupied a favorable position in its competition with that of Holland, Switzerland, and America, has been falling sharply for some time. The gold stocks of the Bank of Spain had accumulated to such an extent that the bank notes were fully covered, and the introduction of a gold currency seemed imminent. As a matter of fact, the Government paid its officials in gold, and for the import duties, which had to be paid in gold, notes were accepted at par. Now matters are quite different. The premium for the gold duties is about 30 per cent and the exchange rate of the peseta against the dollar is 30 per cent in favor of the latter.

SWEDEN.

Amount of gold and silver coin withdrawn from monetary use for recoinage during the year 1920.

Items.	Gold.	Silver.
Domestic coin.....	70 kroner (\$19).....	7,095 kroner (\$1,901).

NEW NICKEL COINS FOR SCANDINAVIA.

According to the "Numismatist" for October, 1920, at a meeting on the 28th of May, in Stockholm, Sweden, a proposition was accepted changing the coinage laws to permit the striking of 50 öre, 25 öre and 10 öre coins for Sweden, Norway and Denmark, in nickle instead of in silver.

GOLD COINAGE.

[From the Numismatist, February, 1920.]

New gold coins of 5, 10, and 20 crowns are being struck for Sweden.

At the coin congress held November, 1919, at Christiania, Norway, the delegates united to prepare between the northern countries a law regarding new subsidiary coinage, as well as the introduction of a nickel coinage.

BANKING LAW.

[From the Commercial and Financial Chronicle, New York, Mar. 20, 1920.]

Advices to the State Department at Washington report that both houses of the Swedish Parliament have passed a bill relieving the State Bank from the obligations to pay gold on Swedish paper currency.

SWITZERLAND.

On December 28, 1920, the Government decided to suppress temporarily the unlimited legal tender quality of the 5-franc pieces of the other countries of the Latin Monetary Union in order to stop the importation of such currency by smuggling. This drainage was to the disadvantage of all the countries concerned.

During the war a certain amount of 10 and 5 centimes pieces has been made of brass.

FEDERAL DECREES OF DECEMBER 28, 1920, CONCERNING THE WITHDRAWAL FROM CIRCULATION IN SWITZERLAND OF SILVER 5-FRANC PIECES OF THE LATIN CURRENCY UNION AND OF BELGIAN 2 FRANC, 1 FRANC, AND 50 CENTIME SILVER COINS, BOTH DECREES TO BECOME EFFECTIVE ON APRIL 1, 1921.

"ARTICLE 1. The silver 5-franc pieces of the Latin Monetary Union, with the exception of those bearing the Swiss effigy, are withdrawn from circulation. After March 31, 1921, the withdrawn 5-franc pieces are no longer accepted by public offices and have no legal rate in Switzerland.

"ART. 2. The Federal State Treasury will still accept foreign 5-franc pieces at their nominal value which may have remained in circulation even after the aforementioned date if unquestionable proof is furnished that they had been in Switzerland before the decree of October 4, 1920, prohibiting their importation, became effective.

"ART. 3. The 5-franc pieces which are withdrawn from circulation will be replaced, as far as needed, by bank notes of the Swiss National Bank. The Federal council reserves the right to put the withdrawn silver money into circulation again if circumstances appear to justify such a measure.

"ARTS. 1 and 3. The Belgian silver coins of 2 francs, 1 franc, and 50 centimes are withdrawn from circulation after March 31, 1921, and will be replaced by Swiss coins.

"ART 2. The Federal State Treasury will still accept at their nominal value Belgian silver coins if unquestionable proof is furnished that they had been in Switzerland before the decree of November 2, 1920, prohibiting their importation, became effective."

ASIA.

AFGHANISTAN.

ISSUE OF CURRENCY NOTES.

[Consul E. Verne Richardson, Karachi, India, July 6, 1920, in Commerce Reports, Aug. 27, 1920.]

The Associated Press in a telegram dated July 4 says that an official notification issued at Kabul states that with the object of advancing and extending trade and promoting the international exchange of Afghanistan the Amir has ordered the introduction of currency notes of the denominations of 1, 5, 25, 50, and 100 rupees. It is added the notes have been printed under supervision of Raza Beg Khan, the mathematician, and after the necessary tests have been stamped with specially made seals of Mirza Mahmud Khan, the Finance Minister, and Ghulam Haider Khan, General of Treasuries.

ARABIA—ADEN.

There is no mint at Aden and the coin required by the Aden treasury is supplied from India.

The amount of uncurrent silver coin remitted from the Aden treasury to the Bombay mint for recoinage in 1919 was 4,085 rupees (\$1,325).

Stock of gold and silver coin, also paper money, in the Government Treasury (excluding currency chests) on Dec. 31, 1919.

	Rupees.
Gold coin.....	2,835
Silver coin.....	113,702
Total gold and silver.....	116,537
United States equivalent.....	\$37,805
Government notes.....	207,650
United States equivalent.....	\$67,362

The remittances from India on Government account during the year ended December 31, 1919, were as follows: Gold coin, 750,000 rupees (\$243,300); silver coin, 250,000 rupees (\$81,100). The remittance of uncurrent silver coin to India on Government account amounted to 4,085 rupees (\$1,325).

BRITISH INDIA.

The silver coinage executed during the year ended December 31, 1920, consisted of 108,636,679 1-rupee coins, value \$35,241,739.

Silver coinage executed for other governments during the year ended Dec. 31, 1920.

¹ Includes 162,654,680 rupees held in the currency offices and chests as part of the paper currency reserve.

² Held in the currency offices and chests as part of the paper currency reserve.

³ Includes 571,268,652 rupees held in the currency offices and chests as part of the paper currency reserve.

⁴ Held at the head offices of the Presidency Banks of Calcutta, Bombay, and Madras. Figures for branch banks as well as those of other banks are not available.

⁵ The Government of India does not possess accurate information about the amount of gold and silver in circulation in India.

The restrictions on dealing in sovereigns were removed early in 1920. The sales of Government gold bullion were continued till the middle of September, there being altogether 18 sales during the year and over 6,800,000 fine ounces sold. With effect from June 21, 1920, the restrictions on the imports of gold bullion were removed and by ordinance III of the same date sovereigns ceased to be legal tender in payment or on account, but provision was made for their acceptance at Government treasuries at the rate of 15 rupees to the sovereign during a moratorium of 21 days. By the Indian coinage act (xxxvi of 1920) which received the assent of the Government of India on September 9, 1920, the legal tender character of the sovereign was restored and the ratio fixed at 10 rupees to the sovereign. The premium on gold continued throughout the year, though it was considerably reduced about the middle of the year. The highest and lowest quotations per fine ounce of country bar gold during 1920 were 79 and 54/5 respectively; the quotations of sovereigns at Bombay were 18/8 and 14/6 respectively.

By act No. xxx of 1920, the possession and import of rouble notes is prohibited. By act No. xlvii of 1920, an Imperial Bank of India is created, to which shall be transferred and in which shall vest the undertakings of each of the Presidency banks, and which may do Government business.

MOVEMENTS OF THE PRECIOUS METALS TO AND FROM INDIA.

[From the bullion letter of Samuel Montagu & Co., Jan. 20, 1921.]

The movements of the precious metals to and from India were of special importance during the Great War. They are still more significant now that currency throughout the world has been inflated to such an extremely large extent, and all embargo upon Indian bullion movements has ceased. The past attitude of India toward gold and silver has been, with little exception, one-sided. Returns generally have shown a net gain of imports. We append official figures:

India's absorption of precious metals.

(In thousands of pounds sterling.)

¹ Net exports.

The total net imports of treasure during these 55 years reached the formidable total of £671,560,000.

Against only two years—1915-16 and 1918-19—is there reported a net export, and that of gold only, not of gold and silver combined. Even this amount in one case is under, in the other not much more than, India's own production. In both instances the movement was owing to absolutely abnormal conditions created by the Great War.

The recent exports of gold and silver from India—which, like some vast lake, has been perennially supplied by tributary streams of gold and silver—should not, in our opinion, be considered an indication that the time-worn practice of assimilation of the precious metals is to be abandoned. Rather should the sporadic reverse movement be likened to the natural overflow which ensues when the surface of a lake temporarily overleaps its banks.

The amount of silver taken by India during the latter years of the war and immediately after was, owing to natural and special circumstances, of remarkable size. When in September, 1919, the acquisition of gold was again allowed, the suppressed appetite of the people led to an astonishing demand for this metal also. Hence it has not been surprising that last year, India having to face an unsatisfactory monsoon, consignments of both metals should have been sent out of the country. The high prices obtained for Indian commodities, raw and manufactured, during the war have been very beneficial to India, and it is quite probable that the Indian reservoir will before long resume the function, indicated by the official statistics to which we have drawn attention, namely, of receiving and absorbing substantial yearly accretions of precious metal.

CAUSES OF RISE IN PRICE OF SILVER.

CAUSES OF RISE IN PRICE OF SILVER.

[Prepared by the Far Eastern Division, Bureau of Foreign and Domestic Commerce, in Commerce Reports, Apr. 6, 1920.]

The rise in the price of silver has been due primarily to an inordinate demand from India, whose domestic production of commodities has been enormously increased during the war by Government measures as a war necessity in order to obviate excessive shipments of raw materials to England for manufacture and reexport to India. As a result India is now industrially self-sufficient in many lines, and as the production of raw materials has at the same time been rapidly increasing, the enormous trade balance in India's favor has had to be met by increasingly large shipments of silver. This demand for silver as a medium of exchange, coupled with a world shortage of silver as a commodity (due mainly to the conditions in Mexican mining districts, the diversion to war industries of labor in other mining regions, the increased use of silver money by soldiers in the field, and the general rise in all commodities in terms of gold), has brought about the present high price of silver.

NEW CURRENCY LAW FOR BRITISH INDIA.

[From Federal Reserve Bulletin, December, 1920.]

India's coinage and paper currency laws have recently been amended. Following is the resolution promulgating the new law:

RESOLUTION.

"The rate at which the sovereign and the half sovereign are legal tender in India has been altered from Rs. 15 to Rs. 10 per sovereign by the Indian Coinage (amendment) Act No. XXXVI of 1920. Also the Indian Paper Currency (amendment) Act No. XLV of 1920 authorizes the issue of currency notes against sovereigns and half sovereigns at the new rate of Rs. 10 per sovereign and against gold bullion at the corresponding rate of rupee 1 for 11.30016 grains troy of fine gold. The Government of India has accordingly decided that, with effect from the 1st October, 1920, sovereigns and half sovereigns shall be valued at the rate of Rs. 10 per sovereign and gold bullion at rupee 1 for 11.30016 grains troy of fine gold in all Government accounts, inclusive of the accounts of the paper currency and gold standard reserves.

"2. Gold mohurs will, however, continue to be valued at Rs. 15 each in all Government accounts except those of the paper currency reserve. Mohurs can now be held in that reserve at their bullion value only, and when it becomes necessary to place mohurs in the reserve hereafter the difference between their equivalent at the 15-rupee rate and the value at which they can be held in the reserve will be treated as an item of expenditure of Government.

"3. All gold and securities held in the paper currency reserve on the 1st October, 1920, will be revalued in accordance with the provisions of the Paper Currency (amendment) Act No. XLV of 1920, and the deficiency in the reserve resulting from the revaluation will be made up by 12 months' treasury bills of the Government of India issued by the controller of the currency to the reserve."

CURRENCY.

[From the bullion letter of Samuel Montagu & Co., Mar. 31, 1921.]

Currency in China is becoming more homogeneous owing to the very large mintage of dollars and fractions that has been made of late years. The use of sycee, broken or otherwise, seems to be diminishing. A North China Herald correspondent remarks that "it is interesting to note how the silver dollar is replacing lump silver. A few years ago dollars were very scarce here but now they are as much in circulation as the copper cash, though the 10 and 20 cash coppers are not much in evidence. At Chungking I was told that 10 and 20 cent pieces were hardly usable, while everywhere west of that city they seem to be welcomed, ten 10-cent pieces changing for a dollar without reference to the Province of origin. In fact Hongkong and Straits Settlements coins are very frequently met with. I suppose, if it were not for the customs regulations, enterprising travelers from Shanghai would make 10 per cent on their funds by investing them in subsidiary coins and bringing them to the west."

UNIFICATION OF SILVER COIN.

[From an article by Tao Teh-Kun in the Trans-Pacific, Dec. 7, 1920.]

Unification of various kinds of silver dollars in the form of a new national silver coin and recalling of various old silver coins is one of the Government's plans for reforming its currency system. This was decided several years ago, and orders have already been given to the Government mints at Tientsin, Nanking, and Wuchang to carry it out.

The chung yuan, or half dollar, is a coin necessary in adjusting exchange and prices, and its circulation on the market has been heartily welcomed by merchants as well as by other classes of the Chinese people. It is therefore necessary for the new mint at Shanghai to coin the chung yuan in particular large quantities, and to raise its fineness from 700 thousandths to 890 thousandths, thus making its fineness uniform with that of the new big silver dollar. When two chung yuan are made equal to one big dollar, both in weight and fineness, the use of the former coin will gradually be extended in proportion to the growing demand for it, based on the nation's improving standard of living. When the use of the chung yuan has become very extensive the Government may hope to effect unification of the national currency system without coining a single new big dollar, the principal unit of to-day.

CHINESE MINTS.

[From an article "A short history of the Chinese mints," by T. H. Yeh, in Peking Leader special anniversary supplement, Feb. 16, 1920.]

At the beginning of the third year of the Republic, the office of the superintendent of the head mint was revived and Wu Ting-chang was appointed to the post. A currency law modeled after that of the late Ching Dynasty was promulgated by the Hsiung Hsi-ling Cabinet. The system of head and branch mint was restored and the directors of the branch mints at Mukden, Nanking, Wuchang, Chengtu, Canton, Yunnan, and Changsha were appointed by the ministry of Finance. At the same time a series of regulations for the head and branch mints were promulgated by the ministry. According to these regulations the head mint would have absolute control of the branch mints and would recommend the appointment of their directors and send inspectors to inspect them periodically. This feature of the regulations was modified after only a short time when the Hsiung Cabinet resigned and both the head and the branch mints placed under the direct control of the ministry. The revised new regulations of 51 articles are still in force, there being no others to supersede them. According to these regulations there are three departments in a mint, the general business, the operative and the assay departments, all of which are subdivided into sections. The superintendent of the head mint receives a salary of from \$500 to \$600 per month with \$100 expense, while the directors receive \$400 salary with \$100 expense. There are definite scales of payment to other members of the mints. The funds of the mints, with the exception of a sum for miscellaneous expenses, are to be deposited at banks designated by the Ministry of Finance. The accounts of a mint shall be separated into two kinds, the first for the receiving of metals, the minting, storing, and exchange of coins, and the second for the maintenance of the mint. The funds for the second account may be transferred from the first according to a monthly budget and before there is any definite appropriation for the mints, but beyond this the fund in the first account is not transferable by the mint authority without the permission of the ministry. The exchange business is to be intrusted to a bank or banks designated by the ministry. Reports are to be sent to the ministry monthly.

The above regulations were issued when Mr. Chou Tze-chi was the Minister of Finance and Mr. Liang Chi-chao was the Director General of the Currency Bureau which was divided into a note and a mint department. The control of mints was therefore a joint affair of the bureau and of the Ministry of Finance. The bureau was, however, abolished when Mr. Liang Chi-chao resigned at the end of the third year of the Republic (1914). The affairs of the mints were again solely controlled by the Ministry of Finance. Before his resignation, Mr. Liang Chi-chao submitted among other proposals of currency reform one for the reorganization of mints to the late President Yuan. The scheme was divided into two sections, viz, (a) general system and (b) internal organization. Under the heading of general system were included (1) the abolition of superfluous copper mints; (2) the examination of fineness and weight by a commission; (3) the limitation of the amount of subsidiary coins to be minted within two years; (4) the division of work between mints and the Bank of China, the mints only making coins while the bank taking charge of the exchange

business, and the definite appropriation from the treasury for the expenditure of the mints so that they need not depend upon profit for their existence; and (5) the employment of technical experts instead of ordinary officials for the post of the directors and the working staff of the mints. Under the heading of internal organization were included (1) the revision of the detailed methods and rules of mint management; (2) the adoption of modern and suitable methods of bookkeeping; (3) the improvement of technical skill; and (4) the elevation of the authority and power of the assay department in the mints. This scheme may be applicable without much modification at present.

The minting of the new Republic dollar bearing the image of the late President Yuan was also initiated by the former Bureau of Currency in the third year of the Republic. The fineness of the dollar was at first decided to be 900 per thousand, but was later altered to 890 per thousand, with a legal allowance of three in a thousand. The reason of the alteration was to make the fineness of the new dollar to be approximately equal to that of the old Peiyang dollars, which had large circulation and which was nearly 89 per cent fine, so that the two kinds of dollars could be exchanged at par with each other.

CHINESE BANKS.

[From *Moniteur des Intérêts Matériels*, Paris, Aug. 24, 1921.]

The banks are naturally divided into four groups: The old-fashioned Chinese banks, the banks organized on modern principles, the foreign banks, and the banks combining foreign and domestic finance.

Among the old-fashioned Chinese banks one can distinguish four different types. The P'iao Hao, for instance, cover the greatest part of the silver movement and exchange operations within the country. . . . Owing to the competition of the modern banks they disappear gradually from the large cities and commercial ports. The Ch'ien Chuang are likewise banks organized on the old methods; whereas the modern banks demand security before lending their money and pay small interest on deposits, the Ch'ien Chuang banks promise the highest interest to their depositors and do not ask any security from their borrowers. The Lun Fang have as their primary object to melt silver into "sycee," which serve as principal medium of exchange in the interior of China according to their weight. These establishments, serving as intermediaries to banking affairs, are found in Peking, Tientsin, Hangkeon, Moukden, etc. Prior to the organization of the branches of the Bank of China in different cities, the Kuang Yin Hao dealt in the financial obligations of the various provinces. Now half of them at least have been turned into provincial banks.

The first modern bank was founded at Shanghai in 1898 under the name of Bank of Commerce by Sheng-Houan-Huai, the founder of the Hanyehping Company and other modern industries. Since then the number of modern banks increased considerably. At the side of these establishments have been established special banks, such as the Bank of China, which serves as state bank, the bank of railways administering the revenues of the latter, the bank of the salt revenues, etc. Including the above-mentioned provincial banks, there are to-day in China not less than 200 modern banks and branches with a paid-up capital of more than 40 million dollars. The most important 32 modern banks are combined into a national banking consortium.

The foreign banks which have offices in China are as follows:

England.—The Hong-Kong and Shanghai Bank, and the Chartered Bank.

Japan.—The Yokohama Specie Bank, the Bank of Taiwan, the Sumitomo Bank, and the Mitsubishi Bank.

United States.—The International Banking Corporation and the Asia Banking Corporation.

France.—The French Bank of Indo-China, the Russo-Asiatic Bank (Russia).

Belgium.—The Belgian Foreign Bank.

Holland.—The Netherlands Bank.

Germany.—The Deutsch-Asiatische Bank.

The fourth category of banks, which combine Chinese and foreign capital, consists of the Chinese American Bank of Commerce, the Industrial Bank of China, the Sino-Italian Bank, and the Sino-Japanese Bank.

Imports and exports of gold and silver since 1911. (*Montagu letters, July 23 and 28, 1921.*)

(In *halkwan* taels.)

Year.	Silver.		Gold.

The following coins are used: Brass cash $\frac{1}{10}$ -cent pieces; copper 1-cent pieces; small silver coins of 5, 10, and 20 cent denominations (1 Mexican dollar=11 dimes). The chopped dollars are of the following descriptions: Two kinds of Mexican dollars, Chinese yuan dollars, American trade dollars, Straits Settlements dollars, Hongkong dollars, Japanese silver yen, Indo-China dollars, Philippine silver pesos, Spanish dollars. The chopped dollar is usually at a discount of 2 to 4 per cent in comparison with the clean Mexican dollar.

HANKOW.

The amount of Mexican silver dollars coined during the year ended December 31, 1920, was 15,510,726 Hankow taels (\$17,666,717).

The amount of Mexican silver dollars withdrawn from monetary use for recoinage during the year ended December 31, 1920, was 889,274 Hankow taels (\$1,012,883).

The exports of silver to other Chinese ports during the year 1920 was as follows: Coin, 8,391,518 Hankow taels (\$9,557,939); bullion, 31,500 Hankow taels (\$35,879).

HARBIN.

EXCHANGE BROKERS DO THRIVING BUSINESS.

[Trade Commissioner Lynn W. Meekins, in Commerce Reports, Dec. 23, 1920.]

The business that thrives most in Harbin as elsewhere in China is that of the exchange brokers. A large number of Russian merchants whose trade has dwindled to nothing are now making a living through exchange. Scores of them may be seen during the forenoon in a restaurant on the principal thoroughfare of Pristan discussing the day's rates. Naturally they are most interested in rubles, but these have practically disappeared from circulation, and the exchange with which American firms are most concerned is that between the silver dollar and the gold yen. This rate fluctuates hourly instead of daily, as is the case in most treaty ports. During my stay in Harbin the range was about five points, giving the banks and the dealers a considerable margin of profit.

KINDS OF MONEY IN CIRCULATION—COLLAPSE OF RUBLES—POSITION OF YEN.

Actual gold or silver coin is not often seen, and ruble gold pieces are more or less of a curiosity. Chinese silver dollars and the Harbin notes of the Bank of China and the Bank of Communications circulate at par. There is no "small" money; that is, the depreciated 10 and 20 cent coins common elsewhere. Chinese money is current on the Chinese Eastern Railway, in the city of Fuchiatien, and among Chinese merchants in the district. In the railway zone in Harbin, which includes the non-Chinese business section, the yen is in general circulation. Notes issued by the Bank of Chosen in various denominations of yen and sen constitute the prevailing medium of exchange. The Chinese merchants will accept the yen, but much prefer the silver dollar. American bankers estimate that half of the business of the Harbin district is conducted in dollars and half in yen.

The Russians in Harbin are holding millions of paper rubles with the hope of an eventual appreciation in value. There seems to be some chance of the Romanoff and possibly the Kerensky ruble regaining, in time, a fair exchange value, but the subsequent issues have depreciated to a hopeless extent, the record being that of a Siberian ruble, which fell from a nominal exchange basis of 200,000 to 1 yen. The collapse of the ruble is the primary cause of the commercial dullness in Harbin, the distributing center for a territory in which the ruble was formerly the only medium.

The close approximation of the gold ruble to the yen in value has made it easy for the Japanese to introduce the latter in north Manchuria and Siberia. The yen is frequently termed a gold ruble, and is more welcome to the Russians than the Chinese dollar, because they are accustomed to a gold instead of a silver basis. It should be kept in mind, however, that the present situation is only temporary; that the largest proportion of the business in north Manchuria is transacted by the Chinese; and that the future business of the Harbin district will be chiefly with Siberia, so that the yen will neither drive out the ruble permanently nor displace the Chinese dollar. It is serving a useful purpose at present by helping to stabilize the currency situation and it will continue to figure in the growing Japanese business in north Manchuria, but there is no indication that it will dominate the money market in the Harbin district.

HONGKONG COLONY.

The total import of United States gold coin during the year ended December 31, 1920, was £10,271,307 (\$49,985,316).

No gold or silver exported to foreign countries during the year 1920.

CURRENCY IN CHINESE-CONTROLLED MANCHURIA.

[Consul General Albert W. Pontius, Mukden, in Supplement to Commerce Reports, Dec. 29, 1920.]

The currency throughout Chinese-controlled Manchuria is in the same unsatisfactory condition as in other parts of China, there being no standard coin nor any fixed rate between numerous moneys current. The value of each is determined from day to day according to credit of issuer, denomination, demand for it in the market, etc. The ruble has depreciated more than any other currency, the Japanese yen alone maintaining really sound value.

Currency of the following equivalent is negotiable: (1) Chinese currency—such silver as the sycee, one dollar, and subsidiary coins; copper in old cash, one-fiftieth and one one-hundredth of one-dollar coins; notes issued against new silver coins and old copper cash. (2) Of foreign currency—such silver as the old Japanese yen, Japanese subsidiary coins, Russian subsidiary coins, Hongkong dollar and Mexican dollar; notes issued against such currency, consisting of silver-standard notes from the Yokohama Specie Bank and various foreign banks of Tientsin and Shanghai; gold-standard notes from the Bank of Chosen and Bank of Japan; and in normal times the Russian ruble notes.

SHANGHAI.

MOVEMENT OF TREASURE (IMPORT AND EXPORT OF GOLD AND SILVER).

[Consul General Edwin S. Cunningham, in Supplement to Commerce Reports, Dec. 8, 1920.]

During the year 1919 the imports of gold and silver were very great and amounted to \$139,446,774, as compared with \$47,102,302 in 1913 and \$35,485,207 in 1918; the importation of gold amounted to \$811,772 in 1918, as compared with \$60,214,770 in 1919. The exports of gold in 1918 were \$2,636,738, as compared with \$14,578,062 in 1919. Silver imports advanced from \$34,675,435 in 1918 to \$79,232,004 in 1919, and came principally from the United States and Hongkong. Exports of silver were \$9,927,033 in 1918, as against \$49,575,492 in 1919. The importation of gold in 1913 was \$2,425,739 and the exportation \$3,288,138, and the importation of silver for the same year was \$44,676,563 and the exportation was \$29,762,479.

Year.	Imports.		Exports.	
	Gold.	Silver.	Gold.	Silver.
1913.....	\$2,425,739	\$44,676,563	\$3,288,138	\$29,762,479

STOCK OF SILVER IN SHANGHAI BANKS ON JANUARY 1, 1921

[From Commerce Reports, Jan. 10, 1921.]

The stock of silver held by the Shanghai banks on January 1 was approximately \$77,000,000 (\$61,600,000 Mexican, which is about double the quantity so held last year. In the years previous to the war the silver holdings of the Shanghai banks averaged about \$100,000,000 Mexican.

ESTABLISHMENT OF A MINT AT SHANGHAI.

[From Moniteur des Interêts Matériels, Mar. 10, 1921.]

The Minister of Chinese Finances has just closed an agreement with a group of bankers regulating the terms of a loan for the purpose of stabilizing the Chinese money. The loan will amount to \$2,500,000, bearing 9 per cent interest and payable in three years. The yield will be used for the building of a mint at Shanghai. It is the first establishment of this kind possessed by China. It will also be one of the greatest in the world. It will allow of coining half a million dollars a day.

SWATOW.

MOVEMENT OF TREASURE.

[Consul Myrl S. Myers, in Supplement to Commerce Reports, Dec. 31, 1920.]

Imports expanded from \$786,002 in 1918 to \$1,181,565 in 1919, as a result of gold shipments, and exports dropped from \$2,293,806 to \$1,111,509, owing in part to the prohibition by the local authorities, enforced since June, 1918, on the export of Chinese minted coins. The gold imports included \$230,902 in bullion and \$185,995 in gold coins, American and English, from Hongkong and \$153,010 in bullion from Shanghai. Gold is used for hoarding and in the gilding industry. Silver imports from Shanghai, Hongkong, and Siam, in the order named, fell off. With the exception of \$25,000 in gold to Siam and Hongkong, exports were entirely in silver coins to Shanghai, Amoy, Hongkong, Siam, and Foochow, in the order named. Throughout the year gold coin had actually been at a premium over exchange quotations ranging between 15 and 30 per cent.

Imports and exports in 1919.

	Imports.	Exports.

The actual currency is silver.

A mint for copper coins is about to be established at Tsinan.

The coins in circulation at Tsinan and vicinity are the Yuan and Yuan subsidiary coins, 10 cents, 20 cents, and 50 cents. The Yuan is the local standard, but small amounts of Hongkong and Mexican dollars are accepted at par, being otherwise, in large amounts, subject to discount.

CYPRUS ISLAND.

Maximum issue of currency notes for 1920, £700,000 (\$3,406,550).

PAPER CURRENCY—EXCHANGE.

[From Bankers Magazine, London, December, 1920.]

There are in circulation Government currency notes in denominations of £10, £5, £1, 10s., and 5s., all full legal tender. There are no bank notes.

The paper notes issued by the Government of Cyprus have effectually displaced the silver and gold coins previously in circulation. Hoarding of the coins is prevalent, and at the present time paper notes are the sole medium of exchange. Cheques do not fill the void, nor do they function as in England or the United States of America. In the circumstances there is no elasticity either in the banking machinery or in the paper circulation.

Pence, curiously enough, do not appear in Government, banking, and commercial accounts; accounts are kept in pounds, shillings, and copper piasters.

The average exchange for bills on London is approximately $\frac{1}{2}$ per cent above par, but, like everything else in these days, variations are frequent. Sometimes exchange is quoted 2–3 per cent below par, and sometimes $1\frac{1}{2}$ –3 per cent above par. At the end of 1919 the exchange for drafts on London was $1\frac{1}{2}$ –2 $\frac{1}{2}$ per cent above par for sellers and $\frac{1}{8}$ per cent above par for buyers, due, in this particular instance, to heavier exports than usual to England.

FEDERATED MALAY STATES.

There is no mint in the Federated Malay States. Nor is there a special Federated Malay States currency. The coins and paper issued by the Straits Settlements Government are used.

No gold or silver has been used in the industrial arts during the year ended December, 31, 1919.

The quantity of gold produced from deep mines and placer mining during the year ended December 31, 1919, was 16,402 ounces; value, about 626,600 Straits Settlements dollars (\$355,783).

¹ Conversion rate 1 yuan dollar = \$0.79217, at the 1920 average price of silver, \$1.0194.

Stock of gold and silver, also of paper money, used for monetary purposes on Dec. 31, 1919.

THE PIASTER LEGAL TENDER AT FIFTEEN FRANCS.

[From L'Economiste Européen, Paris, Apr. 16, 1920.]

An order recently issued by M. Long, Governor General of Indo-China, makes the piaster legal tender at the rate of 15 francs, to put an end to the rising price of this native coin. It is well known that the continuous advance in the price of the piaster had been worrying the authorities for some time past. The measure recently taken had been considered in Paris prior to M. Long's departure.

THE MONETARY PROBLEM.

[From an article by René Théry in L'Economiste Européen, Paris, Dec. 24 and 31, 1920.]

Since 1895 the legal money of the colony is the French or commercial piaster. For eight years there also circulated the Mexican piaster (weight, 27.073 grams; fineness, 0.9028), freely exported and imported, subject to an export duty of 3 per cent ad valorem.

This double régime, supplemented for the exclusive needs of domestic transactions by a secondary system called *sapèque*, offered many similarities with the organization of China.

While meeting the needs of the traffic in the extreme Orient, it offered an annoying instability for the exchanges with Europe, because the gold value of the piasters depended on the fluctuations of the price of silver; the latter fell incessantly and rendered the purchases of Indo-China in the Occident more and more difficult.

Almost all the Asiatic countries, in order to remedy this condition, stabilized their national money by founding a conversion fund and laying aside a reserve of yellow metal. This was not deemed possible in our colony, because there was too large a deficit in its balance of accounts. But since the Mexican piaster seemed more subject to exchange fluctuations than the French piaster it was decided in 1903 that it should cease to be legal tender, and its importation was prohibited. Two years later, the exportation of French piasters and even of metallic silver was prohibited.

These regulations lacked all flexibility. Foreign debtors would not have been able to pay in metal specie except by procuring commercial French piasters or by sending bars; as to the Indo-Chinese, in order to pay their foreign debts, they had no other means than *cambist* operations * * * unless they exported specie secretly and fraudulently. Moreover, experience proved that the looked-for stabilization was not attained. In fact, the rate of exchange of the French piaster remained dependent on the oscillations of metallic silver, with this aggravating circumstance that at the time of settlements the importers and exporters caused rises and falls in the tokens, which could have been avoided by movements of metallic money. * * *

The colony had a circulation of notes issued by the Bank of Indo-China, payable at sight and covered by a metallic reserve which was equal to one-third of their total amount.

Up to 1914 the piaster was extremely depreciated with regard to gold, to the advantage of exports to the West, but to the detriment of all persons who had to send payments to France, England, Germany, Japan, and the United States. Its rate of exchange in 1914 was about 2.50 francs.

At the beginning of the war it underwent a new depreciation of about 10 per cent. Then, beginning with August, 1915, it rose regularly and at the time of the armistice it reached the level of 4.50 francs. The rise of the piaster from August 1, 1914, to November 11, 1918, was about 80 per cent and that of silver in New York, during the same period, was 75 per cent.

Naturally, the supply of piasters struck at Paris could not be secured under the same conditions as in the past, and the monetary needs had to be met by secret importations of Mexican piasters, of bars, and particularly by increasing the fiduciary circulation. On August 4, 1914, the French Government had authorized the colonies to suspend the requirements of the organic acts fixing the minimum metallic cover at one-third of the notes. On the eve of the declaration of war this reserve amounted to 14,500,000 piasters and the fiduciary circulation to 32,500,000. At the beginning of 1918 the circulation was 36 millions and the metallic cover 16 millions. At the end of the war the circulation rose to almost 40 millions covered by less than 9 millions.

In 1919 the situation of creditor of the colony with regard to its neighbors and their inability to pay in metallic specie increased the premium of the piaster, so that between February, 1919, and February, 1920, the piaster rose from 4.50 francs to 16.50 francs.

To meet the demand for hard cash, the Bank of Indo-China had to reduce its metallic reserve and increase its note issue: On January 1, 1920, the metallic reserve had dropped to less than 6 millions against a circulation of more than 50 millions; in April the circulation attained to 71 millions and the metal cover to 5,600,000. It was deemed then necessary to enforce the note circulation. Afterwards the situation improved slightly, thanks to considerable entries of metal; nevertheless, the circulation at present exceeds 75,500,000 and the metallic stock amounts to 8 millions.

Fractional coins with an inferior fineness were issued at the same time when the enforcement of the note circulation was proclaimed. This measure accentuated the extremely complex character of the present monetary situation of the colony.

In spite of the enforced note circulation, the silver piaster continued to circulate in abundance, even in cities, and the indigenous population began to show a certain distrust of bank notes. The fractional coins of inferior fineness have not been accepted without reluctance.

It seems, therefore, that the present monetary circulation of the colony does not meet the needs of the public. As a proof of this, we find now contracts expressly stipulating for payments in silver bars or gold leaves.

The Indo-Chinese Monetary Commission has come to the conclusion that the best remedy would be to adopt the gold standard. A sufficient number of gold coins would be put in circulation, but the silver coin would retain its power of unlimited legal tender. On the other hand, all persons who have to make payments abroad would receive in

exchange for white piasters the necessary means of remittance in foreign tokens according to the gold rate of exchange of these tokens. Finally, the forced circulation of bank notes ought to be abolished as soon as possible by insuring their convertibility into gold or silver.

The reform would be completed by establishing a yellow-metal reserve of 20 million francs. In order to prevent fraud, the right to export precious metals would be reserved for the Government and for the persons specially authorized by it in each particular case. Importation, however, would remain free. The coinage of silver piasters would be executed by the Government according to the needs.

JAPAN, INCLUDING CHOSEN, TAIWAN, KARAFUTO.

Dec. 27, 1920.....	2,183,000,000	889,000,000	1,294,000,000	1,107,000,000	1,076,000,000

The Department of Finance, Japan, reports imports of gold into Japan in excess of gold exports as 324,286,000 yen during 1919 and 355,682,000 yen during 1920. Comparing these figures with the increments to these official holdings of gold in Japan shows that during 1919 about 75,000,000 yen in gold must have been added to private holdings, while during 1920 about 50,000,000 yen was undoubtedly transferred from private to official stocks.

Of the 1920 net gold imports, all but about 76,000,000 yen is accounted for by the reductions of official holdings abroad, whereas during 1919 the holdings abroad increased almost as much as did those in Japan. Nevertheless, the total of these gold stocks increased 126,000,000 yen during last year. The shift of 162,000,000 yen from Government ownership to that of the Bank of Japan is also an interesting feature, especially in view of the financial crisis experienced during the year.

Monetary stock and note circulation of the Bank of Japan.

Record specie holdings.

[From "Pacific Ports," Seattle, February, 1921.]

At the beginning of November Japan's specie holdings crossed the last highest record as established December 27, 1919. The country holds now the largest amount of gold she has ever had to her account. The total reached 2,059,000,000 yen October 31.

According to the finance department, the amount of gold held October 31 was an increase of 7,000,000 yen over the report of October 15. It was also an increase of 2,000,000 yen as compared with the country's holdings of bullion December 27, 1919.

Of this record amount, 888,000,000 yen was held to the account of the Japanese Government, which was an increase of 1,000,000 yen over the report of October 15. The Bank of Japan's holdings amounted to 1,171,000,000 yen, the figures being an increase of 6,000,000 yen.

The present increase in Japan's specie is mainly attributable to exchange banks' remittance of gold, which means in some measure the greater decay in foreign trade. The gold holdings at home reached 937,000,000 yen October 31, with an addition of 33,000,000 yen, while the amount of bullion Japan held overseas at the same date reached 1,122,000,000 yen, the figure being a decrease of 26,000,000 yen.

NEW COINS.

[From The Far Eastern Review, Shanghai, December, 1920.]

The Japanese Government will mint 10-cent nickel pieces in place of silver.

There is no premium on gold coins as compared with the actual currency consisting of silver coins and bank notes, scarcely any gold coins having ever been in actual circulation. Foreign gold coins, however, are dealt in for hoarding and for industrial art purposes and usually command a premium as compared with their mint value expressed in local currency.

The premium on sovereigns ranged from 16 per cent to 24 per cent in 1919. The premium on eagles ranged from 6 per cent to 10 per cent in 1919.

NEW PHILIPPINE CURRENCY LAW.

[From The Far Eastern Review, Shanghai, December, 1920.]

The Philippine senate has adopted without debate the amendment of Senator Guanco to the currency law, which is intended to solve the present currency stringency and exchange situation in the Philippines. Among the most important provisions of the bill is the fixing of the reserve funds of the government at not less than 60 per cent of the nominal value of the treasury certificates in circulation, until the total circulation has reached ₱120,000,000. The bill also authorizes the government to pay a premium on all exchange bought in New York.

SARAWAK.

The quantity of gold and silver produced from deep mines during the year ended December 31, 1919, was as follows: Gold, 671.2 kilograms fine (21,579 ounces); value, \$446,080; silver, 195.4 kilograms fine (6,282 ounces); value, \$7,041.

THE MONETARY SITUATION.

[From the bullion letter of Samuel Montagu & Co., London, July 22, 1920.]

The rise in the market price of silver has proved a fruitful source of embarrassment in connection with Siamese currency. The tical having ceased to be protected by its intrinsic value, the Government had recourse to notes of the denomination of 1 tical and also sought to check the drain of silver currency by issuing in January, 1919, an amendment to the paper currency act, making notes temporarily inconvertible for a period of six months; this period has since been renewed. Further, it was necessary to issue a new subsidiary silver coinage, consisting of pieces of 50 cents with a reduced fineness of 650, the tical of 900 fine being melted down for the purpose. Notwithstanding this reduction, the continual and phenomenal rise in the price of bar silver compelled the Government to raise the theoretical value of the tical on three occasions. It may be mentioned that the theoretical unit of the Siamese monetary system was fixed in the gold standard act of the year 1908 at 55.8 centigrams of pure gold, the silver tical containing 13.5 grams of pure silver having a value equal to 55.8 centigrams of pure gold.

SIBERIA.

PROVISIONAL GOVERNMENT OF THE FAR EAST ISSUES NEW NOTE CURRENCY.

[From Commerce Reports, Aug. 5, 1920.]

According to June numbers of the Vladivostok newspaper *Golos Rodiny*, the provisional government of the Far East, which has its seat in Vladivostok, has issued a new currency, amounting to 150,000,000 rubles. It is supported by a gold and silver reserve, amounting to 70,000,000 gold rubles. The new ruble is equal to one-tenth of the gold ruble, and as 2,000 Siberian rubles were equivalent to 1 yen at the current rate, one new ruble was figured as equaling 200 Siberian rubles. At this rate the new currency was freely exchanged for Siberian rubles up to June 18. The new rubles were printed in the United States, and owing to the fact that they are technically perfect they are fairly well protected from counterfeit. All classes of the population (business circles, banks, etc.) regarded this reform favorably.

THE COURSE OF DECLINE IN SIBERIAN CURRENCY.

[From Commerce Reports, Mar. 1, 1921.]

From a financial point of view there were three periods in the Russian Maritime Province during the year 1920:

1. The period of circulation of Vladivostok rubles: At the beginning of the year the rate of this ruble was 160 per yen, the rate steadily increasing until the middle of June, when it reached 3,000 per yen. The Siberian Government then decreed that one new ruble was equal to 200 Siberian rubles. This effort at financial reform was met with hostility by foreigners, who refused to accept the rubles and went on a strike by closing their shops. The larger Russian merchants, also, were very antagonistic.

2. The period of new or "buffer rubles": These foreigners and the large Russian merchants began a campaign that succeeded in lowering the rate of exchange of the new rubles, called buffer rubles, 10 of which had been decreed to equal 1 yen.

3. Period of silver coin issue. In October, when the Siberian Government issued small coins of silver, a considerable part of them was bought at $3\frac{1}{2}$ to 4 rubles per yen and shipped abroad for melting. From the moment of issue of these silver coins the buffer rubles practically disappeared from circulation.

STRAITS SETTLEMENTS.

The notes of the Bank of Issue consist of the notes issued by the Hongkong and Shanghai Bank and the Chartered Bank. The banks are bound by ordinance to maintain specie to the extent of the amount of the issue of their notes. The paper money indicated above is held as active cash.

The Straits Settlements dollar, which is a silver coin, is the standard coin of the colony but sovereigns are legal tender at the rate of £7 for 60 Straits dollars. Sovereigns are not in active circulation.

LAWS AFFECTING THE CURRENCY.

By the Straits Settlements (coinage) order 1920, the fineness of the silver dollar and 50-cent piece was reduced to 500 thousandths; the weight of the dollar was reduced to 260 grains, of the 50-cent piece to 130, and of the 10-cent piece to 32.5.

NOTE.—The amount of gold and silver ore imported or exported is unknown.

SYRIA.

MONETARY SYSTEM.

[High Commissariat of the French Republic in Syria and Lebanon, Beirut, Apr. 6, 1921.]

The official money in Syria since March 31, 1920, is the Syrian money. The monetary unit is the Syrian pound divided into 100 Syrian piasters. This money is represented exclusively at present by bank notes which the Bank of Syria has been authorized to emit in accordance with a decree of the High Commissary of the French Republic in Syria-Cilicia of March 31, 1920. There have been put into circulation notes of 1 piaster, 5 piasters, 10 piasters, 25 piasters, 50 piasters, 1 pound, 5 pounds, 10 pounds, 25 pounds, 50 pounds, 100 pounds. The Syrian note is payable at par on sight or by check issued on the Bank of Syria at Paris. The Syrian pound is worth 20 francs. The Syrian money is legal tender only in the territories under French mandate. The circulation of foreign metallic money is not forbidden. In fact, there is considerable circulation of Turkish gold and silver coins (Turkish gold pound, megidie, Turkish piaster) in the regions of Damascus and Aleppo.

THE CURRENCY SITUATION.

[From Commerce Reports, July 28, 1920.]

The monetary system existing to-day in Syria is greatly complicated, and it can be said that each town has its own money and exchange. At Beirut large payments are made in Egyptian paper money. But as subsidiary money of less than 5 piasters is lacking, old Turkish silver and nickel coins are used. In Lebanon and

in the interior, Turkish piasters are also in use. Gold circulates in much larger quantities than one would expect, especially at Damascus and Aleppo.

In Palestine, Egyptian money is accepted everywhere and is made use of effectively. In Cilicia almost nothing but Turkish paper is employed.

TRANSCAUCASUS.

FINANCIAL CONDITIONS.

[From Supplement to Commerce Reports, Nov. 10, 1920, Vice Consul Hooker A. Doolittle, Tiflis, July 1, 1920.]

Even before Transcaucasia had separated itself politically from Russia, its governing body, the Transcaucasian Commissariat, had been forced to print its own money because of difficulties of communication with Moscow and Petrograd. Notes were printed in four languages—Georgian, Armenian, Tartar, and Russian—and were called Transcaucasian bonds. These notes, estimated at 2,000,000,000 rubles, were supposed to constitute a lien against the resources of the Caucasus. When Georgia declared its independence, Azerbaijan withdrew from the financial convention, and Georgia continued to print these Caucasian bonds with Armenia until the latter half of the year, when each began the issue of its separate money.

DEPRECIATION OF CURRENCIES.

The value of Transcaucasian and Georgian paper fell steadily throughout 1919. Its gold value dropped from 20 rubles to the dollar at the beginning of the year to more than 200 rubles to the dollar by December, 1919. Taxes and extraordinary measures applied, such as confiscation of property and Government monopoly of imports and exports, failed to keep pace with the rising cost imposed by the falling exchange.

The practical devaluation of this paper and the lack of any manufacturing or immediately available resources in the country affected all forms of commerce until trade became a mere matter of petty bartering. The peasants were swamped with more money than they could use until they refused to exchange their crops for it. Due to arrangements with the Government, a certain amount of manufactured goods was imported, but, in spite of the enormous per capita figures in rubles, toward the end of the year practically all imports ceased, owing to the small purchasing power of the population.

BANKING SITUATION UNFAVORABLE TO TRADE DEVELOPMENT.

The banks operating in the Caucasus are with few exceptions branches of Moscow or Petrograd establishments long ago nationalized and looted. Inasmuch as local regulations prohibit the withdrawal of more than 1,000 rubles from an account in any one week, no one makes any deposits, and the banking business has degenerated into speculating in exchange.

Such banks as have available currency lend it at high rates, 12 per cent per month being a common figure. Therefore the local merchant who wishes to import goods must wait until he has the actual cash in hand to cover his purchases. Even then his cash shrinks in value as it is held. This forces him to buy and sell from day to day and never to carry stocks. The rule has been that only those foreign firms who have brought the actual goods to the market, held them at the port, and sold them piecemeal have been able to do any business. It is estimated that not \$10,000 worth of merchandise was imported into the Caucasus in 1919 on mail orders.

Recognizing these conditions, French and Italian merchants have brought in only such merchandise as could be readily sold in small lots and at a high profit, such as perfumes, drugs, clothing materials, and shoes. Rumors of enormous profits in articles of this character led to a flooding of the market with them at tremendous prices early in 1920, while the great demand for machinery, structural materials, railroad equipment, and those articles which come in large and expensive units went unsatisfied.

EXCHANGE COMPLICATED—VARIED CURRENCIES IN USE.

The exchange situation is further complicated by the variety of currencies in use. These are: (1) Imperial rubles, which were out of circulation for most part on account of hoarding; value, 100 equal 250 Transcaucasian rubles. (2) Kerensky rubles, which were out of circulation on account of local decrees; value, 1,000 equal 750 Transcau-

casian rubles. (3) Don rubles, the money of the Don Province and formerly used by the volunteer army, circulate only in Batum; after defeat of volunteers, dropped greatly in value; value, 1,000 equal 350 Transcaucasian rubles. (4) Transcaucasian rubles, issued by the three Caucasian States together, are in circulation in all three countries now and represent a standard, but are beginning to disappear from circulation except at Batum, where they are the only rubles accepted by all. (5) Georgian rubles, printed by Georgia alone and current only in that country, stand at 5 per cent discount off Transcaucasian rubles; (6) Azerbaijan rubles, printed by Azerbaijan and current only in that country, stand at 5 per cent discount under Transcaucasian rubles.

AFRICA.

ABYSSINIA.

GOLD PRODUCTION.

[From bullion letter of Samuel Montagu & Co., Mar. 31, 1921.]

We understand that gold is exported from Abyssinia in the form of rings of which the shape varies. The assay is generally 940 milliemes gold and 54½ silver. Such a quality seems to indicate that the metal may be derived from gold dust, and suggests that Abyssinia may be a producer, though not figuring as such in official returns.

ALGERIA.

French coins circulate in Algeria, being the legal coins, but France does not coin specifically for Algeria.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1920, was as follows: Gold, 1,027 fine kilos, valued at \$614,126; silver, 7,282 fine kilos, valued at \$272,430.

Stock of gold and silver coin, also paper money, on Dec. 31, 1920.

Gold and silver coin in Bank of Algeria, the official bank	\$13, 532, 315
Bank of Algeria notes.....	220, 432, 368

The Bank of Algeria is authorized to issue currency up to 1,300,000,000 francs (\$250,900,000). The difference between this sum and the above 1,142,136,622 francs (\$220,432,368), or 157,863,378 francs (\$30,467,632) is held as reserve stock.

Actually, there is a premium on gold, but not officially. Fifty francs paper for 20 francs gold is paid by jewelers. This is against the law, however. The premium varies, but extent is unknown.

The actual currency is paper francs.

No laws affecting the coinage, currency, or banking have been passed so far.

The imports of silver bullion during the year ended December 31, 1920, amounted to \$748.

The exports in 1920 were as follows: Gold coin, \$50; silver coin, \$1,235.

BELGIAN CONGO.

The quantity of gold and silver produced from the mines during the year ended December 31, 1920, was as follows: Gold, 3,011 fine kilos (96,804 ounces), valued at \$2,001,113; silver, 332 fine kilos (10,674 ounces), valued at \$10,881.

Stock of silver and paper money in circulation on December 31, 1920: Silver coin, 25,860,000 francs (\$4,990,980); notes of banks of issue, 35,000,000 francs (\$6,755,000).

LAWS AFFECTING THE CURRENCY.

By royal decree of December 28, 1920, 1-franc and 50-centimes pieces of an inferior metal (copper and at least 25 per cent nickel), weighing 10 and 6.5 grams, respectively, may be struck up to 12 million francs.

The laws of September 6, 1915, and February 13, 1920, restored the circulation of the Belgian Congo Bank notes, and prohibited the exportation of gold and silver coin.

Coinage executed.

[From Belgium mint report for 1920, Brussels, 1921.]

Copper:		
2 centimes.....	10,000	
1 centime.....	5,000	

¹ Coinage executed at Birmingham.² Coinage executed at Brussels.

By temporary derogation from the monetary convention of November 6, 1885, the convention of March 25, 1920, between the countries of the Latin Union authorized the Belgian Government to coin for the needs of the Colony, up to 12 million francs, special coins of inferior metal having nominal values of 1 franc and 50 centimes. These coins are not accepted by the public banks of Belgium and the other countries of the Union. Belgium agreed to demonetize an equal amount of its own 5-franc pieces.

The alloy for this new money will consist of 25 per cent nickel and 75 per cent copper. The new coins are not perforated in the center. The 1-franc piece has a diameter of 29 mm. and a weight of 10 grams. The 50-centime piece has a diameter of 24 mm. and a weight of 6½ grams.

On December 31, 1920, the coinage executed amounted to 4,475,000 1-franc pieces, which were immediately shipped to Congo. The entire coinage of 12 million will be executed within a short time.

The Colony suffered in 1920 from an extreme dearth of metallic money.

The Belgian Congo Bank note issue amounted at the end of November, 1920, to 38,119,921 francs.

GOLD MINING.

[Vice Consul Charles J. Pizar, Cape Town, Mar. 1, 1921.]

While all other gold fields in the world are exhibiting a diminution in ounce production, the little-known area of Kilo, in the northeastern part of the Belgian Congo, is increasing its output and last year turned out gold to the value of over £400,000.

Kilo is more or less of a mystery area * * * but it is common knowledge that for the past 15 years the Kilo and Moto mines have, under a form of State-owned proprietorship, been yielding substantial quantities of precious metal. The output was until lately exported via Lake Victoria Nyanza and the Uganda Railway through Mombasa, but more recently the development of the Congo River route has induced the management of these properties to utilize that great waterway and to export via Boma.

At present the State-owned gold mines of the Kilo and Moto countries produce roughly 3,000 kilograms of gold yearly, and the Senguli mines (belonging to the Kassai Company and situated also in the Northeast Congo) produce 2 to 3 kilograms of gold monthly. When heavy machinery can be sent there outputs will be increased. Meantime the Kassai Company is prospecting extensively all over the country.

BRITISH WEST AFRICA—GAMBIA.

The quantity of gold and silver used in the industrial arts during the year ended December 31, 1919, is unknown. Silver coin is used for the bangles made and worn by the natives.

BRITISH WEST AFRICA—NIGERIA.

The silver coinage executed in Great Britain for Nigeria during the year ended December 31, 1920, amounted to £509,000 (\$2,477,049).

The amount of new gold bullion used in the industrial arts during 1920 was £7,800 (\$379,587).

The total import of United States gold bullion in 1920 amounted to £372 (\$1,810).

The quantity of gold produced from placer mining during the year ended Dec. 31, 1920, was 442 fine ounces, valued at £1,900 (\$9,246).

The stock of silver coin and paper money used for monetary purposes on December 31, 1920, was: Silver coin, £117,125 (\$569,989) in Government treasuries and £6,293,905 (\$30,629,289) in circulation; Government notes in circulation, £1,338,486 (\$6,513,742). In addition, there are notes in reserve to the amount of £3,899,103 (\$18,974,985).

There is no gold in circulation. The actual currency consists of currency notes, silver coins, nickel-bronze coins, also Manillas.

¹ In addition to the £5,800 a sum of £42,000 was held by the currency commissioners as part of the coin portion of the note guarantee fund. Sovereigns have since been demonetized in British East Africa.

² 55,760,000 rupees have been imported, but it is impossible to estimate how many have been taken back to India by individuals, have found their way into other parts of Africa, or are hoarded by natives in the reserves.

³ The only silver coined specially for East Africa is in 50 and 25 cent pieces. The figure given is the total received to Dec. 31, 1919. It is impossible to estimate what quantity has disappeared into other parts of Africa or is hoarded by natives.

⁴ The amount stated includes notes to the value of 11,423,880 rupees (\$3,705,907) held by the currency commissioners for issue as required. A number of Indian Government notes is also in circulation or held by merchants, but to what value can not be stated.

⁵ A small number of Bank of England £5 notes is known to be in this country, but the total value thereof can not be ascertained.

DECREE PERMITTING IMPORT OF GOLD.

[From bullion letter of Samuel Montagu & Co., London, Feb. 19, 1920.]

Gen. Allenby has issued a decree permitting the private import of gold into Egypt. The reason for the step was thus described by the Financial Adviser to the Egyptian Government: "Owing to the extravagant premium on gold, which amounts to 80 per cent, and which is causing a reaction in public confidence in the bank note currency, the restriction on the import of gold into Egypt, which was imposed during the war for special reasons, has been withdrawn."

THE EGYPTIAN BANKING SYSTEM.

[Commercial Attaché Alfred P. Dennis, London, Dec. 2, 1920, in Commerce Reports, Feb. 5, 1921.]

There is nothing in the Egyptian financial structure corresponding to the Bank of England or to the Federal Reserve System as a bankers' bank. The National Bank of Egypt holds Government balances and has the exclusive right to issue bank notes, but there is no central reserve system or any prescriptions governing the amount of reserves to be held, each institution deciding that for itself. In Egypt the banking field is free for all, with no discriminations whatever, either legal or fiscal, against foreign banks.

There are three distinct classes of banks: (1) Ordinary or deposit banks, accepting deposits and making loans on paper or approved collateral security, but not accepting land as security for loans; (2) one agricultural bank, established under Government auspices, which makes loans to farmers for buying seed or moving crops, etc., each amount not over 10 Egyptian pounds and for a period not exceeding 15 months, excepting that larger loans with longer maturities may sometimes be made for permanent improvements on agricultural land, such as buildings; (3) land banks which loan money on mortgage, obtaining their funds from the subscribed capital of stockholders.

The principal European nations are represented in banks of the first class, England, for example, having the Bank of Egypt and Anglo-Egyptian Bank; the French such important banks as the Credit Lyonnais, the Comptoir National d'Escompte de Paris, and the Credit Franco-Egyptian; while Italy is represented by the Banco di Roma, with fine new buildings in Cairo and Alexandria. Greece has the Bank of Athens and the Banque d'Orient; Turkey has a branch of the Imperial Ottoman Bank, and Belgium is represented by a strong credit institution. The Deutsche of German commercial relations with Egypt, has been liquidated.

ERITREA.

The amount of silver coin withdrawn from monetary use for industrial purposes during the year 1919 was 10,000 lire (\$1,930) domestic coin and 10,000 lire (\$1,930) Austrian coin.

FRENCH AND SPANISH MOROCCO.

Practically no gold or silver has been used in the industrial arts during the year ended December 31, 1920. No coinage executed in 1920.

On the 19th of March, 1920, the Sultan of Morocco issued a "dahir" demonetizing all hassani money in the zone corresponding to the French protectorate. This decree entered into force on March 20. The Moroccan coins, notes, silver and copper coins have been changed into notes of the Bank of France and of the Bank of Algeria. Be-

ginning from April 20th the demonetization has been complete and the Moroccan money has been replaced by the "franc" unit. In the Spanish zone the hassani continued to circulate as before, as the Sultan's decree imposed its demonetization only in the French zone. On November 20, 1920, the State Bank of Morocco commenced the emission of new notes in francs, in denominations of 5, 20, and 100 francs, but the total amount to which such notes have been issued is not declared.

Total notes	30,282,952	14,737,199

All gold coins held by the Government were shipped to England on September 25, 1920.

The standard coin was the Indian rupee. Fifty-five million seven hundred and sixty thousand rupees have been imported; but how many have been taken back to India by individuals, have found their way into other parts of Africa, or are hoarded by natives, it is impossible to estimate. The present standard coin of the country is the florin. The total received to December 31, 1920, is 2,937,000 florins and only 4,000,000 have been issued.

The florin and new 50 and 25 cent pieces are new coins minted on behalf of the East African Currency Board, London.

LAWS AFFECTING THE CURRENCY.

By the East Africa and Uganda (Currency) (No. 2) Order, 1920, the florin is the new standard coin of the country (fineness, 500; weight, 180 grains); the East Africa and Uganda (Currency) Orders, 1905 to 1918, and 1920, are, except as hereinafter provided, hereby revoked.

All coins (other than sovereigns) and all currency and other notes which are legal tender under the provisions of the said orders shall remain legal tender for the amount expressed therein at the rate of one rupee for one florin and one pound for ten florins unless and until declared not to be legal tender by proclamations made by the governors.

INDIAN CURRENCY IN EAST AFRICA.

[From S. A. Mining & Engineering Journal, Aug. 28, 1920.]

The Colonial Office announces: "In view of the fall in exchange value of the Indian rupee, which is for the present current in Eastern Africa at the rate of 2s. sterling, it has been found necessary to prohibit, with effect from 19th July, the importation of Indian coin and currency notes into the East African Protectorate, the Uganda Protectorate, and the Tanganyika Territory. Persons arriving in East Africa will be allowed to introduce a small amount of Indian currency for their personal use, the amount in each case to be determined by the customs authorities at the port of arrival at their discretion."

EAST AFRICAN CURRENCY.

[From the Statist, London, Apr. 16, 1921.]

In April, 1920, steps were initiated to replace the old coinage of Indian rupees by a new local currency, and to make Imperial currency notes and Bank of England notes legal tender side by side with the new currency. The exchange value of the rupee in February, 1920, touched 2s. 10d. It was proposed to stabilize the new currency unit, which may be referred to as the florin or rupee, at a new ratio of 2s. to the pound sterling after a transitional period in which the ratio would be successively 2s. 4d. and 2s. 2d. In practice it was found possible to dispense with the transitional period and an East African Currency Board was formed to buy and sell rupee sterling exchange on the basis of 2s. sterling for the rupee. . . . The effect of the alterations imposed was to place the currency of British East Africa on an altogether different basis from that of India, not a very wise step in view of the fact that the greater portion of the trade of Kenya, Uganda, and Tanganyika is with India. The effort to make effective India's legal ratio of 10 rupees to the pound sterling has been unsuccessful.

Conditions existing when these new measures were introduced afforded some justification for them. The effect of the new ratio would be to reduce the sterling value of the rupee. The previous high value formed a serious obstacle to the import of capital from the United Kingdom, from which the Colonies are chiefly financed, and it was thought that if the exchange could be stabilized and at the same time the rate were reduced this barrier to the development of the countries would be removed.

Subsequent events, however, proved the action of the Colonial Office to have been exceedingly ill-timed. The establishment of 2s. for the rupee proved in itself a new insurmountable obstacle in the path it was intended to clear. Far from facilitating the development of British East Africa, it has been one of the chief factors in bringing about the present stagnation.

LIBERIA.

British gold coins, which before the war frequently circulated in the country at the rate of 20 shillings to the pound sterling, have practically disappeared. They have been replaced by British silver and paper. There is no appreciable local demand for the gold pound as it may only be gotten at a premium ranging from 2 to 5 shillings in the pound.

NYASALAND PROTECTORATE.

The amount of domestic gold and silver coin withdrawn from monetary use for recoinage during the year ended December 31, 1920, was as follows: Gold, £5 (\$24); silver, £218 (\$1,061).

The amount of gold and silver coin in the Government Treasury on Dec. 31, 1920, was as follows: Gold, £120,000 (\$583,980); silver, £140,000 (\$681,310). There is practically no stock. All moneys are expected to be drawn on, and in case of urgency fresh supplies have to be imported from Great Britain. There is no paper money in circulation.

NORTHERN RHODESIA.

The quantity of gold and silver produced from the mines during the year ended December 31, 1919, was as follows: Gold (from deep mines), 224 fine ounces valued at £939 (\$4,570); silver (from copper ores, 8,591 fine ounces valued at £861 (\$4,190). English currency is used.

SOUTHERN RHODESIA.

The quantity of gold and silver produced from the mines during the year ended December 31, 1919, was as follows: Gold, 593,222 fine ounces, valued at £2,499,498 (\$12,163,807); silver, 172,000 fine ounces, valued at £34,099 (\$165,943).

The stock of gold and silver coin in the banks on December 31, 1919, was as follows: Gold coin, £214,982 (\$1,046,210); silver coin, £43,304 (\$210,739).

The actual currency is the British currency.

Premium on gold: Highest, £1 6s. 11½d. (\$6.56); lowest, 15s. 3¼d. (\$3.73); average, £1 1s. 1½d. (\$5.39) per ounce.

The value of the silver bullion and ore exported to the United Kingdom during the year ended December 31, 1919, was £960 (\$4,672).

No coinage was specially executed for Southern Rhodesia. The currency in circulation consists of British gold and silver coin and Union Bank notes.

The production of gold and silver from deep mines during the year ended December 31, 1920, was as follows: Gold, 552,498 fine ounces, valued at £3,056,549 (\$14,874,696); silver, 158,982 fine ounces, valued at £58,178 (\$283,123).

The totals of gold and silver coin held by the branches of the Standard Bank of South Africa in Southern Rhodesia on December 31, 1920, were as follows: Gold, £187,041 (\$910,235); silver, £18,363 (\$89,364). The total note circulation of this bank in Southern and Northern Rhodesia combined on December 31, 1920, was as follows: Apparent circulation, £541,373 (\$2,634,592); on hand at branches, £138,398 (\$673,514); actually in circulation, £402,975 (\$1,961,078).

The currency in Rhodesia is on a gold basis, but the export of gold coin is prohibited at present.

The import of gold and silver coin during 1920 was as follows: Gold, £4,746 (\$23,096); silver, £57,712 (\$280,855).

THE COMING OF THE NEW CURRENCY SYSTEM.—NEW ERA DATES FROM DECEMBER 17.—HOW THE NATIVES VIEW THE CHANGE.

[From The South African Mining and Engineering Journal, Johannesburg, Dec. 25, 1920.]

Although the new currency act of the Union came into force on December 17, the change has had as yet little outward visible effect. We have endeavored to ascertain in different quarters the reception likely to be accorded to the change, and it would seem that no very pronounced views are entertained. Most people regard the innovation passively, and it is too soon yet to gauge the attitude of the natives toward it. The following message was addressed by General Smuts to the natives in connection with the currency act:

"The natives of the Union, greetings. As Minister of Native Affairs, I wish to call the attention of the native people to the law which alters the form of our money. The Government is now putting this law into force. The gold coins will not circulate, but

will be kept in a bank, so that they can not be drawn away to distant lands. Slips of paper carefully made and printed will now be used in place of gold coins, and since the alteration may not be so easily understood by the natives as by the white people, I send this message in order that the native people may know that the change has been approved by the Government for the general advantage of the country. Let the natives be careful to learn the values of the paper money, which are easily recognized. This money will in all things serve the same purposes as the gold which has hitherto been used. It will pay taxes and buy cattle in the same way. Those who take it outside the Union will be able to change it for full value in the money of the land to which they go."

It appears that a number of natives employed at the Witbank colliery struck work last week on their being compelled to accept their wages in paper money. The mining authorities, it appears, had anticipated that greater notice would be given of the withdrawal of gold from circulation, and had purposed a certain amount of propaganda to prepare their natives for the change. As soon as it became evident on Saturday morning that the boys resented the alteration, matters were explained to them at length in the compounds, and they have since resumed work, so that further trouble, it is thought, is at an end.

Referring during the week at the meeting of the Chamber of Mines to the enforcement of the Currency and Banking Act, Mr. H. O. Buckle said it would be, of course, some time before its effects could be observed; but he was glad to say that the provision of additional silver, which he had suggested at the previous quarterly meeting, had been made, so that it would be possible to pay natives a considerable portion of their earnings in hard money.

CURRENCY AND BANKING REFORMS.

[From Commerce Reports, Feb. 14, 1921.]

In a recent issue the Statist (London, England) characterizes the South African currency and banking act, which came into operation on December 17, 1920, as "perhaps the most outstanding event in the financial history of the Union."

The measure, the necessity for which arose out of the situation created by the war, provides for two separate enactments, one relating to currency and the other to banking. The first, to be enforced only until June, 1923, empowers the Union Treasury to receive deposits of gold coin or bullion at the statutory mint price in exchange for gold certificates; these certificates to be legal tender and redeemable in gold on demand. When the market price of gold in the Union is above the mint price the Treasury may suspend specie payments and, at the same time, require the banks to surrender their holdings of the precious metal.

Concerning the second and more important part of the act, which provides for the establishment of a central reserve bank for the Union of South Africa, having for its objects the unified control of the note issue, of credit creations, and of metallic reserves, the Statist says:

"The directorate, comprising 11 members, is to be composed of men of proved experience in banking, commerce, industry, and agriculture, who are to have no interest in any other financial concern and to be independent of political parties. The original capital is to be £1,000,000, of which 50 per cent is to be taken up by already existing banks in the Union in proportion to their respective paid-up capitals and reserve funds. The remaining 50 per cent is to be offered for subscription to the general public. The reserve bank may establish branches in any part of the Union and, with the consent of the Treasury, outside the Union; it may act as bankers and financial agents of the Government, and it will have the power to fix discount rates. For a period of 25 years it will have the sole right of issuing notes within the Union; the other banks being allowed to continue issuing notes, backed by a minimum gold reserve of 40 per cent, until the new institution takes control. Its other powers are the same as those enjoyed by ordinary joint-stock banks, with a few exceptions. Briefly, these exceptions are: It is debarred from receiving time deposits; it may not draw or accept bills payable otherwise than on demand; the usance on bills of exchange and promissory notes in which it deals is limited to 90 days, except in the case of bills arising out of agricultural operations, when the limit is six months. Dealings in the latter class of paper are limited to 20 per cent of the bank's total advances. The regulations as to reserves are very stringent. The Central Bank must keep a

reserve in gold to a minimum of 40 per cent against its note issue, the remainder being secured by commercial bills, and, in addition, by a fixed charge on all the assets of the bank. Besides this, it must keep a gold reserve against deposits and bills payable to a minimum of 40 per cent. All the other banks transacting business in the Union are required to keep a reserve balance at the Central Institution equal to at least 10 per cent of their demand deposits (to be raised to 13 per cent three years from the coming

into operation of the act), and 30 per cent of their time deposits. Monthly statements must be published by all banks.[¶]

TO BUILD MINT IN PRETORIA.

[From Bankers Magazine, New York, November, 1920.]

The British Government has decided to proceed at once with the original plans for the construction of a mint at Pretoria, South Africa, and will not build it upon a smaller scale, as was for a time considered, according to the local press. There is at present no mint in that country, and because of exchange difficulties gold coin has practically disappeared from circulation, it is stated.

The original plans for the mint, which it is expected will be opened some time in 1924, provide for a capacity of 40,000,000 gold pieces and 7,500,000 other coins. It is expected that it will be one of the most important establishments of its kind in the Empire.

Gold movements.

[From The Australasian Insurance and Banking Record, Melbourne, Feb. 21, 1921.]

The gold production of the Commonwealth for 1920 amounted approximately to 943,692 ounces fine, of the value of £4,008,545. The returns of the three branches of the Royal Mint at Sydney, Melbourne, and Perth show receipts amounting to £4,036,384, inclusive of a small quantity of gold from external sources, the amount received at Sydney being £646,883; Melbourne, £799,573; and Perth, £2,589,928.

During 1920 the exports of gold from Australia amounted to £4,240,197, and imports to £23,718, leaving net exports £4,216,479.

GOLD CURRENCY.

[Consul General Thomas Sammons, Melbourne, Dec. 22, 1920.]

In response to a questionnaire forwarded to the Department of the Treasury, Commonwealth of Australia, the following information has been furnished.

Permission is given to the Gold Producers' Association to export from Australia all gold won by its members. As membership is open to all bona fide gold producers, this concession means that practically the whole of the gold output is now being exported. Further, travelers abroad are permitted to take a limited amount of gold from Australia, and, with these exceptions, the export of gold is absolutely prohibited.

The note issues of the several trading banks have disappeared from circulation, and the only note issue is that of the Commonwealth Treasury, which is legal tender. It will thus be seen that for ordinary trading purposes the sovereign is of no greater purchasing value than the Treasury note.

1. Gold coin has disappeared from circulation. Australia's gold holdings are held partly by the banks as portion of their reserves and by the Treasury as a reserve against the note issue. There is no evidence of hoarding of gold by the people.

2. Gold is sold to jewelers and others by the several branches of the Royal Mint. Prior to March 23, 1920, the gold was sold at the mint par, viz., £3 17s. 10½d. per ounce standard. After the date mentioned the price was based on the world's price for gold. The rate is fixed every six months and is based on the average world's price for the previous six months. Since March 23, 1920, the gold sold by the mints is deemed to have been gold the property of the Gold Producers' Association, and

to that extent the amount available for export is reduced. As previously explained, the note issue being legal tender, the method of payment, whether by silver or paper currency, does not affect the price.

3. Owing to the restrictions on the export of gold previously referred to, the \$10 gold eagle is only worth its bullion value at £3 17s. 10½d. per ounce standard. This works out at a little over £2 1s., less a small deduction for minting charges.

4. The value in Australia of the United States paper dollar (Federal Reserve note) varies from day to day with the New York-London conversion rate. To-day dollar bills would be purchased by banks at about 5s. 8d., which includes a premium of 7s. 6d. per cent, being the buying price of demand drafts on London.

5. The banks may possibly provide favored clients, who propose traveling abroad, with small quantities of gold. With this exception, gold is not paid out by banks. Any gold issued by the banks is issued at sterling and not at bullion value.

6. Commonwealth Treasury notes are redeemable on demand at the Commonwealth Treasury at the seat of Government. In actual practice, little or no demand is made for such redemptions.

7. The highest price charged for gold issued in accordance with the arrangements set out under the answer to question number two, is that existing at the present time, viz., £4 18s. 1½d. per ounce standard, which includes a premium of £1 0s. 3d.

According to an official statement issued by the Treasury Department, the Australian note issue on October 27, 1920, amounted to £54,172,965, against which the Treasury holds a gold reserve of £23,312,954, representing 43.03 per cent of the notes in circulation.

AUSTRALIAN EXCHANGE.

[From Bankers Magazine, London, December, 1920.]

Australia was the last of the great markets for British exports to exhibit signs of becoming "clogged" through the inability of the exchange banks to finance further exports, but when restriction came it did so very suddenly. The situation is complicated by the huge transactions which had taken place during and since the war between the British and Australian Governments with regard to wool and wheat shipments, as the result of which the funds available in London on Australian account became concentrated in the hands of the institution which plays the dual rôle of a state banking institution and a competitor of the ordinary banks—namely, the Commonwealth Bank. Consequently, the other banks have been unable to acquire the necessary London funds for the purpose of financing trade to Australia pending the shipment of new seasons produce, the disposal of which is likely to be hampered by the congestion of English markets. To make matters worse the independent banks are prohibited by the Australian Government from shipping gold to London in order to help the situation.

NEW ZEALAND.

The quantity of gold and silver produced from the mines during the year ended December 31, 1919, was as follows: Gold, 222,063 fine ounces, valued at £923,095 (\$4,492,242); silver, 453,567 fine ounces, valued at £103,037 (\$501,430).

NOTE ISSUE AND PRODUCTION OF GOLD AND SILVER.

[From New Zealand Official Yearbook, 1920.]

On August 5, 1914, an amendment to the banking act was passed empowering the governor general in council, from time to time, to make proclamation declaring bank notes to be legal tender within New Zealand.

Immediately on the passing of the amendment referred to, a proclamation was gazetted declaring notes of all six banks of issue doing business in New Zealand to be legal tender from August 6 to September 6, 1914. Further extensions for short periods were made from time to time until the end of 1917, when the notes of the six banks were declared legal tender until December 31, 1922.

The production of gold and silver during the year ended December 31, 1920, was as follows: From placer mining, 23,528 fine ounces, valued at £112,449 (\$547,233); from dry ores, 451,122 fine ounces, valued at £415,868 (\$2,023,822).

Approximate stock of gold and silver used for monetary purposes, also of paper money, on Dec. 31, 1920.

Character of stock.	In banks.	In circulation.
	£	£
Gold, silver, and other coined metal.....	7,527,738	
Gold and silver bullion.....	129,353

TAHITI—SOCIETY ISLANDS.

BANKING—CIRCULATING MEDIUM.

[Consul Howard F. Withey, Tahiti, in Commerce Report, Jan. 21, 1921.]

With the exception of one small private bank at Papeete, the only bank of the colony is the local branch of the Banque de l'Indo-Chine. This is a bank of deposit, discount, and issue. Its note issues constitute virtually the sole circulating medium of exchange of the colony except for small notes issued under the credit of the local chamber of commerce in denominations of less than 5 francs and designed to fill local needs. There is no specie in circulation in the colony except in inconsequential amounts. Silver disappeared from circulation by the late fall of 1919, and for the most part is locked up in vaults and strong boxes, and some of it has found its way out of the colony. Before the recent issue of the chamber of commerce notes the requirements for small change were met by the issuance by anyone so disposed of small tickets of varying denominations, which tickets passed readily from hand to hand where issued by a local trading house or merchant. Ordinary business cards, upon which had been written the French equivalent of "good for one franc," etc., and without signature or stamp, were frequently met with circulating as currency.

AT THE CLOSE OF THE YEARS 1919 AND 1920.

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coin as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted to bullion.

Monetary stock of principal countries of the world, end of calendar year 1919. (See text, p. 273.)

¹ Average price per ounce, 1,000 fine, of bar silver in New York.

Production of gold and silver in the world since the discovery of America.

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint.]

Period.	Gold.		Silver.		Percentage of production.	
	Annual average for period.		Total for period.		By weight.	
	Fine ounces.	Value.	Fine ounces.	Coining value.	Gold.	Silver.

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS
OF THE MINT SERVICE FOR THE
FISCAL YEAR 1919

REPORT OF THE DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 2, 1919.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1919, being the forty-seventh annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1918.

OPERATIONS OF THE MINTS AND ASSAY OFFICES.

COIN DEMAND.

During the fiscal year 1919 the demand for coin of denominations below the dollar continued to be very large, as compared with the period before the war. The demand for one-cent pieces was the largest ever known and our presses were run 24 hours a day on this coin for months. Over 1,600 tons (of 2,000 pounds), or 466,839,600 one-cent pieces, were issued by the mints during the year. Of this number approximately 158 millions were issued in May and June, and the unusually large demand was still unsatisfied. This demand was doubtless due principally to putting into effect, April 1, 1919, of certain internal revenue taxes. The domestic coinage of 434,028,458 pieces has been exceeded only by the coinage for the preceding year, and the coinage for foreign Governments amounted to 103,114,195 pieces, as compared with 32,748,341 pieces during 1918.

SILVER DOLLARS CONVERTED TO BULLION.

The melting of silver dollars for use as bullion was continued through nearly the entire fiscal year, the operation incident to sale of 200,000,000 fine ounces of dollar silver to the Government of Great Britain for use by the Government of India being completed in May, 1919. Over 191,000,000 dollars were melted during the year, giving total converted to bullion under the act of April 23, 1918, of 260,121,554 silver dollars. This total includes 1,000,000 dollars allocated to the Director of the Mint for use in making subsidiary silver coin.

NEW ASSAY OFFICE BUILDING AT NEW YORK.

An event of the year of more than passing importance to the Mint Service was the commencement of work on the new assay office building at New York. The work of the office has been hampered for many

years by inadequate and unsuitable quarters, but it is expected that by the close of another fiscal year the office will be suitably housed, with adequate storage vaults for the large values there kept.

PLATINUM.

Platinum work—its purchase, refining, and manufacture into various shapes for the War Department—continued to be an important feature at the New York Assay Office during most of the fiscal year. The technically and practically difficult task of originating and operating assaying and refining processes for platinum and allied metals begun in the prior fiscal year was finished this year with results which reflect great credit on the staff of the institution.

Deposits received numbered 3,095, while 17,390 assays were made on platinum metals. The following table gives in round figures details of operations on platinum deposits:

Items.	Received.	Refined (including prior deposits).	Delivered on War De- partment orders.	Sold on War De- partment orders.
	<i>Fine oz.</i>	<i>Fine oz.</i>	<i>Fine oz.</i>	<i>Fine oz.</i>
Platinum.....	23,880	54,673	27,941	1,678
Palladium.....	355	745	19	82
Iridium.....	322	1,053	276	221
Osmiridium.....	232			
Gold.....	1,014	1,498		

There are considerable balances of the above-named metals still on hand, including manufactured articles containing about 5,000 ounces.

REFINERIES.

The Mint Service refinery output of fine gold and silver was again large, the stock of unrefined bullion at the close of the year having been reduced, as compared with the prior year, by about 26½ per cent.

MINOR COINAGE METAL FUND INCREASED.

The minor coinage metal fund, a revolving fund for the purchase of metal from which to make nickel and bronze coins, was increased by act of Congress approved December 2, 1918, from \$200,000 to \$400,000. This increase became necessary by reason of the large quantities of metal in process at the three coinage mints, due to the extraordinary demand for minor coin, and by the high prices of metals used, in order that dealers might receive prompt payment for the metal furnished.

INSTITUTIONS OF THE MINT SERVICE.

The Mint Service institutions operated during the fiscal year were: Coinage mints at Philadelphia, San Francisco, and Denver; assay office, at New York, which has a large trade in bars of fine gold and silver; mints at New Orleans and Carson City conducted as assay offices, and assay offices at Seattle, Boise, Helena, Salt Lake City, and Deadwood, these being bullion-purchasing agencies for the large institutions. Refineries were operated at the New York, Denver, and San Francisco institutions.

DEPOSITS OF GOLD AND SILVER.

The deposits of gold and silver during the past year have been fewer in number than for several preceding years. However, the values have not fallen off in proportion to the number of individual deposits. The principal reason for the reduction, aside from the reversal of the large import movement of the war years, is doubtless to be found in the adverse effect on small producers of increased costs of production without correspondingly increased returns on product. The price of gold remains constant at \$20.67 per fine ounce; and while the price of silver in the United States was established at \$1 per fine ounce during the entire year, the increase over prewar silver prices apparently was insufficient to materially affect the output.

MINOR ASSAY OFFICES.

The need of increased appropriations for the minor assay offices is again strongly urged. By reason of lack of expense funds the offices are unable to accept business available to them, and even before the cost of living began to soar the officers in charge were inadequately paid for the responsibilities devolving upon them.

At the Carson City Mint there was again a material gain over the preceding year in weight and value of metal handled. The increased volume of work at this institution is very pronounced, as well as exceptional, and is readily perceived from the following comparative table:

Items.	1919	1918	1917
Metal handled.....troy ounces..	244, 215	151, 061	17, 057
Gold value.....	\$335, 866	\$270, 831	\$197, 010
Silver value.....	\$202, 788	\$115, 719	\$3, 669
Number of deposits.....	424	468	419

This institution is much in need of additional help.

The New Orleans Mint was relieved during the year of the custody of 22,475,000 silver dollars stored there for many years; 22,400,000 were transferred to the Philadelphia and San Francisco Mints, and melted in connection with sale of silver to the British Government under the act of April 23, 1918, while the balance of 75,000 were transferred to the New Orleans subtreasury.

GOLD OPERATIONS.

The value of the gold acquired by the Government at the mints and assay offices during the fiscal year 1919 was \$126,841,719.19. United States gold coin received for recoinage was of value \$24,521,644.12; transfers of gold between Mint Service offices totaled \$8,978,669.39; making an aggregate of gold handled by the Mint Service during the fiscal year 1919 of \$160,342,032.70.

SILVER OPERATIONS.

Silver purchased during the fiscal year 1919 totaled 9,122,029.99 fine ounces, costing \$9,120,806.80, at an average price of \$1.00 — per fine ounce; the silver received and repaid to the depositors thereof in bars bearing the Government stamp totaled 439,387.63 fine ounces; the United States silver coin received for recoinage totaled 456,831.78 fine ounces, with recoinage value of \$631,528.29; silver dollars aggre-

gating 116,538,397.85 fine ounces, having a face value of \$151,569,000, were received from other Treasury offices for melting; Philippine silver coins received for recoinage totaled 617,755 fine ounces; silver deposited in trust by other Governments totaled 724,962.41 fine ounces; the transfers of silver between Mint Service offices totaled 3,081,897.57 fine ounces; making an aggregate quantity of silver handled by the Mint Service during the fiscal year 1919 of 130,981,262.23 fine ounces. This is about two and two-thirds times the quantity handled last year, the large increase being due to the melting of silver dollars.

COINAGE.

The domestic coinage of the fiscal year 1919 was of value \$19,570,657, namely, \$14,682,079 subsidiary silver, \$1,457,875 nickel, and \$3,430,703 bronze coin. No gold domestic coin was made.

The coinage other than domestic included 29,195 gold £1 blanks for Peru, 13,750,000 nickel pieces and 7,000,000 bronze pieces for Peru, 47,595,000 nickel pieces for Argentina, 100,000 nickel pieces and 750,000 bronze pieces for Nicaragua, and 13,175,000 bronze pieces for Siam, all made at the Philadelphia Mint; also Philippine coin made at the San Francisco Mint consisting of 11,115,000 silver pieces, 2,000,000 nickel places, and 7,600,000 bronze pieces.

The seigniorage on United States coinage executed totaled \$8,369,971.01, of which \$4,233,193.43 was on subsidiary silver coins and \$4,136,777.58 was on nickel and bronze coins.

STOCK OF COIN AND BULLION IN THE UNITED STATES.

On June 30, 1919, the estimated stock of domestic coin in the United States was \$1,773,839,984, of which \$1,222,823,787 was gold, \$308,145,759 was silver dollar coin, and \$242,870,438 was subsidiary silver coin.

The stock of gold bullion in the mints and assay offices on the same date was valued at \$1,802,850,973.72, an increase over last year of \$64,291,821.57, and the stock of silver bullion was 17,486,379.70 fine ounces, an increase over last year of 2,590,468.91 fine ounces.

PRODUCTION OF GOLD AND SILVER.

The production of gold and silver in the United States during the calendar year 1918 was as follows: Gold, \$68,646,700; and silver, 67,810,139 fine ounces.

INDUSTRIAL ARTS CONSUMPTION.

The amount of gold consumed in the industrial arts during the calendar year 1918 was \$52,409,740, of which \$32,892,395 was new material. Silver consumed amounted to 36,252,596 fine ounces, of which 26,722,333 fine ounces were new material.

EXPORT OF GOLD COIN.

The net export of United States gold coin for the fiscal year ended June 30, 1919, was \$85,625,872.

ESTIMATES FOR THE FISCAL YEAR 1921.

Total appropriation estimates for the Mint Service for the fiscal year 1921, including the office of the Director of the Mint, amount to \$1,845,030. The appropriations for the year 1920 amount to \$1,695,280.

APPROPRIATIONS, EXPENSES, AND INCOME.

The appropriated amounts available for Mint Service use during the fiscal year 1919 totaled \$1,778,420.38; reimbursements to appropriations for services rendered amounted to \$522,626.43; making an available total of \$2,301,046.81.

The expenses chargeable to appropriations were \$2,070,052.64; those chargeable to income \$74,360.51; total, \$2,144,413.15.

The income realized by the Treasury from the Mint Service totaled \$11,849,583.21, of which \$8,371,202.33 was seigniorage and \$2,516,425.05 was received for melting silver dollars.

PHILIPPINE MINT EQUIPMENT.

Complete coining equipment, to be electrically operated, for installation in the mint shortly to be established at Manila, P. I., has been constructed at the Philadelphia Mint. This machinery consists of 2 coining presses, 2 rolling mills, 1 cutting press, 1 topping machine, 1 strip shear, 1 upsetting machine, 2 tumbling barrels, 1 coin-revolving machine, 1 automatic weighing machine, 1 six-foot bullion balance, 4 hand balances, 1 rotary annealing furnace, 6 oil melting furnaces, 5 sets of punches and beds, 5 ingot molds, and all accessories necessary to complete the installation for the coinage of silver, nickel and bronze.

The coining presses were built from patterns acquired and are the first coining presses ever built in any mint in the United States. They, as well as all of the machinery mentioned, have been thoroughly and successfully tested. The manufacture of this machinery demonstrates that the machine shop of the Philadelphia Mint is fully equipped for and capable of taking care of all machinery requirements of the Mint Service. During the past year the shop has been taxed to its capacity.

ADDITIONS AND IMPROVEMENTS.

PHILADELPHIA MINT IMPROVEMENTS.

Improvements are under way at the Philadelphia Mint which, when completed, will effect very materially increased economies in operations.

The break-down rolling capacity will be increased 33½ per cent by the addition of one 16-inch roll, now under construction.

A conveyor system is under construction and will soon be installed in this institution. Under this conveyor system hand trucking of metal between departments will be eliminated. The conveyors will be arranged so that ingots will be transported approximately 500 feet from the melting room to the break-down rolling division and the broken-down ingots or strips will in like manner be delivered to the finish-rolling division. The machinery in this department has been arranged to reduce labor costs about 60 per cent. The blanks from the cutting presses will be delivered by a bucket conveyor to the annealing furnace room, where they will be deposited in elevated bins. From these bins the blanks will be distributed to the annealing furnaces through tubes controlled by automatic valves so arranged that they will discharge when opened only the quantity of blanks required for one furnace charge. After blanks have passed through the annealing furnaces they will be dumped into colanders, which

will be picked up by electric cranes or hoists and transported to the tumbling barrels for cleaning. When the blanks are cleaned they will be dumped directly into the coin dryer. It is estimated that a labor saving of 40 per cent will be accomplished in this room through the use of the improved appliances and improved methods, as it has been customary in the past to handle all blanks with hand scoops.

After the annealing and cleaning processes are completed the coin blanks will be deposited in bins located near the drying machine, from which they will be carried by a second conveyor to the selecting room and deposited in upright tubes over each selecting table. From these tubes the blanks will be discharged automatically as needed by the reviewers. Any surplus of blanks in this room will be stored in elevated bins. Under the conveyor system and other new methods we are adopting all trucking of blanks from the time they leave the cutting machines until ready for upsetting operations will be eliminated. A considerable saving of labor will be effected in this department by reason of these improvements.

Raw materials will also be unloaded and stored by use of conveyors.

Baling punched strips by machinery for the past eight months has been demonstrated to be economical and successful. An improved machine of the type now in use is in process of construction to replace the older model referred to in my report for the last fiscal year.

Under the present system of weighing minor coinage ingots and clippings considerable labor is involved. Ingots are placed upon trucks in the melting room and taken to the transfer weigh room, where they are passed over balances in drafts of about 10,000 ounces each, replaced upon trucks and taken to the break-down rolls; clippings are similarly handled for weighing. One handling of the minor coinage metal is to be eliminated by the new system being installed, as all weighing of minor coinage ingots and clippings will be in large drafts and on specially constructed platform scales located in the break-down rolling room for ingots, and another near the baling machine for weighing the baled clippings.

During the past two years melting silver, nickel, and bronze by electricity has demonstrated that it is economical and saves labor. The first furnace installed has been replaced with a new 1,000-pound furnace and an additional unit of 2,000 pounds capacity is now being installed. These furnaces are both of the Rennerfelt type with automatic side electrode feeds and tilting devices.

Four induction electric furnaces of the Northrup type have also been contracted for to be installed in the deposit melting room. This type of furnace, after thorough investigation and demonstration, seems to be the best adapted and most modern furnace for deposit melting on the market.

The melting of silver dollars and casting into 1,000-ounce bars for export continued until April 23, 1919. The rate of melting averaged about \$800,000 per diem of 24 hours, and of this the Rennerfelt electric furnace steadily turned out \$306,000 each day, the furnace making 18 heats of 17 bags to each heat, or 18,000 pounds of dollars per 24 hours. The performance of this electric furnace in melting silver dollars showed that its melting capacity was equivalent to 3.77 gas furnaces as used here. From start to finish of the operation of the electric furnace on silver coin a total of 3,191 heats were made on the same lining and roof. The total number of tons of silver coin melted in furnace amounted to 1,585.18, or 3,170,369.86 pounds.

The power consumption to melt this quantity of metal amounted to 177.36 kilowatts per ton. This figures a fuel cost of $10\frac{1}{2}$ cents per 1,000 ounces of metal melted, which is over 50 per cent better than our present performance on gas furnaces.

The losses from melting silver in this furnace and pouring into 1,000-ounce bars appear to be, approximately, 0.1 ounce per 1,000, which is considerably better than we show on crucible melting. This is due to the fact that the furnace construction and absence of flue prevent metal from going up the chimney, and, too, the method of pouring is cleaner and fewer mechanical losses are suffered.

On February 9, 1919, the new 1,000-pound Rennerfelt furnace was put in operation on cupro nickel. After making 286 melts of this alloy, and 1 melt of pure copper for cleaning furnace of traces of nickel, bronze was melted therein until 445 heats were taken out. The furnace was then shut down after running 732 heats, it being decided not to operate again until the equipment of both furnaces was in working order. This furnace has a capacity of 1,200 pounds and is an improvement on the first, having electric control for tilting, automatic electric feed for side electrodes, and being carried in bearings so as to have the axis of tilt in line with pouring lip. This latter feature enables careful and precise pouring direct from furnace. An electric motor controller, similar to those in use on trolley cars, controls current to an electric motor geared to a hoisting winch, which enables the furnace to be lifted and the stream of molten metal to be regulated with considerable precision. This furnace and the 1-ton furnace will both be so hung in their bearings as to theoretically pour at center of axis of support. However, granting that the precision for pouring direct is present—and this was demonstrated by about one week's practice—the conclusion has been reached that it is more practical and that better ingots can be made by pouring into a ladle. This we are doing at present, using two 200-pound ladles. These ladles are placed on a car under spout, filled, and car is rolled on track until molds are reached. The ladle is then lifted in shank and hung in bail, which is itself hung on hoist above molds. The position of hoist is permanent, the molds being on a turntable. The molds are then poured one by one. We expect to develop a more rapid way of clearing the furnace of charge, and we have in mind both larger ingots and pouring two simultaneously.

The automatic electrode feed control is a decided improvement, both for the reason that it practically maintains the arc at proper length without the attention of operator, thus improving power factor, and because it also prevents breakage of electrodes by stabilizing arc without any chance of feeding electrodes into one another. Electrodes are purchased with blank ends and threaded in the machine shop here. The machining of inside and outside threads removes, approximately, 9.3 per cent of the electrodes. The consumption of electrodes will vary from $2\frac{1}{2}$ to 4 pounds per ton of metal melted, depending upon character of charge.

A magnetic separator has been purchased for the sweeps cellar. This will remove practically all particles of iron, which at times run as high as 25 per cent, from sweep cellar grains. This will not only result in a considerable saving of fuel, acid, etc., but reduces the liability to an negligible quantity of iron being introduced into our minor coinage metals.

DENVER MINT IMPROVEMENTS.

During the past fiscal year a coining press has been received from the New Orleans Mint and installed, giving a total of six presses. This press required considerable repair work, but will be in operating condition at an early date. The space occupied by the refinery has been increased by an additional room.

NEW YORK ASSAY OFFICE IMPROVEMENTS.

Some modification in the shape of the nichrome muffles used in the assay furnaces has been made and there is now one muffle which was put in use seven months ago, three eight months ago, and one over nine months ago, all being still in good condition and apparently capable of considerable more service. When the bottoms commence to sag they are heated and hammered back into shape. They are proving a decided improvement over the usual fire-clay muffles.

INCOME AND EXPENSES OF THE FISCAL YEAR 1919.

INCOME.

Earnings:

Credited to appropriations—

Charges on foreign coinage executed.....	\$326, 726. 18
Charges for manufacture of special medals.....	4, 489. 33
Charges for work done for other institutions, etc.....	42, 060. 17
Charges for melting silver dollars..	149, 350. 75

Total earnings credited to

appropriations.....

\$522, 626. 43

Credited to revenues—

Mint charges on bullion.....	299, 204. 06
Proceeds of medals and proof coins sold.....	4, 408. 93
Receipts from special assays of bullion and ores.....	3, 127. 00
Charges on silver-dollar bullion sold.....	2, 516, 425. 05

Total earnings credited to

revenues.....

2, 823, 165. 04

Total earnings.....

\$3, 345, 791. 47

Profits:

Gain on bullion shipment

to refineries.....	\$3, 129. 33
Less contra losses.....	590. 02

2, 539. 31

Surplus bullion recovered.....

123, 694. 27

Proceeds of sale by products (platinum, etc.).....

2, 998. 24

Proceeds of sale of old materials.....

3, 344. 11

Excess cash.....

12. 26

Commission on telephone calls.....

1. 22

Total profits other than seigniorage.....

132, 589. 41

Seigniorage on subsidiary silver coinage.....

4, 233, 193. 43

Seigniorage on minor coinage—

Nickel..... 1, 233, 358. 10

Bronze..... 2, 904, 650. 80

Total seigniorage.....

8, 371, 202. 33

Total profits.....

8, 503, 791. 74

Total income.....

11, 849, 583. 21

OPERATIONS OF THE MINT SERVICE.

15

EXPENSES.

Chargeable to appropriations:

Compensation of employees—

Mint Bureau, salaries appropriation.....	\$23, 645. 00
Mint Bureau, increase compensation appropriation.....	1, 317. 00
Mints and assay offices, salaries, appropriations.....	240, 882. 37
Mints and assay offices, wages appropriations....	1, 110, 476. 70
Mints and assay offices, increase compensation appropriation.....	106, 169. 71

Total compensation of employees..... \$1, 482, 490. 78

Equipment, stores, and other expenses—

Mint Bureau, contingent appropriation.....	5, 044. 19
Mints and assay offices, contingent and permanent appropriations (including \$8,406.60 wastage of gold and silver in operative departments, and \$9,535.79 loss on assay value of operative sweeps sold).....	574, 237. 91
Transportation of bullion and coin between mints and assay offices, freight appropriation..	8, 279. 76

Total miscellaneous expenses chargeable to appropriations..... 587, 561. 86

Total expenses chargeable to appropriations..... 2, 070, 052. 64

Chargeable to revenue:

Seigniorage on minor coinage—

Expenses of distributing minor coin to Treasury offices.....	69, 002. 35
Wastage of minor metals in operative departments.....	5, 358. 16

Total chargeable to revenue..... 74, 360. 51

Total expenses..... 2, 144, 413. 15

Net income of the Government from the mint service..... 9, 705, 170. 06

Total..... 11, 849, 583. 21

DEPOSITS, INCOME, EXPENSES, AND EMPLOYEES, BY INSTITUTIONS, FISCAL YEAR 1919.

The number and value of deposits, the income (including seigniorage), the expenses of the fiscal year 1919, and the number of employees on June 30, 1919, at each institution follows:

Institution.	Number of—		United States coining value of gold and silver received at each institution.	Income.	Expenses from appropriations. ¹	Transportation of bullion and coin.	Employees June 30, 1919.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1919.

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints, and assay office at New York, during the fiscal year ended June 30, 1919, was 11.1 million fine ounces of gold and 47 million fine ounces of silver. There were also operated upon at the coinage mints 164 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015. Coiner—gold, 0.0005; silver, 0.001.

ENGRAVING DEPARTMENT.

The engraving department at the Philadelphia mint has been unusually busy during the past year. This department supplied the three coinage mints all of the dies used for domestic coinage, supplied master dies and hubs for foreign coin, embossed envelopes dies for the Post Office Department, Treasury seals, and medal dies.

A total of 31,518 medals of national character were manufactured. Included in that number were 7,800 distinguished-service crosses and 2,000 distinguished-service medals for the War Department. Because of the special shape and design of the distinguished-service crosses it was necessary to saw-pierce, enamel, color and finish each one by hand.

Dies for the war crosses and medals were engraved at this mint under the supervision of the War Department.

There were also manufactured for the War and Navy Departments 10,000 Mexican service medals and over 3,000 gold and silver marksmanship medals, besides several thousand Cuban occupation, Cuban pacification, Spanish War, Philippine War, Porto Rican occupation, and the West Indian campaign medals.

For the first time the engraving department was called upon to engrave dies for the insignia and collar ornaments for officers and enlisted men. Samples of these dies were made and used by the War Department in procuring bids for the millions of insignia required for the various branches of the service.

The engraving department manufactured 5,807 dies during the year, which number includes all dies used at the other mints, as well as dies for foreign coinage and medals of a national character.

MEDALS SOLD.

Medals manufactured at the Philadelphia Mint were sold during the fiscal year 1919, as below:

Items.	Pieces.	Value.
Gold medals.....	181	\$6,474.00
Silver medals.....	3,068	1,910.32
Bronze medals.....	28,269	27,468.52
Total.....	31,518	33,852.84

THE PROGRESS OF THE NUMISMATIC COLLECTION.

Accessions to the collection for the past year have consisted of medals pertaining to the World War, military and civilian decorations, and a comparatively small number of coins.

The acquisitions by purchase have been chiefly medals pertaining to the World War, of which nearly 250 have been secured. The collection now possesses medals commemorating practically every event of the long and varied struggle; and quite important historically is the large number of these medals which disclose the reaction in the country of their origin to important events of the war, and also public opinion of the policies and activities of enemy statesmen.

The military and civilian decorations acquired are specially distinguished by a splendid gift from the French Government. This consists of the complete series of the Legion of Honor medals—The Grand Cross, The Grand Officer, The Commander, The Officer and The Chevalier, of the Medaille Militaire, and a series of four Croix de Guerre showing the various citations; in all, 12 beautiful medals. In cordial appreciation of the fine courtesy of the French Government, these medals have been placed on exhibition prominently in one of the large wall cases, where they have become one of the chief attractions of the cabinet.

EMPLOYEES.

The total number of persons employed in the institutions of the Mint Service on June 30, 1919, was 992.

The number of employees in each of the various departments of the principal institutions is given below:

NUMBER OF EMPLOYEES. BY DEPARTMENTS.

Institution.	General.	Engraving.	Assaying.	Coining.	Melting and refining.	Total
Philadelphia Mint.....	167	15	11	249	96	538
San Francisco Mint.....	74		12	46	52	184
Denver Mint.....	38		8	19	27	92
New York Assay Office.....	76		18		36	130
Total.....	355	15	49	314	211	944

VISITORS.

Comparatively few visitors were admitted to the mints during the year, as the war ban was not lifted until near its close. As before the war, many thousands of persons will doubtless in future visit the mints annually to observe their operations.

WORK OF THE MINOR ASSAY OFFICES.

The following table exhibits the principal work of the minor assay offices during the fiscal year 1919:

ORE ASSAYS.

A comparative statement of ore assays made at the minor assay offices since 1915, shows increased use of our facilities by the mining industry as the result of reducing our charge for this service to a nominal sum. The reduction in number of ore assays in the past two years is probably due to the adverse effect on prospecting, and on small producers of increased costs without corresponding increase in returns on gold bullion, the price of which remains constant at \$20.67 + per fine ounce.

Fiscal year.	Ore assays made.	Amount of charges collected.

LABORATORY OF THE BUREAU OF THE MINT.

From the domestic coinage of the calendar year 1918 the assayer of this bureau tested 1,080 silver coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of silver coins above standard (the limit being 3 above or below) was 3, while the greatest deviation below was 2.4.

The following table summarizes the silver coins:

Fineness.	Number of silver coins.			
	Philadel- phia.	San Fran- cisco.	Denver.	Total.

One hundred and thirty-two Philippine coins were examined, all of which were within the legal requirements.

The work of testing certificate bar assaying throughout the service was continued and so far advanced that a conference of assayers on the subject is being arranged for in 1919.

PROCEEDINGS OF THE ASSAY COMMISSION, 1919.

The following-named gentlemen were designated by the President as commissioners to examine and test the weight and fineness of the coins reserved at the several mints during the calendar year 1918, pursuant to the provisions of section 3547 of the Revised Statutes of the United States: Hon. George P. Darrow, M. C.; Mr. Joseph A. Riordan, Harrison, N. J.; Mr. George Burnham, Philadelphia, Pa.; Mr. C. L. McCracken, Johnstown, Ohio; Mr. Calvin Page, Portsmouth, N. H.; Mr. G. E. Vaughan, Lynchburg, Va.; Maj. Louis Fischer, Washington, D. C.; Mr. George P. Merrill, Washington, D. C.; Mr. Herbert Adams, New York, N. Y.; Mr. E. T. Newell, New York, N. Y.; Mr. R. L. Ailworth, Eastville, Va.; Capt. Isaac Emerson, Baltimore, Md.; Mr. John W. Heck, Jersey City, N. J.; Hon. M. F. Phelan, M. C.; Hon. William A. Ashbrook, M. C.; Mr. Vail Pittman, Tonopah, Nev.; Mr. Richard P. Morris, Salt Lake City, Utah; Mr. John L. McNeil, Durango, Colo.; Dr. A. R. Johnston, St. George, S. C.; Mr. George C. McIntyre, Omaha, Nebr.; Mr. William Hasson, Oil City, Pa.; and Mr. George Van Tuyl, New York, N. Y. The Comptroller of the Currency, the judge of the District Court for the Eastern District of Pennsylvania, and the assayer, United States assay office, New York, ex officio members.

The commission met at the mint at Philadelphia, Wednesday, the 12th day of February, 1919, and Hon. William A. Ashbrook was elected chairman.

The chairman, with the approval of the commission, appointed the following committees:

Committee on counting.—Hon. George P. Darrow, chairman, and Messrs. Phelan, McCracken, Morris, Johnston, McNeil.

Committee on weighing.—Maj. Louis Fischer, chairman, and Messrs. Pittman, Newell, Riordan, Heck, Vaughan, Ailworth.

Committee on assaying.—Mr. George R. Comings, chairman, and Messrs. Emerson, Burnham, Page, Merrill, Adams, McIntyre.

Committee on resolutions.—Hon. Michael F. Phelan, chairman, and Messrs. Page, Adams, Ailworth, Merrill.

Mrs. Virginia H. Carpenter was designated as secretary of the commission.

COMMITTEE ON COUNTING.

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins in accordance with section 3539 of the Revised Statutes were delivered to them by the superintendent of the mint at Philadelphia, and upon comparison with the transcript kept by the Director of the Mint and the count of coins from packages selected at random from deliveries of each month at each mint, were found to be correct with the following exceptions:

Delivery No. 35, April 12, 1918, from the San Francisco Mint, in addition to the 135 10-centavo Philippine coins, contained 1 United States quarter dollar; delivery No. 96, April 17, calling for 90 quarter dollars, contained but 89 pieces; this amount, however, was balanced by the delivery of the 12th.

The transcript of the mint at Denver called for 4,000 dimes for the month of May, 1918, while the delivery packages contained 4,200 pieces. The transcript for June called for 884 dimes, the packages

containing but 684 pieces, but showing that the June transcript balanced that of May.

The verification of the packages being completed, they were delivered to the committees on weighing and on assaying.

The table following gives the packages opened and coins counted by the committee on counting:

Denomination.	Philadelphia.		San Francisco.		Denver.		Total.	
	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.

Total.....			5,706	1,027.10			5,706	1,027.10

COMMITTEE ON WEIGHING.

The committee on weighing reported that they had weighed the coins shown in the list below and had found the same to be within the tolerance established by law. The coins were selected at random from those reserved for the annual assay by the mints at Philadelphia, San Francisco, and Denver.

The weighings were made on the Troemner balance reserved for the use of the commission, after an examination had shown it to be in good condition. The United States coins were directly compared with a set of coin weights which were accompanied by the certificate signed by the Director of the Bureau of Standards, and which gave the values of weights in terms of the United States standard.

The weights used to test the Philippine coins were a set submitted by the mint. They were checked by comparison with the United States coin weights.

The standard Troy weights of the mint were carefully intercompared with one another and found to be in agreement within negligible quantities.

RESERVED COINS WEIGHED.

Denomination.	Philadelphia.		San Francisco.		Denver.		Total.	
	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.
Silver:

COMMITTEE ON ASSAYING.

The committee on assaying reported that from the coins reserved from the United States mints at Philadelphia, San Francisco, and Denver, samples for assay had been taken representing all denominations coined at each mint during each month of the year.

The results of assays made of the individual coins and of samples from larger numbers massed and melted are given in the schedules. From these it is seen that—

The highest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at Philadelphia, 900.7; San Francisco, 900.4; Denver, 900.4.

The lowest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at Philadelphia, 898.3; San Francisco, 898; Denver, 898.2.

The highest and lowest assays upon the Philippine silver coinage at San Francisco are 750.5 and 748.8.

The committee tested the acid used in the humid assay of silver and found it to contain only a trace of chlorine.

The balances used were also tested and found to be correct. The committee deems the assays exhibited in the following schedule to be entirely correct:

ASSAYS OF SILVER COINS MELTED IN MASS.

COMMITTEE ON RESOLUTIONS.

The following report submitted by the committee on resolutions was unanimously adopted:

Whereas the United States Assay Commission of 1919, appointed by the President of the United States, has met at the United States mint in the city of Philadelphia and Commonwealth of Pennsylvania on the 12th, 13th, and 14th of February, A. D. 1919, to test and examine the weight and fineness of the coins reserved at the several mints during the calendar year 1918, pursuant to section 3547 of the Revised Statutes; and

Whereas the commission is about to close its meeting in completion of the performance of its duties, the committee on resolutions desires to offer the following resolutions:

Be it
Resolved, That it expresses its unreserved commendation for the unselfish and loyal spirit manifested under extraordinarily exacting conditions and the excellent efficiency attained, in spite of unprecedented demands made necessary by the war, by the entire force engaged in the work of our mints, officials and employees alike, under the distinctly capable administration of the director, Hon. Raymond T. Baker; and be it further

Resolved, That the commission expresses its profound satisfaction in particular for the excellent condition in which it found those matters connected with the conduct of the mints coming within the scope of its service and for the thorough and painstaking provisions made even to minute details both prior to and during the conduct of its meeting whereby its work has been expedited and facilitated; and be it further
Resolved, That the commission expresses its deep gratification for the constant and uniform courtesy extended it by the affable director, by the thoroughly efficient superintendent of the mint at Philadelphia, Hon. A. M. Joyce, by the gracious and

competent secretary, Mrs. Virginia H. Carpenter, and by their associates and by the various employees without exception who have contributed so much to make agreeable and pleasant the performance of the tasks for which the commission has assembled.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1919, is respectfully submitted.

RAYMOND T. BAKER,
Director of the Mint.

Hon. CARTER GLASS,
Secretary of the Treasury.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD
AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1918

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1918.

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint and the Geological Survey working in conjunction, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the figures of the mine production made by the survey. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1918 is estimated to have been \$68,646,700, and the production of silver is estimated at 67,810,139 fine ounces. A comparison of these figures with those for 1917 indicates decrease of production of both gold and silver, the former by approximately 15.1 million dollars and the latter by approximately 3.9 million ounces.

With the exception of Arizona, all the States which produce largely of gold show reductions for 1918. Arizona's production increased about \$400,000. The greatest reductions were, approximately, in Alaska 5 million dollars; California 4 millions, and Colorado 3.2 millions, while reductions near the half million dollar mark occurred in South Dakota, New Mexico, Montana, Utah and Oregon.

Montana increased silver production by 1.8 million ounces, while the larger reductions of output occurred in Idaho, 2 millions, and in Nevada, 1.3 millions.

A brief review of mining conditions in each State follows, for which acknowledgement is made to the Geological Survey:

ALASKA.

Alaska mines during 1918 produced gold to the value of \$9,480,952, the smallest output since 1904, and a decrease of \$5,176,401 from that of 1917. This reduction was due chiefly to curtailment of operations because of the scarcity of labor and the high cost of materials. There was also a reduction in the output of silver, which was due to the decrease in production of gold and copper. The value of silver produced in Alaska in 1918 was \$847,789, or \$173,291 less than in 1917.

In 1918 about 37.7 per cent of the total gold production came from lode mines, compared with 31 per cent credited to lode mines in 1917, and 38 per cent in 1916.

The auriferous lode mines produced during the year gold valued at \$3,473,317, and silver valued at \$90,064.

Twenty-five gold-lode mines were operated in 1918. There was also a production from 7 prospects, abandoned mines, or small mines that were not in regular operation. Thirty-one mines were operated in 1917. Of the producing mines 6 were in southeastern

Alaska, 1 in the Copper River district, 3 on Prince William Sound, 4 on Kenai Peninsula, 5 in the Willow Creek district, and 6 in the Fairbanks district. In 1918 the average value of the gold and silver contents for all siliceous ores mined was \$1.70 a ton; the average for 1917 was \$1.37.

There were 116,363 fine ounces of gold and 26,054 fine ounces of silver recovered by amalgamation, and 22,127 fine ounces of gold and 2,102 fine ounces of silver recovered by cyanidation in 1918. The copper ores contained \$107,635 in gold and 719,391 fine ounces of silver valued at \$719,391. The average yield of gold and silver from copper ores was \$1.07 a ton.

The value of the placer gold produced in Alaska in 1918 was about \$5,900,000, compared with an output valued at \$9,810,000 in 1917. The decrease was general throughout the territory, except in the Copper River and Yentna districts, and some of the smaller Yukon districts. It was due mainly to curtailment of operations because of shortage of labor, high cost of supplies, and uncertainty as to future conditions. Local decreases were due also to unfavorable climatic conditions and to the depletion of some of the richer placers. It is estimated that about 727 placer mines were operated in 1918, but many for only a part of the season; the number was 810 in 1917.

Twenty-eight gold dredges were operated in Alaska in 1918, compared with 36 in 1917. Twenty-one dredges were in Seward Peninsula, three in the Iditarod district, and one each in the Fairbanks, Circle, Yentna, and Kuskokwim districts. These dredges handled about 2,490,000 cubic yards of gravel and produced gold valued at about \$1,425,000. In 1917 the dredges handled about 3,700,000 cubic yards of gravel and recovered gold worth \$2,500,000. The average gold recovery per cubic yard was about 57 cents in 1918 and 68 cents in 1917. Up to the end of 1918 gold to the value of \$19,035,000 had been mined by dredges.

ARIZONA.

The value of the mine output of gold, silver, copper, lead, and zinc in Arizona in 1918 was \$202,134,880, a decrease of \$7,258,922, or more than 3 per cent. There was a good increase in the output of gold and copper, but the output of silver, lead, and zinc was less than in 1917. On account of the price of the metals, there was an increase in the value of the output of silver, but a decided decrease in the value of the production of copper in Arizona.

The gold production had a value of \$5,435,027, an increase of \$366,834 from that of 1917. Of this amount, only \$4,234 represented the value of the placer gold. Mohave County, with \$2,798,903, was first as a gold producer. Yavapai County took second place, with \$1,117,701, closely followed by Cochise County. The largest part of the gold, or \$2,915,523, had its source in bullion from ore treated by amalgamation or cyanidation. Crude ore shipped directly to smelters contained \$2,091,292, and concentrates, \$419,589. The gold from deep mines was derived from the following sources: Siliceous ore, \$3,100,767; copper ore, \$2,248,071; lead ore, \$76,268; zinc ore, \$62; copper-lead ore, \$720; and lead-zinc ore, \$4,905. There was a decided increase in gold from copper ores, corresponding with the greater production of copper, and a marked increase in gold from

siliceous ores, resulting from the production from the San Francisco district of Mohave County, in the vicinity of Oatman, and especially from the United Eastern mine. More than 98 per cent of the State's gold came from copper ore and siliceous ore combined. Placers are unimportant. With each million pounds of copper the gold output was increased nearly \$4,000 in 1918. The greatest increase, therefore, came from gold ores which were sufficiently rich to pay the excessive costs of mining and milling. Many gold mines which produce low-grade ore, such as the Gold Road mine, were prevented from operating on account of unusually high costs. In 1918 the largest producers of gold were the United Eastern, Tom Reed, United Verde, Calumet & Arizona, Copper Queen, Blue Bell, and Magma mines. The two first mines produce siliceous gold ore and the others copper ore.

The silver output amounted to 6,686,152 ounces, a decrease of 297,761 ounces, or more than 4 per cent. The value of the output, however, increased \$931,408 on account of the price. Of the total silver, Yavapai County alone produced 2,502,968 ounces, and Cochise County followed with 2,315,518 ounces. There was a decrease of 391,702 ounces in Cochise County and an increase of 295,385 ounces in Yavapai County. The greater part of the silver, or 5,372,505 ounces, came from crude ore shipped to smelters; concentrates contained 1,109,510 ounces, and the gold and silver bullion, 158,476 ounces. The sources of the silver output were as follows: Siliceous ore, 917,973 ounces; copper ore, 5,347,618 ounces; lead ore, 362,182 ounces; zinc ore, 4,560 ounces; copper-lead ore, 17,578 ounces; and lead-zinc ore, 36,208 ounces. Thirteen mines in Arizona produced more than 100,000 ounces of silver each. The four following mines each produced more than 500,000 ounces of silver: United Verde, Calumet & Arizona, Copper Queen, and United Verde Extension.

There were 469 mines producing during the year, of which number only 13 were placer mines. The ore output was 19,038,486 tons, an increase of 3,268,293 tons. A great part of this increase was due to the low-grade copper properties in Gila, Greenlee, Pinal, and Pima Counties. Of the total ore, 13,125,101 tons were concentrated to make 865,232 tons of concentrates, 3,845,332 tons were shipped directly to smelters, 203,654 tons were treated in gold and silver mills, the remainder being made up by slag, old tailings, and ore leached. There were distinct increases in copper ore and siliceous ores, but lead ore, zinc ore, and mixed ores were less.

Arizona is the largest copper-producing State, and the output in 1918 was 764,855,874 pounds, or an increase of more than 7 per cent; lead output was 12,503,689 pounds, a decrease of nearly 47 per cent; and recoverable zinc output was 2,269,643 pounds, or about 11 per cent of the output in 1917.

CALIFORNIA.

The yield of gold in California in 1918 showed a much more material decrease from the previous year than has been the case for a very long period, according to Charles G. Yale, of the United States Geological Survey, who annually compiles the figures for that State. In 1918 all classes of mines which produced gold showed a material reduction in output, as compared with 1917. This decrease in value of pro-

duction is in evidence also in all other classes of metal mining, proving that the decline was entirely due to war conditions and not to any decadence in the gold-mining industry alone. There is nothing in the statistics collected to show any signs of general exhaustion in the ore veins or deposits of the deep gold quartz mines. The only signs of exhaustion of gold deposits were in connection with the gold-dredging industry, where certain companies have worked out their ground entirely and ceased operations. This cessation of work has occurred mainly in some of the older dredging fields and at a few isolated points where available dredging areas were comparatively small. The largest and most productive dredge field, that in Yuba County, where the machines are of the greatest size and capacity, and in the greatest number, materially increased its yield in 1918, as compared with 1917, so that Yuba became the leading gold-producing county in the State in 1918. Thus a gravel-mining county exceeds in production of gold by \$720,563 any of the quartz-mining counties of California. This is a remarkable fact when it is remembered that 20 years ago, before gold dredges began work, the miners themselves thought that the productive placer mines of the State were largely worked out and that for future production they must look mainly to quartz mines.

Of the total gold produced in California in 1918, which was \$16,528,953, 53 per cent came from deep mines and 47 per cent from the placers. The yield in gold from deep mines was 2 per cent less of the total in 1918 than in 1917, and that from all placers, 2 per cent more, showing gains on the part of gravel mines. Siliceous ore from deep quartz mines produced 95 per cent of all the deep-mine gold, and the dredges produced 95 per cent of all the placer gold. The decrease in gold output from the deep mines in 1918 was \$2,323,300, while the decrease in placer gold was \$1,235,251, of which the dredge share was \$881,600. The deficit for the year, therefore, is more largely due to deep than to placer mines. The entire falling off in gold yield for the year, as compared with 1917, was \$3,558,551. The production of deep mines in 1918 decreased 20 per cent, whereas that of the placers decreased only 14 per cent.

The number of distinctively deep gold mines producing in 1918 was 216, which is 112 more than in 1917. Some gold and silver was also recovered from copper, lead, and zinc ores. It was almost entirely war conditions which brought about the excessive decrease in the deep-mine gold industry. Some deep mines ceased operations entirely during 1918 because the grade of ore could not meet the abnormal expenses, but these will nearly all resume work later. The main cause, however, of the reduction of deep-mine gold was that the mines were unable to carry on continuous operations during the year, mainly by reason of scarcity or inefficiency of labor. Some of the mines were only worked two, three, or six months, lying entirely idle the rest of the time. Some worked the entire year with only one shift of men daily. This restriction of operations almost entirely accounts for the shortage of gold production in California in 1918. The placers were affected in the same way, but not so badly. Not only were labor costs excessive but also those for supplies, power, and freight, consequently it costs very much more to produce an ounce of gold than it ever had before. In the case of one of the large deep mines of the State, with a gold production of over a million dollars, the president of the company in his annual report said that "a situation

resulted so that in the latter part of the year the cost of producing an ounce of gold exceeded the standard price at which it could be sold." In the five Mother Lode counties of the State, where a large percentage of the total ore produced is milled, the output of ore was materially reduced, but the average yield of gold per ton of ore was about a dollar per ton higher than it has been in years, and most of this ore came from very deep workings. The value of all metals from the ores of the State in 1918 gives an average of \$9.32 per ton, as compared with \$9.50 in 1917. The average in gold and silver per ton was \$4.03.

The greatly increased number of mines reporting production in 1918, compared with several years previous, seems a somewhat anomalous condition. Most of the increased number were small operations. In the mountain, foothill, and valley counties, old miners and prospectors, and others without steady occupation or not capable of vigorous industrial work, turned to nomadic mining and prospecting in the older mining regions. The gold was obtained by crevicing and from river beds along the rivers, gulches, and creeks and from working river sands and small gravel bars, etc. Gold was also obtained from small veins and seams and rich spots in mines where no assessment work had been done and no watchmen employed.

Of the total gold yield in California of \$16,528,953, the deep mines produced \$8,690,174. Of the deep-mine gold, the largest percentage came from siliceous ore, then from copper ore, and some from lead, silver-lead, and zinc ores. The producing deep mines of California in 1918 may be classified by chief metallic product as follows: Gold, 260; copper, 62; lead, 56; copper-lead, 6; zinc, 4. This is 147 more than in 1917. The total output of ores, 2,503,411 tons, is 499,839 tons less than in 1917.

Of the total ore milled in the State, 60 per cent came from the five Mother Lode counties. Amador, the largest producer of the Mother Lode counties, produced 35 per cent of the total quantity of ore milled in the State and 58 per cent of the ore milled in the Mother Lode counties. Mines in the Mother Lode counties had in 1918 a total of 845,802 tons treated at gold and silver mills and 169,707 tons sent directly to concentrating plants, which yielded \$4,334,061 in gold and silver, or an average of \$4.268 per ton, compared with 1,236,903 tons in 1917, yielding \$5,130,682, or an average of \$4.148 per ton.

The placer mines of the State yielded in gold \$7,838,779. Of this, \$7,431,927 came from dredges, \$213,229 from hydraulic mines, \$108,420 from drift mines, and \$85,203 from surface placers. The producing placers were made up of 87 hydraulic mines, 49 dredges, 66 drift, and 114 surface placers. All these combined produced 47 per cent of the total gold yield of the State in 1918. The dredges produced 95 per cent of the placer gold and 45 per cent of the total gold yield from all sources. The Marysville dredging field shows a material increase in gold yield in 1918, but the other older fields, in Butte and Sacramento Counties, show a decrease. There were 6 less dredges operating in 1918 than in 1917, and some of those counted as producers only worked a few months and then ceased operations.

Of the 32 counties producing gold in California in 1918, 9 yielded no placer gold and 6 no gold from deep mines. Four counties produced more than \$1,000,000 each, as follows: Yuba, \$3,767,933; Amador, \$3,249,385; Nevada, \$3,070,453; and Sacramento, \$1,694,724. The leading hydraulic mining county was Trinity; the

largest producer of gold from dredges was Yuba County; from surface or sluicing placers was Butte; and the main producer from drift mines was Placer County. Mines in Nevada County produced the most gold from lodes. The largest increase in gold of any county in 1918 was in Yuba County.

The total yield of silver in California in 1918 was 1,427,711 fine ounces, valued at \$1,427,711, which is a decrease of 347,720 ounces in quantity and of \$35,244 in value. Of the total quantity, 1,397,802 ounces was derived from deep mines and the rest from placers. The largest part of the output came from smelting ores, the copper ores yielding 669,711 ounces, the lead ores, 448,547 ounces, the copper-lead ores, 12,820 ounces, zinc ores, 38,392 ounces, and silicious ores only 228,332 ounces. Inyo County was the leading county in production of silver in the State, with 441,548 ounces to its credit. The silver from placer mines was only 29,909 ounces.

COLORADO.

The mine output of gold, silver, copper, lead, and zinc in Colorado for 1918 amounted to \$12,705,000 in gold, 6,900,000 ounces of silver, 66,000,000 pounds of lead, 6,190,000 pounds of copper, and 86,550,000 pounds of zinc, as compared with \$15,729,224 in gold, 7,304,353 ounces of silver, 67,990,012 pounds of lead, 8,122,004 pounds of copper, and 120,315,775 pounds of zinc in 1917. This shows a decrease of 3,000,000 for gold and 400,000 ounces of silver, a slight decrease for lead, an appreciable decrease for copper, and a heavy decrease for zinc.

The increasing costs for labor and materials, the scarcity of efficient labor, and the influenza epidemic all made mining difficult. Mining managers report the difficulties of operation in 1918 as the most severe in the history of mining in Colorado and dividends for the year the most disappointing.

The five lead-copper plants at Globe, Salida, Pueblo, Durango, and Leadville were operated steadily, with an actual increase in quantity of ore from Colorado mines, but a decrease in quantity from outside States, particularly in zinc residues. The smelting industry of Colorado is totally dependent on Idaho lead ores in order to make a charge for the furnaces with sufficient lead to carry the gold and silver of Colorado ores. The United States Zinc Co.'s magnetic-separation wet-concentration mill and zinc retort furnaces at Pueblo, treating lead-zinc sulphide ores from the Western States, was not as actively operated as in 1917. The River Smelting & Refining Co.'s plant at Florence continued to treat low-grade zinc-lead-copper ores from Colorado and other Western States. The Western zinc-oxide plant at Leadville was steadily operated on Leadville zinc carbonate ores, and the new Ohio zinc-oxide plant at Canon City, which started in June, 1918, was operated on Colorado zinc carbonate ores. The Empire Zinc Co.'s magnetic-separation mill at Canon City was operated steadily on Red Cliff and Leadville zinc-lead sulphide ores, but the Western Chemical Co.'s magnetic-separation, wet-concentration sulphuric-acid plant, treating similar ores, at Denver, was idle the last two months of the year. Copper ore and matte, lead bullion and cyanide precipitates were shipped from Colorado to the smelter at Omaha, and some copper and lead ores were shipped to plants in

Utah. The quantity of zinc ores sent to Kansas, Oklahoma, and Eastern zinc-oxide and zinc retort plants decreased heavily. Much silver-bearing pyrite was used for the manufacture of sulphuric acid up to the date of the armistice, and some pyrite went to the East and South. Considerable iron-manganese ore, chiefly from Leadville, was shipped to Pueblo and to far Eastern States.

In the gold district of Cripple Creek operations were exceedingly difficult. The output of the district fell from \$10,394,847 in 1917 to \$8,119,747 in 1918. The Portland Colorado Springs cyanidation mill was closed in April, and the ores that had been going to that mill were sent to the Golden Cycle, at Colorado Springs, which has been operated continuously despite high costs of materials and labor and shortage of labor. In August the Portland Victor cyanidation-concentration mill was closed and the low-grade ores of the district were transferred to Portland Independence concentration-cyanide mill, which has been operated steadily throughout the year. The percentage of extraction at the Independence mill was good, but the profits realized were disappointing, largely owing to war conditions. Almost without exception every improvement devised to reduce costs, and every economy instituted during the year, was immediately offset by some increase in the cost of labor, or of some chemical or commodity entering into the extraction of gold.

Lake County, chiefly Leadville, but including also the Lackawanna Gulch, Sugar Loaf, St. Kevin, and Wortman lode districts and the Arkansas River dredge district, produced \$845,000 in gold, 2,270,000 ounces of silver, 24,000,000 pounds of lead, 1,600,000 pounds of copper, and 44,600,000 pounds of zinc in 1918, as compared with \$1,175,219 in gold, 2,184,000 ounces of silver, 18,301,802 pounds of lead, 2,182,623 pounds of copper, and 60,254,333 pounds of zinc in 1917. Manganese-iron ore, manganese-silver fluxing ore, lead carbonate, and zinc carbonate ores continued to be shipped from the Downtown district, which was unwatered in 1916. Considerable sulphide ores were shipped from the Fryer Hill district (also unwatered in 1916) until June, when the entire operation of this area, under the management of the United States Smelting, Refining & Mining Co., was abandoned. The year saw the close of the Moyer-Tucson mines of the Iron Silver Co., which had, however, purchased additional producing property. The cessation of pumping at the Moyer added to the water at the Cord winze of the Yak Co., so that with increased costs of mining and other difficulties this property was not producing to its usual standard. The Breece Hill goldmines also did not maintain their usual output. The close of the year also saw the closing of the Western Mining Co.'s property, from which the bulk of the zinc carbonate ores from 1911 to 1918 has come.

In the San Juan region the situation as to labor, mining costs, and influenza was particularly arduous, but despite these difficulties San Juan County's production fell off only \$60,000 in gold, 200,000 ounces of silver, 1,000,000 pounds of lead, and 600,000 pounds of zinc. copper, and equaled the output of 1917 of 3,200,000 pounds of zinc. San Miguel County mills, treating ore from both San Miguel and Ouray Counties, produced \$2,100,000 in gold, an increased yield, 1,150,000 ounces of silver, 6,000,000 pounds of lead, 1,000,000 pounds of copper, and 400,000 pounds of zinc. Ouray County

mines, as operated from the Ouray side of the mountains, showed an increase for all metals except zinc, owing to work at Red Mountain and Sneffels. Development work was continued at the Camp Bird mine, and the long, low-level adit was completed during the year, but the mill remained idle and no ore was mined. La Plata County mines were practically idle, the production being nominal. Dolores County (Rico) yield showed small decreases for gold, silver, and copper, and appreciable decreases for lead and zinc. Hinsdale County's production was the largest in years, owing to the reopening of the Ute and Ulay mines, which were, however, closed again in the fall of the year. Mineral County (Creede) showed decreases for all metals except silver and gold, for which there was an increase of 77 per cent for silver and of 30 per cent for gold. Saguache County maintained its silver output only, chiefly from one mine. The proposed plans for the construction of a mill by the Rawley Mining Co. were abandoned, at least during present conditions.

Summit County's zinc production fell from 19,868,814 pounds of recoverable metal in 1917 to 16,200,000 pounds in 1918, and gold production from mines and dredges fell from \$603,437 in 1917 to \$467,000 in 1918. Eagle County (Red Cliff) mines were active under the management of the Empire Zinc Co.

Boulder County's yield of both gold and silver decreased very considerably; Clear Creek County's gold yield decreased \$85,000, silver 160,000 ounces, lead 1,300,000 pounds, copper 200,000 pounds, and zinc 1,340,000 pounds. Despite the apparent idleness of most of the mines and the almost complete idleness of all mills in Gilpin County, the 1918 yield was approximately 60 per cent of the production in 1917. Early in the year the long established Chamberlain sampling plants at Black Hawk and Georgetown were dismantled, and in October the Idaho Springs plant was closed and dismantled, but another company remodeled one of the idle sampling works at Idaho Springs and began receiving ores in November.

Chaffee County's production decreased for gold, silver, and copper, but increased slightly for lead and zinc; and Pitkin County (Aspen) yielded 558,722 ounces of silver and 11,666,592 pounds of lead.

CENTRAL STATES.

Only three of the Central States—Michigan, Missouri, and Illinois—produced any silver in 1918. The total production in 1918 was 564,577 fine ounces, valued at \$564,577, against an output of 757,323 fine ounces, valued at \$624,034, in 1917. No silver ore was shipped in 1918, and of the 1918 production 509,467 ounces came from the copper lodes of Michigan, a decrease of 179,084 ounces.

The silver production of Missouri was 46,939 ounces compared with 61,586. There was a smaller quantity of lead desilverized, and only 39,047 ounces of silver were derived from this source. From copper concentrates and from copper and copper-nickel-cobalt ores 7,892 ounces of silver were reported.

From the lead concentrates derived from southern Illinois fluor-spar ores 8,171 ounces of silver were recovered. This was 985 ounces more than the recovery in 1917, and the average recovery per ton of concentrates smelted was 6.65 ounces in 1918 against 5.80 ounces in 1917.

EASTERN OR APPALACHIAN STATES.

The total production of gold in the Eastern or Appalachian States in 1918 was 694.27 ounces, value \$14,352, of which Alabama produced \$797; Georgia, \$5,893; Maine, \$682; North Carolina, \$1,631; Tennessee, \$4,866; Vermont, \$83; and Virginia, \$400. The total decrease in gold in 1918 was \$14,875. The production from placer mines was \$6,591 and that from deep mines \$7,761. The gold from deep mines included 83.68 ounces from siliceous ores and 291.75 ounces from copper ores. The output of silver in 1918 was 106,585 ounces, an increase of 135 ounces over that of 1917. Most of the silver was derived from copper ores, of which 93,620 ounces was credited to Tennessee, 6,338 ounces to Maine, 3,440 ounces to Vermont, and 1,814 ounces to Virginia. Only 29 ounces of silver came from placer bullion and 15 ounces from siliceous ores. There were 1,329 ounces of silver obtained from lead and lead-zinc ores in 1918, of which 129 ounces were from ores produced in New York and 1,200 ounces from ores mined in New Hampshire.

Value of estimated production of gold in the southern Appalachian States, 1799-1918, by States.

Alabama.....	\$766,336
Georgia.....	17,823,769

IDAHO.

In 1918 the total value of the metal output of Idaho was \$36,522,-158, or a decrease of \$18,322,995 from that of 1917. Of this total, the gold was valued at \$702,816; silver, \$9,172,340; copper, \$1,613,-870; lead, \$20,923,416; and recoverable zinc, \$4,109,716. The decrease was general, but especially large in lead, zinc, and silver. The unusual expenses of mining, milling, and smelting, together with the decreased price of most of the metals, had a serious effect on the mining industry.

Gold decreased from \$804,809 in 1917 to \$702,816 in 1918. Of this total, the placer gold amounted to \$276,410, against \$135,231 in 1917. The gold won by dredges was valued at \$239,762, an increase from \$59,477 in 1917. Siliceous ore produced more gold than any other kind, or \$294,645. Gold in copper ore was valued at \$69,038; lead ore, \$57,516; lead-zinc ore, \$5,202; and zinc ore, \$5. Shoshone County was the largest gold producer on account of the dredge operations near Murray. Boise County produced the next largest amount of gold, but the production of the mines of Idaho County fell far below the output of 1917. Gold in crude ore shipped directly to smelters had a value of \$94,941; gold in concentrates, \$115,981; and gold in ores amalgamated and cyanided, \$214,557. In 1918 more than 81 per cent of Idaho's gold came from placers and siliceous ore. The difficulty in securing efficient labor and the cost of supplies were felt particularly at the gold mines, many of which were forced to close. Most of the deposits of siliceous ore are far from rail trans- portation, as in Idaho, Elmore, Lemhi, and Owyhee Counties. Though dredging was successful at Murray, the removal of the Boston-Idaho dredge, formerly at Idaho City, greatly reduced the placer output of Boise County. The five largest gold producers in 1918 were the Yukon Gold Co., at Murray; Gold Hill & Iowa Co., at Quartzburg; Empire Copper Co., at Mackay; Sherman & Corporal mine, at Burg- dorf; and the Boston & Idaho Co., at Idaho City.

The silver output was 9,172,340 fine ounces, a decrease of 2,856,998 ounces, or nearly 24 per cent. The greatest production, and also the largest decrease, occurred in Shoshone County. There was a fair increase in Blaine County, but decreases in Boundary, Butte, Custer, and Lemhi Counties. The value of the output decreased by \$739,835, notwithstanding the higher price of the metal. Most of the produc- tion of silver came from lead ore and lead-zinc ore, the former sup- plying 8,036,861 ounces, and the latter 794,449 ounces. Copper ore

supplied 262,991 ounces; siliceous ore, 69,936 ounces; zinc ore, 3,114 ounces; and small quantities came from placers and copper-lead ore. Concentrates of various kinds supplied 6,229,450 ounces of silver; crude ore shipped to smelters, 2,912,490 ounces; and bullion from gold and silver mills, 9,952 ounces. The Coeur d'Alene region alone produced 8,447,219 ounces of silver. In 1918 six mines in Idaho produced more than 500,000 ounces of silver each. They were the Hercules, Hecla, Bunker Hill, Morning, Tamarack & Custer, and Caledonia mines.

There were 301 mines producing during the year, of which 85 were placer mines and 216 deep mines. The total ore mined and treated was 2,091,619 tons, a decrease of 666,888 tons from the total of 1917. Of this tonnage, 1,734,718 tons were concentrated, 186,551 tons were shipped directly to smelters, and 40,845 tons were treated in gold and silver mills; the remainder—129,505 tons—being slag and old tailings. The mines of Idaho also produced 6,533,888 pounds of copper, 294,695,993 pounds of lead, and 45,161,712 pounds of recoverable zinc. The Bunker Hill smelter and refinery at Bradley, Idaho, were active throughout 1918, treating ore and concentrate principally from the Coeur d'Alene region. At the same time improvements and additions were being made at the plant.

MONTANA.

The mine output of gold, silver, copper, lead, and zinc in Montana in 1918 had a total value of \$121,405,569, an increase of \$11,256,187 over that of 1917. There was a good increase in the silver, copper, lead, and zinc, though there was a decrease in gold. The increases seem large because the output of 1917 was unusually low on account of labor troubles. The operation of the electrolytic zinc plant at Great Falls and the saving of metals from residues have added greatly to the metal production of the State.

The gold output was valued at \$3,104,764, of which \$2,708,532 came from deep mines and \$396,232 came from placers. Most of the placer gold came from dredge operations in Alder Gulch, of Madison County, but production from this source decreased considerably. As in former years, the gold was derived principally from siliceous ores, which supplied \$1,666,429. Copper ore was next in importance with \$671,101; lead-zinc ore supplied \$271,566; zinc ore, \$637; lead ore, \$98,137; and copper-lead ore, \$662. The gold from crude ore shipped to smelters contained \$828,330; concentrates, \$894,480; and bullion from amalgamation and cyanidation mills, \$930,309. About 88 per cent of the gold output of the State came from siliceous ore, copper ore, and placers combined. In 1918 there was a decided decrease from siliceous ore and placers, but an increase from copper ore. Mines producing low-grade gold ore, especially in Phillips, Fergus, and Lewis and Clark Counties, were seriously handicapped by high costs and difficulty in securing labor. Six mines in Montana produced gold valued at more than \$100,000 each in 1918. These were the copper property of the Anaconda Co., Shannon-Piegan-Gloster, Southern Cross, Conroy Placers, North Moccasin, and Ruby Gulch mines.

The silver output increased from 13,128,142 ounces in 1917 to 16,797,479 ounces in 1918, an increase of 3,669,337 ounces, or 28 per

cent. The output is a record for the State. The value of the output was \$16,797,479, an increase of \$5,979,890. Silver Bow County, or the Butte region, produced 15,013,855 ounces, and Jefferson County was next with 537,777 ounces. Of the total silver, 13,471,445 ounces were derived from concentrates, 2,771,937 ounces from crude ore, and 115,716 ounces from bullion produced at gold and silver mills. Separated as to kinds of ore, copper ore supplied 10,521,219 ounces; lead-zinc ore, 4,532,034 ounces; siliceous ore, 1,028,443 ounces; lead ore, 707,757 ounces; zinc ore, 2,556 ounces; copper-lead ore, 2,304 ounces; and placers, 3,166 ounces. The increase was pronounced in copper ore and lead-zinc ore. Six properties produced more than 500,000 ounces of silver each in 1918. These were the copper property of the Anaconda Co., Butte & Superior, zinc property of the Anaconda Co., North Butte, Elm Orlu, and Davis Daly mines.

There were 493 producing mines, of which 407 were deep mines and 86 were placer properties. The total output of ore was 7,823,967 tons, an increase of 1,516,803 tons over that of 1917. Of this total, 5,961,753 tons were concentrates, 478,860 tons were shipped directly to smelters, 175,036 tons were treated in gold and silver mills, and a large tonnage of old tailings was also milled. In addition to gold and silver, the deep mines of the State produced 323,174,850 pounds of copper, 37,135,875 pounds of lead, and 209,258,148 pounds of recoverable zinc.

NEVADA.

The total value of the production of gold, silver, copper, lead, and zinc in Nevada was \$48,528,124, a decrease of \$5,896,456. There was a decrease in the quantity of each of the five metals, and a decrease in the value of each one but silver.

The gold output had a value of \$6,619,937, as against \$6,959,468 in 1917. Nye County was first in gold production in 1918 with \$1,991,845, but it was followed very closely by Esmeralda County with \$1,361,321. White Pine, Elko, Mineral, and Storey Counties were also important gold producers, and Humboldt, Clark, and Lander Counties followed. There was a decided decrease in the Goldfield district, of Esmeralda County, but it was largely offset by a good increase in Jarbidge district, of Elko County. The placer gold output was valued at \$218,380, against \$292,584 in 1917. No dredges were operated in 1918, and most of the placer gold came from the Manhattan and Round Mountain districts in Nye County and the Battle Mountain district in Lander County. The greater part of the gold, or \$4,911,139, was obtained from ores amalgamated or cyanided. Crude ore shipped to smelters contained \$525,879, and concentrates, \$954,115. The siliceous ores contained \$5,313,965; copper ore, \$1,016,774; lead ore, \$47,781; zinc ore, \$611; copper-lead ore, \$19,207; and lead-zinc ore, \$3,219. The cost of mining was even greater in 1918 than it was in 1917. Smelting and refining charges were increased, labor was scarce, and in June freight rates were advanced 25 per cent. Many of the mines, especially those producing gold and silver, found it impossible to operate profitably. In 1918 there were 11 mines each of which produced more than \$200,000 in gold. In the order of their importance, these were the Goldfield Consolidated, Nevada Consolidated, Elko, Tonopah Mining, Aurora Consolidated,

Tonopah Belmont, Elko Prince, Tonopah Extension, White Caps, Olympic, and Union Consolidated mines.

The production of silver in 1918 was 10,000,599 ounces, against 11,269,969 ounces in 1917, a decrease of 1,269,370 ounces. Nye County was the largest producer of silver, with 6,104,711 ounces, and Humboldt County was next with 869,662 ounces. There were large decreases in Nye and Churchill Counties. The output of the Tonopah district, in Nye County, decreased decidedly, from 7,068,737 ounces in 1917 to 5,929,920 ounces in 1918. Most of the silver, or 9,152,376 ounces, came from siliceous ores, and the source of the remainder was as follows: Copper ore, 278,615 ounces; lead ore, 429,917 ounces; lead-zinc ore, 112,721 ounces; zinc ore, 10,845 ounces; copper-lead ore, 12,218 ounces; and placers, 3,907 ounces. Bullion from gold and silver mills supplied 8,096,148 ounces of silver; concentrates, 509,928 ounces; and crude ore shipped to smelters, 1,365,603 ounces. In 1918 there were 16 mines in Nevada which produced more than 100,000 ounces of silver each. Of these, 8 produced more than 300,000 ounces each. They were the Tonopah Mining, Tonopah Belmont, Tonopah Extension, West End, Nevada Wonder, Rochester Mines, Jim Butler, and Montana Tonopah mines. In the Divide district of Esmeralda County development disclosed large bodies of ore containing gold and silver. Production was small in 1918, but the property may be the source of important production in the future.

There were 714 producers in the State in 1918, of which 54 were placers and 660 deep-mine properties. The production of ore sold or treated decreased from 6,473,519 tons in 1917 to 6,472,579 tons in 1918. Most of the ore, or 4,560,562 tons, was concentrated, making 544,061 tons of concentrates. The ore milled and treated largely by the cyanide process amounted to 1,042,874 tons, and crude ore shipped to smelters was 623,828 tons. The deep mines also produced 116,316,441 pounds of copper, 23,316,534 pounds of lead, and 16,724,753 pounds of recoverable zinc.

NEW MEXICO.

New Mexico metal mines in 1918 produced \$682,791 in gold, 782,421 ounces of silver, 98,264,563 pounds of copper, 8,398,239 pounds of lead, and 24,050,324 pounds of zinc. As compared with the 1917 production, gold decreased \$381,367, silver 611,944 ounces, copper 7,303,437 pounds, lead 710,565 pounds, and zinc 6,149,676 pounds.

Since 1915, the yield of gold and silver in New Mexico has been steadily decreasing, while copper and lead have increased enormously, and zinc has fluctuated but nevertheless maintained a large production.

The decrease for gold is to be credited to the decreasing production of the Mogollon district, which has slowly brought the New Mexico gold yield down despite the extraordinary revival of the Aztec mine, at Baldy. The Whiteoaks gold district has been a consistent yearly producer, but not in the quantity of former years. The reopening of operations at the Hopeful mine and the Vera Cruz mine in the Nogal district, will, if operations are continued, help to maintain the gold output. There is a very small content

of gold in the copper concentrates of the Chino Copper Co., but 35 per cent of the gold production of the State in 1918 came from the copper ores of Burro Mountain, Central, Lordsburg, Orogrande, and San Pedro districts. The San Pedro smelter was operated in 1918 for six months but is said to have been permanently abandoned, and the Burro Mountain mill, after a successful year in 1918, was temporarily closed early in 1919, but the Lordsburg district, with a decreased output for 1918, has continued a steady production in 1919.

The Mogollon district, which until 1918 had long produced over 50 per cent of the silver output of the State, produced only 39 per cent of the State total in 1918, and the copper ores of the State in 1918 furnished 32 per cent of the silver in 1918, and lead ores 15 per cent.

During 1918, at Mogollon, the Mogollon Mines Co.'s mill operations were seriously handicapped during the latter part of the year both by shortage of water and by the effects of the influenza epidemic. The rebuilding of the Socorro Mining & Milling Co.'s mill, partly destroyed by fire in 1917, was not completed until August, 1918, and the plant was operated irregularly the remainder of the year. In 1919 this company was placed in the hands of a receiver. There are plans being made to reopen the silver district at Bland, Sandoval County.

In 1918, the quantity of ore mined and treated at the Chino Copper Co.'s plants exceeded that for 1917 by 230,000 tons, but the production of copper decreased 4,000,000 pounds, equivalent to 5 per cent, owing to a decrease in mill recoveries mainly because of the necessity of mining for considerable periods from areas where the ores contain large percentages of carbonates and other oxidized copper minerals not recoverable in high percentage by the concentrating methods regularly employed.

The Organ Mountains district made an increased output of copper in 1918, but the two large companies which have held part of the district under lease and bond have given up their options. The Orogrande district's production of copper fell off heavily during the latter half of 1918.

The lead ores of Magdalena are dependent on the mining of zinc ores, which was curtailed during the last quarter of 1918 and the first half of 1919. The Organ Mountains district made a greatly increased output of lead in 1918, but the principal lessee has abandoned work there. The Cooks Peak lead ores are also dependent on the mining for zinc ores and there was a decided decrease in 1918 for both lead and zinc in this district. Other important lead-producing districts are the Victorio district, from which there was a considerable quantity shipped in 1917 and 1918; and the Central district, from which there was an important and an increased production of lead in 1918.

The zinc carbonate shipments in 1918 were much less than in 1917, there being a decided decrease in shipments of this class of ore from the important zinc carbonate district at Kelly in 1918, and no ore shipped from the Tres Hermanas and Florida Mountains districts, from both of which appreciable quantities were shipped in 1917. The Graphic flotation mill at Kelly was idle the last three months of 1918 and the Kelly magnetic mill was idle the whole year. The Cleveland magnetic separation mill at Pinos Altos was active the

first half of 1918 but was operated at greatly reduced capacity during the latter half of the year, and finally closed. The Hanover concentration mill was operated steadily in 1918 but closed in the spring of 1919.

OREGON.

The total number of mines reporting production from Oregon in 1918 was 120, which is 44 more than in 1917, according to Charles G. Yale, of the United States Geological Survey. The total gold production of the State was \$1,270,465, which is \$221,333 less than in 1917; and the silver output was 107,323 ounces, or 18,333 ounces less than in 1917. The total metal output of Oregon declined in value 12.63 per cent in 1918, as compared with 1917. Most of the deficit was due to the decreased gold product from dredges, although the copper values were also less. As far as gold from deep mining was concerned, the yield shows a slight increase over that of 1917. War conditions affected the mining industry of Oregon to some extent but not nearly so much as in other Western States. The added number of productive mines included no large properties, but were mostly small mines in old ground, worked over by miners and prospectors. The old dredging field of the State showed a material reduction in yield, owing to the fact that the best part of the ground had been worked out, and that being dug in 1918 carried smaller values per cubic yard.

The placer mines of Oregon produced \$498,249 in 1918, which is a decrease of \$229,117. The hydraulic mines produced \$86,205; the dredges, \$387,740; the drift mines, \$7,449; and surface placers, \$16,855. There were 50 hydraulic mines productive, 3 dredges, 5 drift, and 20 surface placers.

The total output of gold from deep mines in 1918 was \$772,216, or \$7,784 more than in 1917. Of the gold derived from deep mines, \$95,233 was recovered by amalgamation, \$583,049 by cyanidation, and \$93,934 by smelting. There were only 5 mines in Oregon in 1918 which made a yield of over \$100,000. These were the Baker Mines Co., Cornucopia Mines Co., Homestead Iron Dyke Co., and Commercial Co., in Baker County, and the Queen of Bronze Mines Co., in Josephine County. One of these mines produced 25 per cent of the entire metal output in Oregon in 1918. The largest yield of gold came from Baker County, \$1,009,656. The next county in rank of gold production was Josephine, followed by Jackson, Crook, Douglas, Umatilla, Clackamas, Lane, Malheur, Wallowa, Curry, and Wheeler.

The total metal output of Oregon, with a total value of \$1,983,942 in 1918, decreased \$286,932 in 1918, as compared with 1917. The quantity of ore treated decreased 11.4 per cent; the gold decreased 14.8 per cent; the silver decreased 14.6 per cent in quantity.

The ore treated in 1918 averaged \$6.91 per ton in gold and silver (aside from copper), as compared with \$6.05 per ton in 1917. The siliceous ore, amounting to 88,723 tons, yielded an average of \$8.59 per ton.

The combined output from the southwestern counties of Oregon, which form an extension of the California gold belt, and which are Benton, Coos, Curry, Douglas, Jackson, Josephine, and Lane, was \$128,371 in gold and \$1,340 in silver. The total increase in gold in these counties was \$11,296.

Northeastern Oregon comprises the counties of Baker, Crook, Grant, Harney, Malheur, Umatilla, Union, Wallowa, and Wheeler. No output was made in Harney or Union counties in 1918. The combined gold output of the seven producing counties in this region in 1918 was \$1,140,709, of which Baker produced \$1,009,656, or 88.5 per cent. There was a decrease of gold in 1918 in these counties, as compared with 1917, of \$234,014, or 17 per cent. The yield of placer gold in 1918 was \$413,631, a decrease of \$223,718, or 35 per cent. The lode mines produced in gold \$727,078 in 1918, a decrease of only \$10,196, or 1.39 per cent. The greatest decrease in gold in any one county was in Baker and was \$218,543.

SOUTH DAKOTA.

The year 1918 was a difficult one for the operation of gold mines, because of the increased costs for labor and supplies, and because of the scarcity of efficient labor. In South Dakota, the results of these conditions were shown in a decrease in production from \$7,364,233 in 1917 to \$6,565,337 in 1918. Silver production, almost totally incidental to the gold industry, dropped from 186,765 ounces 159,202 ounces. Smelting ore and concentrates shipped from South Dakota carried 64,806 pounds of copper and 53,408 pounds of lead.

South Dakota has produced from 1876 to 1918, inclusive, \$214,084,159 in gold and 6,593,705 ounces of silver.

At the Homestake mine, which produces the greater part of South Dakota's gold, shortage of labor in 1918 curtailed both development and mining operations. The Homestake mills were operated at full capacity up to October 27, and at 71 per cent of full capacity for the remainder of the year. Owing to increased costs for labor and supplies, and to a lowering of the grade of ore available, the Golden Reward mill and mines were operated at reduced capacity for the first three months and then ceased operations. The Trojan and Mogul mills were operated the entire year. The Bismarck mill was operated a few months.

In Custer County, the Spokane concentration mill, near Keystone, was completed and put into operation.

In Pennington County, the Maloney Blue Lead mine was operated a part of the year producing a small quantity of copper, but this copper production was the greatest quantity produced in the Black Hills since 1909.

TEXAS.

Texas mines in 1918 yielded 576,565 ounces of silver, and small quantities of gold, copper, and lead.

Since the beginning of mining in Texas in 1885 the output of silver has been 14,243,691 fine ounces with a commercial value of \$9,764,427. The greater part of this silver has come from the Presidio silver mine, in the Shafter district, Presidio County. The ore from this mine was for many years treated by the patio method, but in recent years by the cyanide process.

In 1918 the Presidio mine continued to produce at approximately its regular annual rate. From the Allamoore-Sierra Blanca district, Hudspeth County, was shipped copper and lead ore; and a car of copper ore was shipped from the Benjamin district, Knox County.

UTAH.

The value of the gold, silver, copper, lead, and zinc in Utah in 1918 was \$86,047,597. This represents a decrease of \$13,280,558 from that of 1917, which was \$99,328,155. The decrease was general, but that of silver was small. As the price of silver was considerably higher in 1918, the value of the State output of silver increased \$2,348,791.

The gold output was valued at \$2,949,170, a decrease of \$405,986 from that of 1917. Of this total, Salt Lake County produced \$2,083,254 in gold and Juab County produced \$628,593. Separated as to source, copper ore was most important, containing gold valued at \$1,570,234. Lead ore supplied in gold \$418,098; lead-zinc ore, \$485,333; siliceous ore, \$471,637; copper-lead ore, \$2,459; zinc ore, \$41; and placers, \$1,368. Utah is unlike the neighboring States in that it produces nearly all of its gold from ore and concentrate smelted, very little gold coming from ores treated by amalgamation or cyanidation. Concentrates of various kinds produced gold valued at \$1,561,157, of which the copper concentrates contained \$1,044,306 and the lead concentrates \$494,812. The value of the gold in crude ore shipped to smelters was \$1,346,531, of which \$525,113 in gold came from copper ore. There was only \$4,205 in gold from gold and silver bullion. The remainder had its source in ore leached or old tailings shipped or treated. Considerably less gold was produced from copper ores and lead ores in 1918 than in 1917, which accounts for the large decrease in the output of the State. In 1918 eight mines in Utah each produced gold valued at more than \$50,000. These were the Utah Copper Co., which produced more than \$1,000,000 in gold, the United States Mining Co., Utah Consolidated, Centennial-Eureka, Grand Central, Chief Consolidated, Mammoth, and Eagle & Blue Bell mines. The first three mines are situated at Bingham and the others are in the Tintic district.

The silver output of Utah decreased slightly, from 13,479,133 ounces in 1917 to 13,455,597 ounces in 1918, or 23,536 ounces. Utah held the record of being the largest silver-producing State in 1917, but in 1918 the silver production from Montana was greater. Juab County produced 4,994,806 ounces of silver; Salt Lake County, 3,022,638 ounces; and Summit County, 2,061,392 ounces. Separated as to source, the silver came principally from lead ore, which supplied 6,672,725 ounces. Siliceous ore supplied 3,987,068 ounces; copper ore, 1,445,559 ounces; lead-zinc ore, 1,243,638 ounces; and copper-lead ore, 106,377 ounces. Crude ore shipped to smelters supplied 10,612,588 ounces; concentrates, 2,316,766 ounces; and gold and silver bullion, only 4,525 ounces. From ore leached and from tailings and slag smelted or treated, 521,703 ounces were produced. The Tintic district, in Juab and Utah Counties, produced 6,681,644 ounces, against 5,558,763 ounces in 1917. The Bingham district of Salt Lake County produced 2,437,758 ounces, and the Park City region, in Summit and Wasatch Counties, 2,572,586 ounces. Nine mines in Utah produced more than 500,000 ounces of silver each in 1918. These were the Chief Consolidated, Tintic Standard, Ontario, United States Mining Co., Utah Apex, Eagle & Blue Bell, Iron Blossom, Utah Copper, and Judge mines.

The copper production decreased from 246,674,153 pounds in 1917 to 227,169,630 pounds in 1918. The deep mines also produced

167,998,224 pounds of lead and 18,399,417 pounds of recoverable zinc, a much smaller yield in both metals than in 1917.

There were 250 producing properties in 1918, of which 3 were placer mines and the remainder deep mines. The ore output decreased from 15,358,481 tons in 1917 to 14,705,718 tons in 1918. Most of this, or 13,071,152 tons, was concentrated, making 803,021 tons of concentrates. There were 967,597 tons of crude ore shipped to smelters, and only 1,012 tons were treated in gold and silver mills. Four smelting plants were active at Murray, Midvale, Garfield, and International, Utah.

WASHINGTON.

The production of gold, silver, copper, lead, and zinc in Washington in 1918 had a total value of \$1,467,421, a decrease of \$821,864 from the production of 1917. There was a small increase in silver, but decided decreases in lead, zinc, gold, and copper. The mines of Washington were affected partly by the increased expenses, which were general in mining districts, and partly by the difficulties experienced at the Canadian smelters.

The gold output had a value of \$304,658, a decrease of \$187,666, or more than 38 per cent. Ferry County, including the Republic district, was the largest gold producer, with \$276,066, and Whatcom County contributed \$9,987 in gold, a decided decrease. Most of the gold, or \$291,625, came from siliceous ore, principally from the Republic district. Copper ore supplied only \$9,588 in gold, and placers, \$3,430. Lead ore was not an important source. Gold contained in crude ore shipped was valued at \$282,415; gold in bullion, \$11,707; and gold in concentrates, \$7,106. In the last 59 years the average yearly output of gold in Washington was about \$470,000, which is small compared with other Western States. The Last Chance mine at Republic was the largest gold producer in 1918, followed by the Surprise-Lone-Pine-Pearl, Knob Hill, and San Poil mines.

The silver output in 1918 was 310,093 ounces, an increase of 27,773 ounces. Stevens County was the main silver producer, with 168,669 ounces, and Ferry County followed closely. Of the total silver, 149,858 ounces had its source in copper ore, 156,772 ounces came from siliceous ores, 3,418 ounces from lead ores, and a few ounces from placers. Concentrates contained 105,860 ounces of silver; shipping ore, 203,964 ounces; and ores treated in gold and silver mills, only 224 ounces. Eighty per cent of the silver in 1918 was produced by 5 mines. In order of output, they were the United Copper, Surprise-Lone-Pine-Pearl, Last Chance, Deer Trail, and Knob Hill mines.

There were 10 placers and 74 deep-producing mines. The latter, in addition to gold and silver, produced 1,922,406 pounds of copper, 5,271,815 pounds of lead, and 38,873 pounds of recoverable zinc. The quantity of ore sold or treated was 138,911 tons, a decrease of 23,208 tons. Of this quantity, 64,938 tons were shipped directly, 72,951 tons were concentrated, and 1,022 tons were treated in amalgamation or cyanidation mills.

WYOMING.

The metal mines of Wyoming during 1918 produced only \$871 in gold, 965 ounces of silver, and 852,777 pounds of copper. There was no placer gold production in 1918.

The Hartville district, Platte County, maintained its place as the principal producing district, despite the falling off of shipments of

copper-silver ore from the Sunrise mine. The Rambler copper-platinum property at Holmes was operated only half of the year. Several cars of copper ore were shipped by the Atlas Copper Co. from Tie Siding. Small shipments of copper ore were made from the Encampment district and from the Hecla district, and several cars of copper ore were shipped from the Copper Mountain district.

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1918, BY STATES.

The Bureau of the Mint and the Geological Survey have issued the following joint statement of the final compilation of the production of gold and silver in the United States during the calendar year 1918:

State or Territory.	Gold.		Silver.	
	Ounces.	Value.	Ounces.	Value.
Alaska.....	455,920	\$9,424,700	802,743	\$787,057
Alabama.....	34	700	2	2
Arizona.....	270,078	5,583,000	6,831,465	6,697,978
California.....	811,945	16,784,400	1,432,812	1,404,815
Colorado.....	615,558	12,724,700	6,900,266	6,765,435
Georgia.....	218	4,500	45	44
Idaho.....	33,930	701,400	9,396,009	9,212,411
Illinois.....			8,218	8,057
Maine.....	34	700	6,338	6,214
Maryland.....			164	161
Michigan.....			516,294	506,206
Missouri.....	3	60	42,214	41,389
Montana.....	158,704	3,280,700	16,378,263	16,058,232

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792.

The production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining, statistics, and since by Director of the Mint.]

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1918.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the mint at Philadelphia and the United States assay office at New York hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1918, with the class of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended Dec. 31, 1918.

Material used.	Gold issued (value).			Silver issued (weight).		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Fine ozs.</i>	<i>Fine ozs.</i>	<i>Fine ozs.</i>
Bullion, old plate, etc.....	45, 103, 600	3, 806, 140	48, 909, 740	439, 388	35, 735, 864	36, 175, 252
United States coin.....		860, 498	860, 498		677	677
Total.....	45, 103, 600	4, 666, 638	49, 770, 238	439, 388	35, 736, 541	36, 175, 929

Estimating that the total amount of gold coin used in the arts during the calendar year 1918 has been \$3,500,000, and silver coin \$100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was \$52,409,740 and of silver 36,252,596 fine ounces.

In order to arrive at the net consumption in the industrial arts there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included in the private refinery returns and also the same class of material returned to monetary use. In the year 1918 these amounts aggregated \$19,517,345 in gold and 9,530,263 fine ounces in silver, which leaves \$32,892,395 of gold and 26,722,333 fine ounces of silver as the net amount of new bullion devoted to industrial use.

Gold furnished for use in manufactures and the arts and classification of the materials used, by calendar years, since 1880.

MISCELLANEOUS DATA CONCERNING DISPOSITION OF GOLD AND SILVER DURING 1918.

GOVERNMENT CONTROL.

On September 7, 1917, under authority of the espionage act of June 15, 1917, the export of coin, bullion, and currency was placed under the control of a gold export committee of the Federal Reserve board, and on September 9, 1918, the sale of gold bars by the mints and assay offices was restricted by an order of the Secretary of the Treasury under authority of the act of March 3, 1891, to specific authorizations of the War Industries Board as regards industrial use, and the Federal Reserve Board as regards bullion destined for export. Restrictions on the industrial use of gold and silver were discontinued in March, 1919; licenses for the export of silver were freely granted after May 6, 1919, and for the export of gold after June 8, 1919.

ISSUE OF FINE GOLD BARS FOR GOLD COIN AND GOLD BULLION.

The value of the fine gold bars furnished to the trade in exchange for gold coin and bullion, monthly, by the United States mints at Philadelphia, San Francisco, and Denver, and assay office at New York, for the calendar year 1918 was as follows:

Exchanged for gold coin.

Months.	Philadelphia.	San Francisco.	Denver.	New York.	Total.

LOSSES AND GAINS ON WITHDRAWN COIN.

The loss on face value of gold coin totaling \$24,830,936.50 withdrawn from circulation during the fiscal year 1919 was \$309,292.28, of which \$12,882.12 was reimbursable from the appropriation provided for that purpose. The loss on face value of subsidiary silver coin totaling \$681,126.95 withdrawn from circulation was \$46,972.98, all being reimbursable from the appropriation provided. On silver dollars withdrawn totaling \$191,369,000 the loss, all of which is reimbursable from appropriations, was \$43,375,044.02; this does not include \$140 face value of Hawaiian silver dollars, the loss on which, \$1.91, was reimbursable from appropriations. The reimbursable loss, provided for by appropriation, on minor coin totaling \$125,962.81 withdrawn during the fiscal year was \$7,573.18.

The gain on recoinage of 1,000,000 standard silver dollars into subsidiary coin was \$68,599.12, and on other silver coin there was a small gain of \$5.01.

Standard silver dollars converted to bullion under the act of Apr. 23, 1918.

Items.	Philadelphia Mint.	San Francisco Mint.	New York assay office.	Total.
Sources of coins converted to bullion:				
Mint stock.....	\$58,534,554.00	\$39,001,000.00		\$97,535,554.00
Transferred from Treasury at Washington.....	87,686,000.00	25,000,000.00		112,686,000.00
Transferred from subtreasury at New York.....			\$26,500,000.00	26,500,000.00
Transferred from mint at New Orleans.....	12,400,000.00	10,000,000.00		22,400,000.00
Face value of dollars converted for sale.....	158,620,554.00	74,001,000.00	26,500,000.00	259,121,554.00
Fine ounces sold the British Government at \$1 per ounce.....	122,527,558.54	57,176,287.40	20,328,479.70	200,032,325.64
Loss by conversion and sale.....				59,089,228.36
Face value of dollars allocated to Director of the Mint for manufacture of subsidiary coin.....		1,000,000.00		1,000,000.00
Fine ounces obtained for subsidiary coin at \$1.....		772,997.89		772,997.89
Loss by conversion for subsidiary coin.....				227,002.11
Subsidiary coining value of bullion obtained from above 1,000,000 standard dollars.....				1,068,599.12
Seigniorage (profit on coinage) on same.....				295,601.23
Net profit in converting 1,000,000 standard silver dollars to subsidiary coin.....				68,599.12
Receipts incident to the work of conversion.....				3,338,215.98
Abrasion on the entire lot, consisting of both circulated and uncirculated coin.....				371,768.97
Melting and other costs reimbursed to mint service appropriations.....				149,350.75
Incidental costs payable from the receipts.....				2,564.40
Amount available to meet the expenses of replacement (refining and recoinage).....				2,814,531.86

NOTE.—Conversion operations were begun Apr. 24, 1918, and discontinued May 10, 1919.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin (since 1883).

¹Imports of United States gold coin not separately given prior to the fiscal year 1878.

United States gold coin and gold bullion exported from the port of New York to Europe during the fiscal year 1919.

Date.	Destination.	Description.	Amount.	Prevailing rate of exchange.
1918. July 11	Spain.....	United States coin.....	\$10,000	4.7535
1919. June 17	France.....	Bullion.....	100,311	4.605
18	do.....	do.....	124,000	4.615
18	England.....	do.....	246,905	4.615
23	Spain.....	United States coin.....	325,000	4.6075
25	do.....	do.....	8,700,000	4.5925
25	Italy.....	do.....	60,000	4.5925
25	Sweden.....	Bullion.....	661	4.5925
27	Spain.....	United States coin.....	250,000	4.595
28	England.....	Bullion.....	102,639	4.595
			9,919,516	

Classification of gold exports, fiscal year 1919.

Country to which exported.	United States coin.	Bullion.	Total.
Spain.....	\$9,285,000		\$9,285,000
Italy.....	60,000		60,000
France.....		\$224,311	224,311
England.....		349,544	349,544
Sweden.....		661	661
Total.....	9,345,000	574,516	9,919,516
Exports to other points:			
United States coin.....		60,457,246	
Bullion.....		5,249,299	
Foreign coin.....		21,000	
Total.....			65,727,545
Grand total gold exports from port of New York.....			75,647,061

Gold imports at the port of New York, fiscal year 1919.

From Europe:		
Foreign bullion.....		\$8,363
From other points:		
Foreign bullion.....	\$5,784,901	
Bullion in ore.....	147,522	
Total.....		5,932,423
Grand total gold imports at port of New York.....		5,940,786

Coinage of the mints of the United States, authority for coining, changes in weight and fineness, act discontinuing same, and amount coined for each denomination of coin since organization, 1792, to June 30, 1919.

Denomination.	Act authorizing coinage or change in weight or fineness.	Weight (grains).	Fineness.	Pieces.	Total amount coined to June 30, 1919.
GOLD COINS.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (3£ 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

NOTE.—Later figures are not available.

Total in Canadian reserves	125, 646, 995

THE COURSE OF SILVER.

The following review of the London market for silver during the calendar year 1918 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

In giving a retrospect of the silver market for the past year it must be remembered that the conditions have been quite abnormal, so many restrictions having been in force which have prevented the market from responding to the usual influences. In the early part of the year these restrictions were not so much felt as later, and a good deal of business in silver was done, but all through the year the allied Governments have been needing silver to such an extent as to overshadow all private dealings.

The lowest price of the year was 42½d. at the end of February; the highest figure quoted was 49½d., which remained without variation for a very long time.

At the opening in January the market price was 43½d. per ounce standard, but within a few days it improved to 45½d., chiefly on account of purchases for China. There was then a lull, and the price gradually subsided to 42½d. at the end of February, at which time the usual China new year holidays caused a cessation of buying for about a fortnight, but from this point the quotation rose steadily, and by March 20 was again at 43½d.

During these three months Indian and English mint requirements were large and continuous, and as these seemed likely to go on, arrangements began to be discussed with a view to make available the large amount of dollars held in the United States of America under the Sherman Act, and various proposals were advanced as to how this was to be done. It being generally believed that a higher rate would be fixed than was at that time current, the price of silver in London improved very materially, and the quotation went to 46d. a few days later. Then came the announcement that an act of the American Congress had been passed providing for the release at \$1 per ounce fine of \$350,000,000 held in the United States Treasury, with the provision that the Government should acquire silver from the producers at the same price, to replace the silver thus apportioned, whenever it was convenient to do so. The effect of this measure in London was to increase the price to 49½d. per ounce standard, the parity of the American price of \$1 plus the cost of bringing the silver to Europe, which price lasted for a week, but was modified slightly as some variation in the cost of insurance and other charges allowed silver to be sold a little lower, and 49½d., 48½d., and 48½d. were quoted successively until August 21.

The exchanges in China now rose considerably, and purchases were made for shipment from San Francisco above the dollar per ounce, making some further action necessary, and the selling price was altered to 101½ cents, the equivalent of 49½d. per ounce standard in England, and notice was given in the Official Gazette that this figure was the maximum price at which silver might be dealt in. Our quotation therefore remained at 49½d. without alteration from August 21 to November 8. The China exchange remained, however, above the silver parity, but no silver could any longer be shipped thither without licenses from the American Government, which licenses were unable to be obtained.

For some time previous similar restrictions on trade were made in London, and licenses to ship silver to any quarter abroad were refused, and in India neither imports nor exports were permitted except on Government account.

The signing of the armistice (November 11) and the consequent cessation of danger from submarine attack reduced the war risk of insurance New York to London from £2 to 2s. 6d. per cent, so that it was possible to bring silver to London at a smaller expense, and on November 12 the silver quotation was reduced to 48½d., which figure was notified as the new maximum to be observed in silver transactions, and a further reduction for a similar reason took place on December 6, from which date until the end of the year the price was quoted at 48 7/16d.

All through the year but little private business in silver was possible, and, indeed, almost the whole trade recently has been confined to the requirements of silversmiths in this country, and although orders were received from other countries none of them could be executed, the interdict on speculative operations having continued throughout the year. The reason for all these measures was the great need of silver for coinage by the Indian and home Governments for currency, and also for France, Italy, and America, and if it had not been for the use of the large quantity of dollars released by the United States Government it is difficult to see how it could have been met.

Since the commencement of the war no particulars have been published by the board of trade of the imports and exports of the precious metals, and therefore it is impossible to estimate correctly the amount of silver which has been converted into

currency during that time. It is known, however, to have been very large, and has practically absorbed all the stocks which were in existence before, with the exception of the balance of the United States dollars referred to above.

In prewar times large amounts of silver were shipped to India and consumed internally, but such shipments being stopped, the native habit in time of prosperity of investing their savings in silver articles has not been possible, and there is no doubt that rupees have been hoarded largely for the same purpose, which is a partial explanation of the great demand for these coins. The increased expenditure for war purposes to finance the expeditions in Eastern Asia is, of course, a further and much greater influence, and some time may still elapse before this expenditure ceases.

In any attempt to forecast the future of silver there are many important points to consider. The high prices of nearly every commodity, including silver, have been brought about by the four and one-half years of war, now happily concluded, and it is assumed by some that with the cessation of hostilities prices will fall again. This is only partially true, and at any rate a considerable time must pass before the process is very noticeable, but confining our attention to our own commodity, it is extremely doubtful if we may look for any fall except such as may arise from a lower rate of freight between New York and London.

Owing to the partial failure of the monsoon in India, it is possible that rupees may be returned to the Treasury, as the result of hoarded coins being brought into circulation to purchase the necessities of life, which would obviate the necessity of so much new coinage in India as has been found requisite during the war, but it must be remembered that the area for the circulation of rupees has been greatly increased as these coins have become a convenient monetary basis of Central Asia, Syria, and North and East Africa, and as these countries are, or will probably become, large centers of corn and other production under British management, some deficiency in India will be made up by the harvests of those lands, and coinage in India may be expected to continue still. It is most unlikely that there will be any demonetization of coinage in that quarter.

It is confidently believed that with a free market China will be a large buyer, and inasmuch as no silver has been obtainable by any of the other countries for so long, there is every probability of requirements there also.

The English mint has been coining heavily, but here again we expect a continued demand, in view of a treasury note issue outstanding of above £300,000,000, the mere changing facilities.

Not only in England, but in all other European countries, the tremendous war expenditure has resulted in gigantic issues of paper money, for which a metallic reserve has to be built up, and inasmuch as the production of gold is limited, it becomes a question whether it may not be necessary to associate silver with it on a fixed basis. The conditions of the world of to-day are so different from those when the bimetallic theory was abandoned that old arguments no longer apply.

We have said above that stocks have all been absorbed, with the sole exception of silver dollars left of those made available by special statute in America; probably nearly half of the \$350,000,000 has been utilized, but if only \$125,000,000 have to be replaced, which represents nearly 100,000,000 fine ounces, the entire production of the United States for more than a year would be required, and as their measure requires the United States Government to buy this silver at \$1 per ounce, the price can hardly fall below that figure.

A high price, however, stimulates production, and the political position of Mexico is so much improved that we may expect next year a greater output than has been the case for a long time. Mexico, Canada, and Australia are other sources from which supplies may be looked for, but it is to be noticed that the United States act requiring purchases of silver at \$1 applies only to their home production and to the smelting establishments in the United States. If, therefore, other countries require silver also, it is possible that the producers in Mexico and elsewhere may be unwilling to sell except at a higher rate, especially if the demand becomes urgent.

The prevailing opinion, therefore, is that a relaxation of Government control, whenever that takes place, may result in the price of silver rising to a still higher level than we have seen it during the past year.

Highest, lowest, and average price of silver bullion in London, and the United States equivalent value of a fine ounce each month.

Average commercial ratio of silver to gold each calendar year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cablegrams from London to the Bureau of the Mint, from 1897 to 1917 from daily London quotations, and since from daily New York quotations.]

VALUES OF FOREIGN COINS.

The following values, calculated by the Director of the Mint, were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1919:

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks. ¹	
Argentine Republic....	Gold.....	Peso.....	\$0.9648	Currency: Depreciated paper, convertible at 44 per cent of face value; exchange rate about \$0.425.	
Austria-Hungary.....	do.....	Krone.....	.2026	Exchange rate about \$0.0225=1 krone.	
Belgium.....	Gold and silver.	Franc.....	.1930	Member Latin Union; gold is actual standard. Exchange value \$0.115.	
Bolivia.....	Gold.....	Boliviano.....	.3893	12½ bolivianos equal 1 pound sterling. Exchange rate about \$0.33.	
Brazil.....	do.....	Milreis.....	.5462	Currency: Government paper; exchange rate about \$0.255 to the milreis.	
British colonies in Australasia and Africa.	do.....	Pound sterling.....	4.8665		
Canada.....	do.....	Dollar.....	1.0000		
Central American States:					
Costa Rica.....	do.....	Colon.....	.4653	Exchange rate \$0.25=1 colon.	
British Honduras.....	do.....	Dollar.....	1.0000		
Nicaragua.....	do.....	Cordoba.....	1.0000	Exchange rate \$0.995.	
Guatemala.....	Silver.....	Peso.....	.8078	Guatemala: Currency, inconvertible paper; exchange rate about \$0.40.	
Honduras.....				Honduras: Currency, bank notes; exchange rate about \$0.55.	
Salvador.....				Salvador: Currency, bank notes convertible into silver on demand; exchange rate about \$0.48.	
Chile.....	Gold.....	do.....	.3650	Currency: Inconvertible paper; exchange rate about \$0.195.	
China.....	Silver.....	Tael.....	Amoy.....	1.3236	The tael is a unit of weight; not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael.
			Canton.....	1.3196	
			Chefoo.....	1.2659	
			Chin Kiang.....	1.2930	
			Fuchau.....	1.2243

MONETARY LEGISLATION.

[PUBLIC—No. 244—65TH CONGRESS.]

[H. R. 12998.]

AN ACT To amend section thirty-five hundred and twenty-eight of the Revised Statutes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section thirty-five hundred and twenty-eight of the Revised Statutes be, and the same is hereby, amended so as to read as follows:

"SEC. 3528. For the purchase of metal for the minor coinage, authorized by this Act, a sum not exceeding \$400,000 in lawful money of the United States shall, upon the recommendation of the Director of the Mint and in such sums as he may designate, with the approval of the Secretary of the Treasury, be transferred to the credit of the superintendents of the mints at Philadelphia, San Francisco, and Denver, at which establishments, until otherwise provided by law, such coinage shall be carried on. The superintendents, with the approval of the Director of the Mint as to price, terms, and quantity shall purchase the metal required for such coinage by public advertisement, and the lowest and best bid shall be accepted, the fineness of the metals to be determined on the mint assay. The gain arising from the coinage of such metals into coin of a nominal value, exceeding the cost thereof, shall be credited to the special fund denominated the minor coinage profit fund; and this fund shall be charged with the wastage incurred in such coinage, and with the cost of distributing said coins, as hereinafter provided. The balance remaining to the credit of this fund, and any balance of the profits accrued from minor coinage under former Acts, shall be, from time to time, and at least twice a year, covered into the Treasury of the United States."

Approved, December 2, 1918.

FOREIGN AND WORLD MONETARY STATISTICS.

The statistics of foreign countries on production, import, and export of gold and silver, coinage and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics.

Receipts of replies to the interrogatories have been limited or delayed in transmission and the available data for the calendar year 1918 are incomplete.

It has been possible, however, to prepare fairly complete comparative tables for 1916 and 1917. Incomplete tables for 1918 are also printed, the tables following the other foreign data herewith.

NORTH AMERICA.

CANADA.

COINAGE OF OTTAWA MINT FOR 1918.

[From the Numismatist, April, 1919.]

The following table shows the coinage executed at the royal mint at Ottawa, Canada, for 1918, as reported by Deputy Master James Bonar:

Denomination.	Number of pieces.	Nominal value.
FOR CANADA.		
Silver:		
50 cents.....	832,805	\$416,402.50
25 cents.....	4,167,533	1,041,883.25

Penny.....	187,728	3,754.56
Halfpenny.....	248,717	2,487.17
Farthing.....	206,516	1,032.58
Total.....	642,961	7,274.31

OTTAWA MINT OPERATIONS.

[From the Numismatist, May, 1919.]

Since the outbreak of the war quantities of gold coin and gold bullion to the value of \$1,300,000,000 have been received at Ottawa by the department of finance as trustee for the Imperial Government and the Bank of England. The work of the royal mint, Ottawa, which is a branch of the royal mint, London, has been greatly increased by war conditions. When the large deposits of gold referred to above were received by the department of finance it was necessary that the value should be ascertained and that a certain quantity of gold should be refined. The heavy demand on the gold refinery at the mint led to the construction in eight weeks of a second plant with a monthly output of a million ounces of fine gold. Through this extension this refinery has developed the largest capacity of any gold refinery in the world. (According to the Commercial and Financial Chronicle of Aug. 24, 1918, the gold bullion received for refining totaled 15,992,770 ounces gross, and the bars produced totaled 14,048,803 ounces fine, valued at \$290,414,547; there was also a recovery of 1,175,500 ounces fine of silver.) In 1918, 4,197,600 shilling blanks were produced for the royal mint, London.

NEW 1-CENT PIECE.

A resolution has been passed in Canada providing for a new 1-cent piece, smaller than the present one. The weight of the present coin is $87\frac{1}{2}$ grains, and the weight of the new coin will be 50 grains. The present coin weighs 80 to the pound, while the new coin will weigh 140 to the pound. It will approximate the American bronze cent, which weighs 48 grains. It will be a little larger than the 10-cent silver piece, and thinner, so that it will be easily distinguished by the touch. The old 1-cent piece will continue in force and the new one will be issued by proclamation. It is not intended to withdraw the present 1-cent piece from circulation, but as it becomes worn it will be redeemed.

PRODUCTION OF GOLD AND SILVER.

[From Commerce Reports, Jan. 21, 1919]

During the calendar year 1918, Canada produced gold valued at \$14,750,000; silver, 20,800,000 ounces; against the production of 1917, gold \$15,279,292; silver, 22,221,276 ounces.

PRICE OF SILVER FIXED BY CANADA.

[Commercial and Financial Chronicle, Aug. 31, 1918.]

Ottawa press advices of August 28 state that Canada has followed the United States in stabilizing the price of silver at the maximum of \$1.01½ per ounce. A new regulation has been issued prohibiting, except under license, the export of coin, bullion, or bars. The order-in-council, it is said, states that serious difficulties have arisen in connection with the purchase of silver which is urgently needed for coinage by the allied Governments and recites the steps taken by the United States and the British Governments.

COMPARATIVE STATEMENT OF CANADIAN BANKS.

[From the Commercial and Financial Chronicle, New York, Feb. 1, 1919. Figures for 1917 from Australasian Insurance and Banking Record, April, 1919.]

	Dec. 31, 1918.	Dec. 31, 1917.	June 30, 1914.

THE CENTRAL GOLD RESERVES.

[From Samuel Montagu & Co., London, Apr. 17, 1919.]

The central gold reserves deposited by the Canadian banks stood as follows:

Items.	Dec. 31, 1918.	Dec. 31, 1915.
Gold.....	\$10,500,000	\$6,210,000
Dominion notes.....	120,400,000	11,150,000
Total.....	130,900,000	17,360,000

BRITISH GOLD RESERVE IN CANADA.

[From the Commercial and Financial Chronicle, New York, June 14, 1919.]

The New York Tribune in its issue of Sunday last, June 8, states:
 "A total of \$12,000,000 in gold has already been shipped to New York so far, and it is understood that the movement will amount to \$50,000,000.

"According to information obtained from Canadian sources there is a gold reserve in excess of \$200,000,000 at Ottawa to the credit of the British treasury. This metal has been accumulating there since early in the war. Before the United States entered the war hundreds of millions of gold was shipped to New York from this Canadian reserve. After we entered the war and the United States Government adopted liberal credit policy toward all of the Allies the gold shipments ceased. But the gold produced in the South African fields continued to be shipped to Canada, where it has steadily accumulated.

"A banker in close touch with the situation said last week that while official information on that point was lacking, it was safe to assume that the British Government had adopted a policy of paying a portion of its current obligations in gold. How much of the metal England could spare at this time depended, of course, he said, upon the extent of her reserve."

EXTENSION OF ORDER PERMITTING BANKS TO ISSUE NOTES IN EXCESS OF CAPITAL—
RATIO OF GOLD TO CIRCULATION.

[From the Commercial and Financial Chronicle, New York, Apr. 26, 1919.]

In the Monthly Commercial Letter for April the Canadian Bank of Commerce (head office, Toronto) states that the Canadian Parliament has consented to extend, for a period of two years after the conclusion of peace, the order in council issued in September, 1914, which permits each bank to issue notes in excess of its paid-up capital to the extent of 15 per cent of its combined capital and reserve. The bank also says:

"In discussing the resolution submitted in respect to this subject, Sir Thomas White expressed the opinion that the ratio of gold to circulation in Canada was a favorable one as compared with other countries. His hope, however, was that all such regulations could be safely removed before the expiration of the period mentioned.

"At the end of July, 1914, just at the outbreak of war, the total amount of gold held by the banks and the Government was \$143,754,000, or 70 per cent of the notes outstanding, which amounted to \$205,264,000, the amount of the Dominion notes held in the central gold reserve being almost negligible. At the end of January last the gold held had increased by \$63,151,000 and was thus 48.3 per cent of the notes outstanding (always excepting the Dominion notes in the central gold reserve). On the other hand, taking into consideration the total of Dominion notes, including those in the central gold reserve, and of bank notes issued at the end of January last, the ratio of gold notes was 39.6 per cent as compared with 69 per cent in July, 1914. In Britain at the end of December last the ratio of gold to notes outstanding was 25.6 per cent and in the United States 65.7 per cent. The Federal treasury of Australia has issued notes amounting to £57,035,000, against which it holds 40.4 per cent, or £23,238,000 in gold. While Canada's ratio of gold to currency compares favorably with that of the average belligerent country, her circulation per capita is relatively high. In view of this and similar expansion in Britain and the United States, the minister of finance has taken power to continue restrictions as to the export of gold. 'Generally speaking,' the minister stated in Parliament, 'it has been the policy and is the policy of the Government to cancel restrictions and regulations just as rapidly as in our judgment the national interests of the country will permit.'"

LAWS AFFECTING THE CURRENCY.

By decree of October 31, 1918, the coinage of gold pieces of 2½ pesos and 2 pesos was authorized. Their weight and fineness to be proportionate to the gold coins of other denominations theretofore authorized.

By decree of November 13, 1918, the coinage of new silver coins was authorized. The text follows:

"Decree fixing the standard of silver coins, issued by the President of Mexico, November 13, 1918, and published in the *Diario Oficial*, Mexico City, November 14, 1918, occasioned by the rise in the price of silver and the consequent sale and hoarding of silver coins by the people:

"ARTICLE 1. The theoretical unit of the monetary system of the United Mexican States shall continue to be, exclusively, the gold peso of 75 centigrams of pure gold, established under article 1 of the law of March 25, 1905.

"ART. 2. The coinage of the old silver peso, preserved under said article 1 of the law stated, will definitely be discontinued, and as from the date of this decree shall no longer be considered as legal tender.

"ART. 3. The silver coins referred to in article 2 of the said law of March 25, 1905, shall continue to be the following: 1 peso; 50 centavos; 20 centavos; 10 centavos. All these coins shall have a fineness of 0.800 and 0.200 of copper, and shall be considered as fractional of the gold coins created by the law cited, its additions and reforms.

"ART. 4. The specifications of the new coins shall be:

Denomination.	Weight.	Weight tolerance.	Diameter.	Fineness.	Fineness tolerance.	Pure silver.	United States equivalent.
	<i>Grams.</i>	<i>Grams.</i>	<i>Mm.</i>	<i>Thou-sandths.</i>	<i>Thou-sandths.</i>	<i>Grams.</i>	
Peso.....	18.1250	0.1	34	800	0.004	14.5000	\$0.4985
50 centavos (tostones).....	9.0625	0.1	27	800	0.004	7.2500	.2492
20 centavos (quintos).....	3.6250	0.1	19	800	0.004	2.9000	.0997
10 centavos (décimos).....	1.8125	0.1	15	800	0.004	1.4500	.0498

"ART. 5. The margin of fineness for all coins above mentioned shall be 0.004, approximately, with respect to the theoretical fineness of 0.800.

"The margin of variation in weight per unit shall be 1 decigram, more or less, for all coins.

"ART. 6. All the inhabitants of the Republic shall have the right to present the fractional currency created under article 3 of this law, at the offices stipulated by the department of hacienda (finance) and public credit, in exchange for gold coin when presented in sums of 20 pesos or more.

"ART. 7. All the coins created by this law are of restricted purchasing power and their acceptance in single payments is obligatory for not more than 20 pesos.

"ART. 8. All the coins created by this law shall be received by the State in payment of taxes, duties, services, etc., in unlimited quantities and at par with gold.

"ART. 9. The exportation or melting of former fractional currency is strictly forbidden on penalty of confiscation of the coins attempted to be exported or which may have been melted.

TRANSITORY.

"ART. 1. The law of March 25, 1905, relative to the monetary régime shall remain in effect in so far as it does not conflict with this law.

"ART. 2. Only the silver coins of 50, 20, and 10 centavos created by the law of March 25, 1905, shall continue to have the same purchasing power granted them by the said law during such time as may be necessary by reason of the change brought about by the issuance of the new coins. When the Executive shall consider that the market is sufficiently supplied he shall issue such ruling as may be necessary with a view to provide that the said old coins no longer have purchasing power and are to be considered as simple pieces of silver.

"Done in Mexico City, November 13, 1918."

MEXICO ON GOLD BASIS.

[From the Commercial and Financial Chronicle, New York, Nov. 16, 1918.]

Telegraphic advices to the daily press from Mexico City under date of November 13 in stating that President Carranza had on that date signed a decree reforming the monetary system of Mexico by replacing it on a strictly gold basis, said:

The recent monetary crisis was caused by the exportation of silver half-peso pieces, which, as the result of the high price of silver, were worth more as bullion than as coin. Business has been seriously handicapped for a fortnight by the scarcity of change. Under the new decree peso and half-peso pieces will be coined with less silver in them, making their exportation profitless.

New gold coins now being minted are worth two and one-half pesos. Millions of pesos in silver and half-peso pieces, called "tostones," recently have disappeared

from circulation. These have been demonetized to prevent speculation in the new pesos. It will be illegal for any one to give more than 20 pesos of them as change.

RECOINAGE OF SILVER.

Concerning the recoinage of Mexcian silver, a special cablegram to the New York Times from Mexico City on November 9 said:

The Mexican Government has ordered the recoinage of all silver pesos and half pesos into coins of less value. The recoinage is ordered to avoid the exportation of pesos due to the high price of silver.

During the past few weeks half pesos have disappeared from circulation. Small gold coins valued at two and half pesos will be issued for circulation on Tuesday.

MEXICAN EXCHANGE ON NEW YORK IN 1918.

[Trade Commissioner Edward F. Feely, Mexico City, Jan. 22, in Commerce Reports, Feb. 26, 1919.]

According to a statement prepared by one of the local banking institutions, there was in the main but slight fluctuations throughout the year 1918 in the exchange rate on New York, the rate having been about the same at the end of the year as it was on January 2, 1918, viz, \$0.5250 United States currency equals 1 peso, Mexican currency.

During the year 1918 the highest rate at which the peso was quoted in Mexico City was \$0.51 on the 19th and the 21st of October, and the lowest point reached was \$0.6075 on April 3. The extremes of exchange value in 1917 were \$0.4975 on July 18 and \$0.58 on October 6.

The maximum and minimum rates of exchange in United States currency for each month in 1918 were as follows:

Month.	Maximum.	Minimum.	Month.	Maximum.	Minimum.
January.....	\$0.5225	\$0.5425	July.....	\$0.5600	\$0.5937
February.....	.5250	.5450	August.....	.5525	.5700
March.....	.5400	.5775	September.....	.5200	.5562
April.....	.5600	.6075	October.....	.5100	.5375
May.....	.5787	.5987	November.....	.5175	.5400
June.....	.5550	.5875	December.....	.5225	.5350

From the above table it will be seen that the rate of exchange fell off gradually from \$0.5225 in January to \$0.6075 in the month of April, then gradually strengthened until on October 21, at the termination of the Liberty Loan campaign, it had risen to \$0.51, and after falling off slightly during the month of November came back on December 31 to \$0.5250.

SHORTAGE OF CURRENCY.

[From Supplement to Commerce Reports, Apr. 3, 1918.]

The year 1917 was characterized by a movement in Government circles in favor of paper money, and it is generally understood that the first issue of paper money may be expected early in 1918.

At present only gold, silver, and copper are in circulation in Mexico. That the country is without sufficient circulating medium is generally understood. American money in considerable quantities is now in circulation in northern Mexico as a result; in the interior, however, American money is not accepted.

MINTAGE.

[From Bulletin of the Pan American Union, February, 1919.]

From December, 1916, to July, 1918, the mintage amounted to 93,900,000 pesos, a sum without parallel in the coinage of money in the Republic. From February 11 to July 30, 1918, the money coined amounted to 26,000,000 gold pesos and 440,000 pesos in silver coins. This is larger than the coinage of the period from 1909 to 1915.

UNITED STATES GOLD COINS LEGAL TENDER IN WESTERN MEXICO.

[From the Numismatist, June, 1918.]

A press dispatch from Mexico, dated May 10, says that "the Mexican cabinet has approved a law making American gold coins legal tender in the States of Sonora and Sinaloa, in western Mexico."

METALLIC CURRENCY IN MEXICO, DECEMBER, 1918.

[From the Numismatist, December, 1918, p. 471.]

The United States Committee on Public Information, Mexico section, makes public the following in the Weekly News Bulletin:

"It is estimated that the present stock of metallic currency in the Republic is \$250,000,000, although there is a constant diminution of silver, owing to the fraudulent exportation of such coin because of its higher bullion value in foreign countries."

UNSTABLE FINANCIAL CONDITIONS IN CHIHUAHUA.

[Consul James B. Stewart, Mar. 10, 1919. In Supplement to Commerce Reports, Apr. 28, 1919.]

Metallic money (gold, silver, and small change) was very scarce throughout the year, but the Mexican Government's decree requiring the import, in gold coin, of 25 per cent of the value of all silver bullion exported from the country improved the situation. The Mexican gold peso was worth 59 cents United States currency in July, but by December it had dropped to 52 cents. The scarcity of Mexican silver coin was caused by its having been smuggled out of the country, as the prevailing high price of the metal made the coin worth more as bullion than as a medium of exchange.

A premium of 3 to 4 per cent was paid for nickel and copper coins, which worked a hardship for a time on the small retail merchants. The importation of American money by the large mining and smelting companies for the payment of wages changed this condition, and before the end of the year more than half of the money in circulation was American. This reacted on the poor, however, as the dollar was discounted by the merchants, who, besides making a profit on their goods, made another on exchange, as nearly all articles were purchased in the United States. About December 1 the new silver peso and half peso (minted by the Government), with the silver content much reduced, began to arrive in Chihuahua in small quantities.

MONETARY SITUATION IN MONTEREY.

[Consul Wilbur T. Gracey, Monterey, Mexico, Feb. 4, 1919.]

The city of Monterey has certain characteristics which are not found in other Mexican cities. It is so near the border of the United States, and so many of its people have been educated in the United States and go to San Antonio, Tex., for the various supplies that they need, that the life of the city has become closely associated with the United States, so much so that probably 75 per cent of the better class of people speak English as well as Spanish.

DOLLAR THE BASIS OF EXCHANGE IN MONTEREY.

Another interesting point is that instead of the peso being the basis of exchange, as it is farther south in Saltillo and San Luis Potosi and other cities not far from Monterey, the dollar is the basis of exchange, and it is the peso which fluctuates, the dollar being the stable factor. This is doubtless due to the fact that nearly everything that is bought for resale comes from the United States, and, in addition, at present practically the entire credit system of that part of northern Mexico is derived from the United States, with the dollar the basis of all important transactions, the unit of bank deposits, etc.

For many years, and until the influx of paper money, United States currency passed in Monterey at the rate of two Mexican pesos for one American dollar, and both moneys were used indiscriminately in all business transactions.

During the revolutionary period the only stable factor was the American dollar, and when Mexico returned to a metal basis the old rate of two for one was again in force. Most of the local firms still accept United States money at the old rate, although, so far as the banks are concerned, exchange has fluctuated within the last few months from 53 to 57 cents as the value in United States money of the peso, or from 1.75 pesos to 1.85 pesos for an American dollar, which is approximately the same rate quoted in the cities farther south and on the border.

Local banks state that these prices are what they have to pay for the peso in stable currency, which is the American dollar, the premium on the peso being due to the scarcity of Mexican currency and its demand in commerce. In other words, the peso has an exaggerated value because it is needed as a medium of exchange and the coin is scarce. In addition, the fact that the silver contained in Mexican silver coins is worth 57 cents to the peso has given this value to Mexican currency as bullion.

During the past two months there has been a very great scarcity of small change in the Monterey market, as in other parts of Mexico, and consequently even the smaller native stores selling foodstuffs, etc., have been obliged to accept United States currency at the rate of two for one.

NEW ISSUE OF SILVER MONEY TO PROVIDE SUBSIDIARY COINAGE.

Two months ago the almost complete disappearance of subsidiary coinage created a most serious monetary situation, which was somewhat relieved by the arrival of a new issue of silver money based upon a peso containing about 39 cents' worth of silver (United States currency).

The Mexican dollar formerly in use contained about 80 per cent pure silver and 20 per cent bronze alloy, and at the present time the value of these in Monterey is about 71½ cents United States currency. The half pesos, which were minted both before and after Mexico went on a gold basis, are worth 57½ cents United States currency, in Monterey, and the smaller subsidiary coins of 10 and 20 cents, of proportionate value with the pesos.

There is a law in force against the exportation of Mexican silver coins, except under certain conditions, but notwithstanding that, it is reported that large quantities of coins and bullion melted from them have been smuggled across the Rio Grande.

The monetary decree of November 13, 1918, added a new element to the complications of local exchange by the withdrawal of the old pesos in circulation and the issuance of new pesos and smaller silver subsidiary coins. Large quantities of these coins were thrown on the market and thousands of the old dollars which had been hoarded were brought out and sold as silver.

The new peso is about three-fourths of the size of the old one and weighs about 18½ grams, of which 14½ grams are pure silver. The value of its silver contents is about 39 cents as against 59 cents which two of the previous 50-cent pieces were worth. Very recently a large quantity of the new issue of 50-cent pieces have arrived, which are understood to contain one-half of the quantity of silver of the peso, and similar subsidiary coins are to follow. These coins are redeemable in Mexican gold.

The standard coin currency of Mexico is gold, and the silver coins therefore only have their value through the promise of the Mexican Government to redeem them at any time.

The interesting point at the present time in regard to this currency is that owing to the shortage of small coins, while Mexican gold can be secured at a rate of 53 to 53½ cents American currency for the peso, the same value in subsidiary coin costs 56½ to 57 cents. This, of course, greatly confuses the payment of accounts, and it is very difficult to find shops that are willing to carry any quantity of change at a 3 to 3½ per cent premium.

In order to modify this situation the Mexican Government has undertaken the issuance of gold pieces of 2½ pesos, slightly larger than the \$1 gold pieces formerly seen in the United States. It is said that the monetary commission, which is the Government body in control of the situation and of the mint, is charging a premium.

The present monetary situation in Monterey has therefore resolved itself into pricing Mexican money on figures based on the demand for it as a commodity, with little relation to the current rates of exchange. It is believed locally that if the Mexican Government is successful in getting this new subsidiary coin accepted in Monterey at its face value, that it will be only a short time when United States money will be worth two for one, as it was previously.

EMBARGO ON GOLD AND SILVER.

[In Commerce Reports, Mar. 27, 1918.]

By decree of March 22, 1918, the Mexican Government prohibits the exportation of silver bars. Silver pesos may be exported only on condition that an equal commercial value of gold bullion is imported at the same time for coinage at the mint. Domestic and foreign gold bullion and coin can be imported free from duties. All customs and tax collectors are instructed not to accept United States paper currency in payment of duties or taxes.

DECREE RESTRICTING SILVER REIMPORTATION ABOLISHED.

[From the Commercial and Financial Chronicle, New York, Nov. 9, 1918.]

A special copyright cable to the New York Times from Mexico City under date of October 31 reported that the decree relative to the exportation of silver requiring the reimportation of 25 per cent of gold coin has been abolished. Government mines, according to the cable, may export silver without restrictions.

BRITISH WEST INDIES—KINGSTON AND JAMAICA.

The data on the monetary stock of these colonies during the year ended December 31, 1917, can not be supplied.

The import of silver coin from the United Kingdom during the year ended December 31, 1917, was £26,200 (\$127,502).

The export of gold coin to the United States of America during the year 1917 was £190 (\$925).

CUBA.

LAWS AFFECTING THE CURRENCY.

[From Boletín Oficial de la Secretaría de Hacienda, Habana, April, 1919.]

By decree No. 1504 of October 4, 1917, the export of gold and silver coin and bullion, also of paper money and Government securities, was prohibited, except under license issued by the treasury department.

DOMINICAN REPUBLIC (SANTO DOMINGO).

The amount of silver coin withdrawn from monetary use during the year ended December 31, 1918, was \$25 United States money.

MINING AN IMPORTANT INDUSTRY.

[Consul Benjamin F. Chase, San Jose, in Supplement to Commerce Reports, Nov. 19, 1918.]

The second industry of importance in Costa Rica is that of gold and silver mining on the Pacific slope. The mines vary in size and importance and give direct employment to approximately 1,200 men, those occupying the chief positions being Americans, as the mines are generally American owned. The Abangarez gold field is well equipped, has a stamp mill of 60 stamps and a cyanide plant. The largest of the mines has a depth of about 400 feet to the lowest level now worked. Other levels are being opened and other strata of ore being found. The ore from this mine is carried to the stamp mill, a distance of 6,400 feet, by an aerial rail line, which has carried 7,000 tons of dry ore a month. This mine is being worked at a profit because of the low standard of wages prevailing in Costa Rica. Other mines of some importance are the Aguacate, La Union, and La Trinidad. Mining has been carried on here for about 40 years, and it is the opinion of some that a further like period will be required to exhaust the supply of ore.

The average rate of exchange on New York for the year 1916 was 3.54 colons per dollar and in 1917, 4.77 colons per dollar. No reduction is made of the above amounts because the transactions were internal. The purchasing power of the colon had fallen, but not in comparison with the difference in foreign exchange.

The constantly fluctuating rate of exchange for the year, rising from about 3.65 colons per dollar in January to above 5.30 in December (1917) prevented unnecessary foreign buying, as the custom of time payment made it uncertain as to the rate for the purchase of drafts. This resulted in some of the stores adopting the dollar for sales, based on the exchange of the day, some covering by buying drafts at once.

GUATEMALA.

The production during the year ended December 31, 1918, was: Gold, \$7,132; silver, 165 pounds (1,980 ounces).

The stock of national paper money on December 31, 1918, was \$240,000,000.

The premium on gold for 1918 was: Highest, 41 to 1; lowest, 29.70 to 1; average, 35.50 to 1.

HONDURAS.

THE GOLD STANDARD IN HONDURAS.

[Consul Francis J. Dyer, Tegucigalpa, Apr. 3, in Commerce Reports, May 8, 1918.]

Honduras has taken a step toward adopting the gold standard, fixing the rate of exchange at two to one. After a year's trial of the new system it is expected that the country will be prepared to go on a permanent gold basis. The following translation of the agreement between the Government of Honduras and the Banco Atlantida

will indicate the scope of the plan, which provides the Government with ready cash, to meet pressing current claims, in the form of a 200,000 peso checking account:

"Tegucigalpa, March 21, 1918.—The President decrees: To approve in all its parts the contract that says: 'Eugenio Molina, Sub-Secretary of the Public Treasury, duly authorized, who will hereafter be called the Government, on one part, and Gen. Juan Rius Rivera, person of legal age, and resident of the city of New Orleans, United States of America, on the other, in the name of and representing the Banco Atlantida, instituted and established in the city of La Ceiba, that will be called the Banco Atlantida in the future, have agreed to celebrate the following contract:

"1. The Banco Atlantida opens to the Government a credit in account current of 200,000 pesos silver with an interest of 6 per cent annually, liquidable every six months.

"2. The Government is obliged to receive the bills of the Banco Atlantida in payment of 50 per cent of the customs duties which are actually collected in silver, the same in equal proportion, in all classes of fiscal imposts and purchase of monopolized specie. The other 50 per cent will be received in current silver or in American money at the rate of two for one.

"3. The Banco Atlantida will establish agencies in the ports of the Republic, in the departmental capitals, and in the districts where commercial movement demands it, and will change there their proper bills at the option of the bearer, in current silver, in American money, or in bank drafts at two for one, as long as the quotation of soles (pesos) in New York is not under 53 cents. This license will be governed in the payments that they make in American money in the fiscal offices. The Banco Atlantida engages not to charge more than one-fourth of 1 per cent as commission for the transmission of funds for the bank drafts as referred to in this article. This contract will commence to operate from the 1st day of April, 1918, and will have one year of duration, and may be extended by mutual consent between the parties on giving two months' notice before the expiration of the agreement."

The Banco Atlantida will at once increase its capital by \$250,000, and it will open a number of new branches. As its paper issue now has the backing of the Government, the bank plans to increase the issue, storing the silver coinage of the country as a reserve to guarantee the paper issue. As far as practicable United States silver will be introduced in exchange for Honduran silver, at the rate of \$1 of the former for \$2 of the latter. This plan has been in operation for some time on the north coast of Honduras, where it has operated to the seeming satisfaction of all concerned.

THE MONETARY SITUATION.

[From the Bankers' Magazine, London, November, 1918.]

The acting British consul at Tegucigalpa, writing to the Trade Board Journal, says that on April 1 last American bank notes commenced to circulate in Honduras, as the result of an arrangement between the Government and the Banco Atlantida. This arrangement had been in operation for some time on the north coast, and was extended on the above date to the whole Republic, the Government receiving the Banco Atlantida's notes as national currency for the payment of all taxes and duties. In order to help the Government over a financial crisis, the bank loaned it 350,000 dollars gold, and the bank agreed to establish a fixed rate of exchange of two to one (two silver pesos to each dollar gold). The bank then put into circulation 1,000,000 pesos notes fully guaranteed, exchangeable either for silver at par or for American bank notes at two to one or for drafts on the United States at the same rate. A short time after this arrangement had been in operation certain difficulties arose, as the banks would not change American notes for silver at par, the persons receiving these notes therefore losing on the transaction. In order to remedy this, a decree was passed on August 8 making American money legal tender in Honduras at the exchange of two to one. The money is now circulating and the banks are not obliged any longer to change their own notes for silver. Notes formerly payable on demand with silver are now cashed for American gold, the banks thus being enabled to retain the stocks of silver they have in their vaults. As far as possible everybody is hoarding silver, which is going quickly out of circulation, as a silver peso sells for 80 to 90 cents in the United States, whereas it is worth only 50 cents at the exchange of two to one in Honduras. In spite of all Government precautions, silver is being clandestinely exported. As this was bound to happen, it is better for the country to have a circulation of American paper money than to have a paper currency which was valueless outside the Republic, and which would quickly have become debased. For example, in Guatemala, which has a paper currency, the exchange at present is 40 paper pesos for a gold dollar, whereas in 1916 it stood at 12 paper pesos for the United States dollar.

The subscribed capital of the Banco Atlantida was formerly 500,000 dollars gold, of which 250,000 dollars was paid up, the reserve fund amounting to 125,000 dollars gold. Arrangements were made in March last to increase the subscribed capital to 1,000,000 dollars gold, and the paid-up capital to 500,000 dollars gold, the reserve fund being at the time 250,000 dollars gold. In addition to the head office of the bank at Ceiba and branches at San Pedro Sula, Puerto Cortes, and Tegucigalpa, the bank is opening a branch at Amapala, and agencies in all other towns in the Republic.

ESTABLISHMENT OF BANK OF ISSUE.

[From Bulletin of the Pan American Union, July, 1918.]

The Congress of Honduras has authorized the President of the Republic to establish a bank of issue, deposit and discount, to be known as the Banco de la Republica de Honduras, with a capital of a million pesos silver (silver peso=\$0.6918), 50 per cent of which is to be subscribed by the State and 50 per cent to be raised from the sale of stock to the public. The bank is empowered to issue bank notes up to double the amount of its paid-up capital, but shall never place in circulation a greater sum than twice the amount of its gold and silver coin on hand. Time and sight deposits received by the bank shall be guaranteed by a gold and silver reserve of not less than 50 per cent of the amount of said deposits, as well as by commercial paper representing a value of one-half of the amount of the deposits. The bank bills placed in circulation shall represent national silver coin, and shall be issued in denominations of 1, 5, 10, 20, 50, and 100 pesos each. These bills are legal tender in the payment of national and municipal taxes and other dues. On the expiration of concessions granted to other banks in the Republic allowing the issuance of bank notes, said permission will not be extended and the Bank of the Republic of Honduras will become the sole bank of issue of the country.

UNITED STATES CURRENCY DECLARED LEGAL TENDER.

[From the Bulletin of the Pan American Union, October, 1918.]

On August 8, 1918, the President of the Republic made United States coin and paper currency a legal tender throughout the country and fixed the rate of exchange at 200 per cent.

LEGALIZATION OF AMERICAN CURRENCY.

[From Bulletin of the Pan American Union, May, 1919.]

On January 24 the national congress approved a presidential decree of August 8, 1918, by which American money and bank notes are declared legal currency.

NICARAGUA.

Exports of gold and silver during the year ended Dec. 31, 1918.

[All figures stated in United States dollars.]

Country to which exported.	Gold.		Silver.		
	Bullion.	Ore.	Coin.	Bullion.	Ore.
United States of America.....	\$102,997	\$1,086,711	\$265,652	\$16,940	\$210,683

MONEY IN CIRCULATION.

[From Bulletin of the Pan American Union, February, 1919.]

At the close of 1918 the money in circulation in the Republic amounted to 2,960,000 cordobas (cordoba=\$1). In addition to this sum the guaranty fund on deposit in New York on the date mentioned was \$1,300,000.

THE MONETARY UNIT OF NICARAGUA.

[Consul John O. Sanders, Bluefields, Feb. 8, in Commerce Reports, Apr. 8, 1919.]

Prior to 1913 the unit of value in Nicaragua was the sol of Peru (\$4.8665 United States currency). Nicaragua itself minted no coin of a larger denomination than a peseta (\$0.20), but the monetary unit of practically every Latin-American country circulated here, and, regardless of its actual name, was called a sol. As a matter of fact, the usual name was peso, and whether it was a Mexican coin or a Guatemalan, or a Honduran, or a Chilean in Nicaragua its purchasing value was the same and consequently merely a sol.

In 1912 it seemed that the American bankers who became interested in the collection of the customs in Nicaragua conceived the idea of giving Nicaragua a new unit of value equal to the American dollar, so a new coin was minted, called the córdoba, with a par value of the dollar. The córdoba looks very much like any one of the many other silver coins which the country was used to, and to a large majority of the population it was, and still is, simply another sol, and consequently has little or no more purchasing power. The same is true when the American manufacturer undertakes to purchase raw material in this country.

From the standpoint of trade, as well as from the standpoint of policy, it would be worth while to endeavor to have the unit of value for Nicaragua put back at least to where it was under the sol. The average Nicaraguan has a dislike for the córdoba, but has a strong feeling of sentiment for the sol.

PANAMA.

The amount of silver withdrawn from monetary use during the year ended December 31, 1918, was 88,000 balboas (\$88,000). There are no data available as to the amount of gold and silver used in the industrial arts during the calendar year 1918.

The only Panamanian currency is silver and nickel coin, of which it is estimated that less than 250,000 balboas (\$250,000) remain in circulation. The banks hold less than 50,000 balboas (\$50,000) of such coin. United States notes and silver at present constitute practically the entire circulation of the country.

No record is kept of the imports of gold and silver through customhouses; but the Panama Canal Zone pays a part of its employees in United States currency, and a considerable portion of the amount so paid comes into the Republic of Panama in the course of trade.

Exports of gold and silver during the year ended Dec. 31, 1918.

PANAMA SILVER PESOS EXPORTED TO UNITED STATES.

[From the Numismatist, February, 1918.]

In accordance with plans formed some time ago for retiring silver pesos of the Republic of Panama to the value of \$1,000,000 gold, the Government has taken advantage of the present high price of silver by exporting to the United States through the port of Cristobal-Colon 600,000 silver pesos, for which it will receive in return something more than \$300,000 in United States currency.

SALVADOR.

During the calendar year 1918 the United States struck for Salvador 1,000,000 5-centavo nickel pieces, of the face value of 50,000 pesos (\$37,677).

NOTE.—Conversion rate, 1 peso = \$0.7535+.

Small amounts of foreign gold coin were used in making jewelry, but it is impossible to obtain definite figures covering consumption in the arts.

Production of gold and silver during the year ended Dec. 31, 1918.

Source of production.	Gold.		Silver.

Character of stock.	In banks. ¹	In circulation.	Total used for monetary purposes.
Gold coin (United States dollars).....	756,636		
Silver coin (Salvadorean pesos).....	4,959,622		
Notes of banks of issue (pesos).....	2,266,384	14,183,616	16,450,000

¹ The gold and silver coin in the banks is the metal reserve of 40 per cent which the banks must have to guarantee their bank notes. This coin is in the banks' vaults under Government seal.

At the beginning of the European war the silver, which is the actual circulating medium in normal times, was withdrawn from circulation and deposited in the vaults of the three banks of emission under Government seal. This was done to prevent the silver from leaving the country and being sold abroad at a very profitable price.

CURRENCY OF THE COUNTRY.

The actual currency of the country to-day is bank notes issued by three banks. These notes are guaranteed by silver and gold coin to the amount of 40 per cent. Nickel coins of 1, 3, and 5 centavos are also used as currency.

PREMIUM ON GOLD FOR 1918.

Highest premium, gold drafts, 169 per cent; lowest premium, 104 per cent; average premium, 149 per cent.

During the first nine months of the year 1918, the monthly average of the rate of exchange on gold drafts varied from 163 per cent premium to 151 per cent premium.

During the last three months of the year 1918 exchange rapidly declined and reached the low point of 104 per cent premium for \$1, gold draft, at the close of the year.

American Treasury, Federal-reserve and national-bank notes were at a premium of 10 per cent over gold drafts.

American gold coins were at a premium of 200 per cent over the Salvadorean peso, or, in other words, a rate of exchange of 3 pesos Salvadorean currency for \$1 United States gold coin.

The Salvadorean silver peso, which is no longer in circulation, was worth approximately 73 cents United States money in December, 1918, according to the market price of silver.

Exports of gold and silver during the year ended Dec. 31, 1918.

COINAGE AUTHORIZED FOR SALVADOR.

[From the Numismatist, February, 1918.]

The National Assembly of Salvador has authorized the executive to order the coinage of 100,000 pesos in nickel pieces of the value of 0.05 peso each. (The exchange rate of the Salvadorean peso was quoted at 45 cents on April 1.) This coinage is demanded, says the legislative decree in *Diario Oficial*, by the present scarcity of fractional currency.

SOUTH AMERICA.

ARGENTINA.

There was no domestic gold or silver coinage during the year ended December 31, 1918.

The gold coin withdrawn from monetary use during the year was: Two hundred and four 20-reichsmark pieces, or 4,080 marks (\$972), and forty-eight 10-reichsmark pieces, or 480 marks (\$114).

Coinage executed at Buenos Aires for Uruguay during the year ended Dec. 31, 1918.

¹ Includes \$7,560,000 in British pounds.

The exports of gold coin during the year ended December 31, 1918, amounted to 85,466 pesos (\$82,458).

NOTE.—The export of gold coin is prohibited by law, authorization being granted only for sums taken out of the country by travelers and amounts required to pay maritime freight and fares, according to law No. 9483.

NICKEL COINAGE.

[From the Bulletin of the Pan American Union, August, 1918.]

The Argentine Embassy in Washington has been authorized by the Government to have dies made for the minting of 15,175,000 nickel coins of the denomination of 20 centavos, 25,823,334 of the denomination of 10 centavos, and 23,600,000 of the denomination of 5 centavos. These coins are to be cast by the Argentine mint in accordance with the provisions of law 3321 of December 4, 1895, and will be placed in circulation by the conversion bank, as provided for in law 3504 of September 20, 1896.

FINANCES.

[From Bulletin of the Pan American Union, February, 1919.]

During the war Argentina increased its store of gold by about 50 per cent. Estimates made by the conversion office (caja de conversión) are as follows:

	Pesos.		Pesos.
1913.....	294,934,755	1916.....	350,179,783
1914.....	274,668,964	1917.....	373,909,545
1915.....	332,557,899	1918.....	436,000,000

In each case the estimate is of December 31, except for 1918, when it is of November 30. The Argentine gold peso in United States values is worth 96.48 cents, so that the 436,000,000 pesos represents nearly \$421,000,000 United States.

The bulk of Argentine gold is held by the conversion office as guaranty for the national paper circulation. The amount of gold so held and the circulation for the six years was:

Year.	Gold.	Paper circulation.	Proportional guaranty.
	Pesos.	Pesos.	Per cent.
1913.....	233,197,716	823,263,045	72.6
1914.....	224,405,298	803,820,275	63.5
1915.....	305,636,048	987,645,615	67.1
1916.....	316,835,326	1,013,098,518	71.0
1917.....	316,852,151	1,013,136,757	71.0
1918.....	379,032,643	1,154,454,054	74.6

The guaranty is on the issue and redemption value of the paper peso at 44 per cent of its face value, in gold (i. e., the paper peso has a value fixed by law, at which value it circulates and is redeemed in gold of 100 pesos paper, equal to 44 pesos gold). The guaranty is of its redemption value, which for the outstanding circulation on November 30, 1918, of 1,154,454,054 pesos, amounts to 507,959,784 pesos, of which the gold reserve is 74.6 per cent.

Deducting the amount held by the conversion office from the estimate first given of 436,000,000 pesos gold, there remains in Argentina, available for commercial purposes, without any contraction of the paper currency, a stock of about 56,000,000 pesos gold, equivalent in United States values to about \$54,000,000.

CEDULAS, OR BONDS TO BEARER, IN CIRCULATION.

[By Consul General W. Henry Robertson, Buenos Aires, Nov. 26, 1917, in Supplement to Commerce Reports, Feb. 23, 1918.]

The Banco Hipotecario Nacional (National Mortgage Bank) was founded in 1886 with power to grant loans by means of the issue of so-called cédulas, or bonds to bearer, in the place of cash to persons mortgaging their properties to the bank. These bonds always find a ready market in the exchanges. According to the bank's annual report for 1916, on December 31 of that year the cédulas in circulation represented a valuation of \$217,814,312, par value, the cash on hand equalled \$16,771,376, and the reserve fund, \$17,428,296.

The loans in force at the end of 1916 amounted to \$236,393.192 in paper cedulas, \$3,647,091 in gold cedulas convertible into paper, and \$66,025 in gold cedulas.

BOLIVIA.

All silver coin withdrawn from monetary use was presumably exported as merchandise on account of high prices.

Coinage executed in England for Bolivia during the year ended Dec. 31, 1918.

Denomination.	Pieces.	Value.

LAWS AFFECTING THE CURRENCY.

By budget law No. 3446 of October 31, 1917, article 73, the President of Brazil was authorized to control the exportation of gold, silver, etc., in coin or bullion, or in the form of works of art.

Subsequently, by order No. 316 of November 13, 1917, the minister of finance prohibited the exportation of gold and silver, and other precious metals. The text of this order is as follows:

"To the customs officials of Brazil: The inspector of customs hereby renews the verbal orders given to the effect that the greatest care be exercised in preventing the exportation of packages containing precious metals, coined or not, the search for

such metals to be extended to parcels containing other merchandise, when, by their weight or other suspicious circumstances, a doubt should arise as to their real nature."

This order was authorized by the decree of the Brazilian Government No. 3361 of October 26, 1917, which declared a state of war with Germany and authorized the President of the Republic to take the necessary defensive measures.

Decree No. 12963 of April 10, 1918, authorized the issue of paper money against the caixa de conversão notes belonging to the treasury (authorized by budget law of December 31, 1917, No. 3446, article 1, under "renda extraordinária"):

"ARTICLE 1. The minister of finance is authorized to issue up to the sum of milreis 60,000,000 of treasury notes, corresponding to the value of the caixa de conversão notes acquired by the Government and now deposited with the Bank of Brazil.

"ART. 2. The metallic guaranty fund in the caixa de conversão (guaranteeing the said issue) shall be entered into account as 'guaranty fund for the issue of paper money.'

"ART. 3. The notes of the caixa de conversão referred to in article 1 shall be incinerated in the proportion of the issue.

"ART. 4. All previous provisions in this respect are hereby canceled.

"WENCESLAU BRAZ.

"Rio de Janeiro, April 10, 1918.

"Published in the Diário Oficial, April 30, 1918."

Decree No. 3546 of October 2, 1918, authorized the increase of paper money provided for by decree No. 12962 of April 10, 1918.

The President of the United States of Brazil makes known that the National Congress decreed and sanctioned the following resolution:

"ARTICLE 1. The executive power was authorized—

"(1) To increase the issue referred to in the decree of April 10, 1918, to five times the value of the metallic gold reserve referred to therein, at the exchange rate of 27 pence per milreis.

"(2) To issue notes against the full amount of gold held in the treasury, or which may be acquired by it.

"(3) To issue notes against the full amount of gold held abroad for the account of the treasury.

"SECTION 1. The gold referred to in articles 1 and 2 shall be carried on the account of the guaranty fund and shall be deposited in the amortization office (caixa de amortização) under the personal guard and responsibility of the inspector and treasurer who shall permit no part of it to be taken therefrom, except by special authority, under the penalty prescribed in article 4 of decree No. 6267 of December 13, 1906.

"SEC. 2. The notes referred to under 3 above shall be incinerated in the same proportion as withdrawals are made from the gold against which they were issued.

"ART. 2. The present decree annuls all previous measures on this subject.

"Rio de Janeiro, October 2, 1918."

Decree No. 3545 of October 2, 1918, authorized the President of the Republic to open a credit of 10,000 milreis (paper) for the following purposes:

"(a) To change the inscription of the minor silver and nickel coins, the same to preserve their present weight and description.

"(b) To coin 50-reis and 20-reis nickel pieces, their weight to be 3 and 2 grams, respectively, their diameter, 17 and 15½ millimeters."

The President of the Republic is also authorized to withdraw the nickel coins put into circulation by decree 1817 of September 3, 1870, and 4822 of November 18, 1871, as well as to withdraw the 40, 20, and 10 reis bronze (copper) coins, the period for their withdrawal to be fixed.

MONETARY CONDITIONS DURING THE WAR.

[In Commerce Reports, Aug. 26, 1918.]

Throughout the war Brazil has been on an inconvertible paper money basis, having issued since August 26, 1914, 800,000,000 milreis, making the total circulation on December 31, 1917, 1,389,414,967 milreis. The foreign exchanges have thus been subject to all the fluctuation which is inherent in every inconvertible paper situation, of which the most interesting instance is Chile. With the Chilean par of exchange set by law at 18d. in 1898, the average rate for 1903 was 16.6d., and by 1913 it had fallen to 9.8d. From that point, as a result of conditions due to the war, it rose to 15½ in April, 1918, an appreciation of 66½ per cent in the value of the Chilean peso. Large emissions of paper have precisely the same effect on the rate of exchange as does an unfavorable trade balance. They affect unfavorably the ratio between the domestic paper and foreign gold moneys, by increasing the supply of the former relatively to the demand for it, and thus cause its depreciation in terms of foreign gold.

BRITISH GUIANA—GEORGETOWN.

The silver coinage executed in England for British Guiana during the year ended December 31, 1917, was \$5,760.

The domestic silver coin withdrawn from monetary use during the year 1917 was £1,017 13s. 4d. (\$4,952).

The gold production from placer mining during the calendar year 1917 was 780.9467 kilograms fine (25,108 ounces fine), value at £106,652 (\$519,022).

NATIONAL FUNDS DEPOSITED ABROAD.

[From Bulletin of the Pan American Union, April, 1919.]

According to a report of the minister of the treasury by the 31st of December, 1918, the following national funds were deposited by the Government: In London, £2,909,097; letters of credit payable, £715,010; in the United States, \$1,437,602; in the mint, 2,904,846 pesos gold, and in fiscal treasuries of the Republic, 52,674,025 pesos in paper and 519,855 pesos gold.

NEW MONETARY LAW.

[From Bulletin of the Pan American Union, September, 1918.]

Since the promulgation of the recently published financial law of Chile, the mint commission will issue bills to any persons upon request, at the deposit of 18 cents in gold per dollar, which transaction must take place at the fiscal treasury at Santiago. The certificates which the issuing agency will give for the deposits may be payable to the bearer or upon order.

CONVERSION FUND.

[From Bulletin of the Pan American Union, March, 1919.]

The total amount of the conversion fund, which on December 31, 1917, was 94,144,558 gold pesos, rose on January 1, 1919, to approximately 110,000,000 gold pesos.

VALUE OF CHILEAN PAPER PESO IN 1917.

[By Consul General L. J. Keena, Valparaiso, Feb. 12, 1918, in Commerce Reports, Mar. 27, 1918.]

The Chilean gold peso is equivalent to \$0.365 United States currency; the Chilean paper peso is variable in value, exchange during the latter half of 1917 having fluctuated from \$0.25 to \$0.30.

COLOMBIA.

LAWS AFFECTING THE CURRENCY.

Law 3 of July 16, 1918, amending law 64 of 1917, on the exchange of notes of the old issue:

"The Congress of Colombia decrees:

"ARTICLE 1. The notes representing paper money, lawfully issued, which remained in circulation after June 30 of the present year (1918), will continue to be received until June 30, 1919, in payment of any sort made to the national treasury in the proportion of 1 peso paper money for 1 centavo gold.

"ART. 2. During the period established by the preceding article the conversion board (junta de conversión) will continue to exchange paper notes for gold notes at the rate of 100 pesos paper for 1 peso gold.

"The conversion board will supply the general treasury with the necessary notes for the exchange, and the treasury in turn will pass them to the administrators of the national finances.

"Done at Bogotá, July 16, 1918.

"Published in the Diario Oficial, Bogotá, July 18, 1918."

NOTE.—Colombian gold notes are issued by the conversion board against actual gold held in reserve to the amount of 100 per cent. The gold reserve fund held in the conversion office for the conversion of the old paper money into gold notes is accumulated and guaranteed by—

1. Two per cent of the customs duties.
2. The proceeds from the lease of the various gold mines.
3. The yearly output of the emerald mines of Muzo and Coscuez.
4. The profits from coinage.

5. The revenue from the concession of the right to issue bank notes.

6. The surplus of the revenues over expenditures of the national government for each fiscal year.

Law 15 of September 10, 1918, on coinage and recoinage of money and power to the executive:

"The Congress of Colombia decrees:

"ARTICLE 1. The government is hereby authorized to execute nickel coinage to meet the needs of the nation until the maximum of 2,000,000 pesos shall have been put into circulation.

"ART. 2. Authority is hereby also given for the recoinage of worn and imperfect national nickel coins issued in 1904 and after.

"ART. 3. The nickel coins executed in fulfillment of this law shall have the weight, alloy, and impression determined by the Fiscal Code and by Decree 58 of 1917.

"ART. 4. The Government will determine in each case what amount of money shall be coined in each of the values permitted by the Fiscal Code, and will supply the mint with the dies needed for the coinage.

"ART. 5. The Government can have the coinage and recoinage authorized by the present law executed at the Bogotá and Medellín mints, or at foreign mints.

"ART. 6. Until the day of the reopening of Congress for its 1919 sessions the executive shall be vested with the special authority to suppress, regulate, and restrict the export of gold and other metals of national production and to secure from other States reciprocal and temporary commercial concessions to facilitate the interchange of national products and materials needed for the home consumption of the country. In case the Government exercises the power to restrict the export of metals, it shall buy whatever quantities are offered to it at the market price, which it shall sell again when necessary, for the adjustment of foreign exchange.

"ART. 7. For the immediate execution by the Government of article 2 of law 65 of 1916 the maximum amount of 100,000 pesos gold is hereby assigned from the funds now in the hands of the conversion board, and the said board shall be reimbursed of the above amount from the money received by the Treasury for the nickel coinage authorized by the present law.

"ART. 8. As soon as the mints at Bogotá and Medellín are ready for regular operations the conversion board, using the funds it has on hand, shall buy at par all the gold bars available at Bogotá and Medellín, as per respective assay certificates, in exchange for currency money, deducting the cost of coinage, and this gold will be coined at the aforesaid mints for the conversion board.

"ART. 9. Any person may deposit at the Bogotá and Medellín mints duly assayed gold bars and receive therefor certificates of deposit representing the real value of the gold deposited reduced to Colombian money.

"ART. 10. The certificates of deposit will be issued in series of 2½, 5, 10, 20, 50, and 100 pesos, which will be received at their face value for all payments made to the national treasury.

"ART. 11. These certificates will be redeemed at the mints, giving gold coin or bars therefor.

"ART. 12. The edge and cord of the gold and silver coins shall be the same as those of the silver and gold national coins struck and placed into circulation in 1911 and after.

"Done at Bogota, September 10, 1918.

"Published in the Diario Oficial, Bogota, September 12, 1918."

Law 24 of October 3, 1918, amending law 65 of 1916, on the exchange of silver in Narino:

"The Congress of Colombia decrees:

"ART. 1. The Government is hereby authorized, on the recommendation of the conversion board, to change the rates fixed by article 4 of law 64 of 1916, on the exchange of old silver coins, in case of important changes in the price of the said metal. The increase or decrease hereby authorized shall not exceed the maximum of 10 per cent.

"ART. 2. The Government will investigate what amount of deteriorated silver coins and coins less than 900 fine is circulating in the Department of Narino, and according to the findings will fix the rates of exchange within the established limits.

"ART. 3. The conversion board will make partial remittances monthly to the general treasury of the Republic in quantities approximately equal to the quantities of silver already used for coinage and to be used for that purpose by the Medellín mint, in order to execute the second part of article 6 of law 65 of 1916.

"Done at Bogota, October 3, 1918, and published in the Diario Oficial, Bogota, October 4, 1918."

NOTE.—The junta de conversión (conversion board) is an official, autonomous board created by congress to take charge of all monetary matters in Colombia.

By a law passed October 25, 1903, Colombia adopted the gold standard. Under the laws of June 15, 1907, and December 2, 1912, the monetary unit is the gold peso, containing 1.5976 grams 0.916 $\frac{2}{3}$ fine, equal to one-fifth of a pound sterling and of proportionate weight thereto, the fineness being the same as that of the pound sterling.

The coinage of Colombian gold pieces was started in 1913 at the Medellin mint, and has been continued ever since. The actual currency of the country is composed of Colombian gold (about \$5,000,000), silver (about \$6,500,000), and nickel (about \$1,500,000) coins, and a little over \$10,000,000 in Government notes, the further issue of which has been prohibited by the national constitution. These notes have replaced the old issues of inconvertible paper money, and there is a conversion fund fixed by law and handled by an autonomous monetary board (*junta de conversión*).

NOTE.—All silver coins issued before 1911 (0.900, 0.835, 0.666, and 0.500 fine) are being withdrawn from circulation to be recoined in pieces 0.900 fine.

American gold coins circulate at par. English gold, 1 $\frac{1}{2}$ per cent discount.

DISCOUNT ON GOLD FOR 1918.

Checks on New York: Highest discount, 20 per cent; lowest, 5 per cent; average, 15 per cent.

No data available as to amount of gold and silver coin withdrawn from monetary use during the year ended December 31, 1918.

The quantity of gold and silver used in the industrial arts during the calendar year 1918 is unknown.

The production of gold from deep mines during the year 1918 was 1,244 kilograms (39,995 ounces), valued at 935,245 sucres (\$455,184).

The premium on gold for 1918 was: Highest, 243 per cent; lowest, 211 per cent; average, 227 per cent.

The premium on gold for 1917 was: Highest, 150 per cent; lowest, 148 per cent; average, 149 per cent.

The actual currency of the country is the sucre, valued at 50 cents United States money.

There was exported to the United States, during the year ended December 31, 1917, gold bullion amounting to 1,824,222 sucres (\$887,849) and gold ores amounting to 908,609 sucres (\$442,220).

THE FOREIGN EXCHANGE SITUATION IN 1917.

[Consul General Frederic W. Goding, Guayaquil, in Supplement to Commerce Reports, Nov. 18, 1918.]

An effort was attempted by executive decree to reduce the rate of foreign exchange during the year, as drafts which normally sold at 2.075 had reached a point where difficulty was experienced in purchasing them at 2.70 and even more, the official rate being placed at 2.43, with a penalty for deviating from that figure. Very little effect, however, was observed on the sales of exchange, which increased to 2.60 and more at times, the law of supply and demand governing the rate as usual. It is the general opinion of merchants that the rate of exchange will remain as it is or even go higher, until a decided change occurs in the financial conditions of the country.

There is no national money in Ecuador, the circulation medium being issued wholly by the banks, under Government direction and restriction. The conditions of four banks of issue appear in the following statement of their assets compiled from official figures: Bank of Azuay, \$706,793; Commercial and Agricultural Bank, \$14,580,462; Bank of Ecuador, \$5,218,842; and Bank of Pichincha, \$3,386,627.

At the close of the year there were in circulation in Ecuador bank bills of a value of \$6,064,863; gold coin, \$2,625,522; and silver coin, \$1,574,408; making a total of \$10,264,793. It is interesting to compare this total with those of previous years which were as follows: In 1907, \$7,380,324; in 1911, \$8,346,761; in 1914, \$9,803,325; and in 1916, \$9,727,411.

¹ There is, in fact very little gold in Paraguay. The gold on hand as shown in the above figures represents gold credits in the banks of Buenos Aires or Argentine paper currency on hand. The item of \$500,000 gold in circulation is an estimate, probably an overestimate.

² Rate of conversion, Argentine gold peso, \$0.9648.

PREMIUM ON GOLD.

Highest, \$35.31; lowest, \$18.17; average, \$27.60.

Paraguayan paper fluctuated from \$35.31 paper to \$1 gold to \$18.17 paper to \$1 gold (Argentine).

Paraguayan paper currency appreciated in value to a marked degree during the year ended December 31, 1918, the highest rate of exchange reached being \$18.17 Paraguayan paper for \$1 Argentine gold. The oficina de cambios, the Government conversion office, made an attempt to stabilize gold at the rate of \$25 Paraguayan paper to \$1 Argentine gold; but as the Government controlled but a small percentage of the paper currency it was unable to maintain the circulating medium of the country at that rate of exchange without the aid of a new emission. This Congress failed to do, and the President of the Republic held firm to his proposal as enunciated in his message to Congress delivered on April 1, 1918, in which he favored the plan to stabilize Paraguayan currency at the rate of \$15 Paraguayan paper to \$1 Argentine gold. It is his opinion that the continuous influx of gold, in the form of Argentine paper currency, and the improved credit of the country, due to annual payments on the foreign debt, will eventually enable the country to establish a fixed rate of conversion. This he proposes to accomplish by retiring a certain percentage of the paper currency put into circulation at the rate of \$30 Paraguayan paper to \$1 Argentine gold by substituting for the same a new emission at the rate of \$15 Paraguayan paper for \$1 Argentine gold. He believes that the improved credit of the country will enable the minister of finance to float a foreign loan which can be used as a fixed gold reserve fund for the redemption of the paper currency of the country.

There were no actual imports of gold of any appreciable amount either in the form of coin, bullion, or ore during the year ended December 31, 1918. There was a considerable influx of Argentine paper, however, due to the purchase of cattle and supplies bought locally, as well as the payment of salaries and wages to the employees of the three new American beef-packing industries which began to operate in the country during the year.

ATTEMPTS TO STABILIZE EXCHANGE.

[Consul Henry H. Balch, Asuncion, in Supplement to Commerce Reports, Dec. 24, 1918.]

The rates of exchange between Argentine gold and Paraguayan currency at specified times in 1917 were as follows, the figures representing the number of Paraguayan paper pesos required to buy 1 Argentine gold peso: 38.4 on March 2, 3, 4, and 19, the maximum for the year; 31.22 on January 3, the minimum for the year; 33.98, the average for the year; 35 on December 31. Not long after the close of the year the rate declined to 25 Paraguayan pesos for 1 peso, Argentine gold.

The Government conversion office (oficina de cambios) was established in the early part of 1916 to give the Government a means of controlling the rate of Paraguayan paper money. At the close of 1917 the conversion office had 13,694,240 Paraguayan pesos and 2,000 Argentine gold pesos for use in stabilizing the commercial exchange of the Paraguayan money through either the sale or the purchase of Paraguayan money, as circumstances require, at arbitrary rates fixed by the conversion office for that purpose. In spite of all efforts to fix the commercial rate of exchange, the paper currency continued to show great fluctuations during the year, which caused

serious losses and proved a handicap to all transactions in gold, since the circulating medium of the country is the paper currency. All local expenses, wages of Paraguayan laborers, etc., must be paid in Paraguayan money, regardless of the rate of exchange.

PERU.

PERUVIAN CURRENCY.

[From the Economist, London, July 27, 1918.]

Notwithstanding the efforts promoted by the Junta de Vigilancia which, since the early troubles of 1914 through which Peruvian finances have passed, has had charge of the administration of the various war currency issues, the monetary position remains unsatisfactory. Up till 1914 the currency of the Republic had long remained stable, the libra, or Peruvian pound, being equal in value to the pound sterling or, say, \$4.8665. There was no paper money in circulation, gold and silver alone being used, and exchange was not subject to any violent fluctuation. With the embargo placed by the United States upon the export of gold, the troubles of the Republic commenced. The direct and indirect effects upon the two great industries of the country—mining and agriculture—have naturally been serious. Other commercial interests have also suffered. The larger corporations and firms have felt the consequences much more than smaller individuals, who may have required but modest amounts of specie to meet their engagements in the form of wages and other current expenses. Companies like the Cerro de Pasco, who require £75,000 (=U. S. \$365,000) monthly in currency to pay their workmen, are suffering so much inconvenience that it seems not unlikely, in the absence of some practical relief, that they must temporarily close down. The representative of the company in Lima, Mr. Daniel C. Rabbit, has acknowledged the situation to be thus serious. It would seem that the banks have little or no elasticity in the way of dealing with drafts for the payment of importations, and it is not possible to sell paper on New York for amounts of more than \$5,000, and only then at a discount of \$18 per cent. No rate of exchange for larger sums is quoted. Against the normal exchange of the United States greenback backed by gold of 2 soles for \$1, the rate is now about 1.80 soles, or less. Some few months ago the United States Government offered to transfer the sum of £P. 4,000,000 (=U. S. \$19,466,000), which stood to the credit of Peru on her export trade, to deposit at the Federal Reserve Bank of New York against the issue of certificates for an equivalent amount, providing that this gold would be restored to the Peruvian Government at the end of three months after the termination of the war. The suggestion has not found approval everywhere, but the principal banks seem to view it with favor, and both legislative houses have supported it. There is a very pronounced feeling among the native population against the issue of paper money, since the memory of the disaster of 1880, following upon the war on the Pacific, is still fresh. Up till lately, the only money seen in Peru has been paper in the form of Peruvian pound notes (=10 soles), half-pound notes (=5 soles), and bills of 50 and 5 centavos. These notes or bills represent a sum of about £P. 3,000,000 (=U. S. \$14,599,500), and are guaranteed by gold, or, to be exact, £P. 500,000 (=U. S. \$2,433,250) of the notes of smaller denominations are secured by an equal amount of gold, and £P. 2,500,000 (=U. S. \$12,166,250) are backed by 60 per cent of their value in actual gold and 40 per cent in bonds and other gold-bearing securities. Considering the population of Peru exceeds 4,500,000, this is not deemed a sufficiently large circulating medium. Postage stamps have been doing duty in every-day transactions, but the situation has been sensibly relieved since the arrival of the new nickel currency of 5, 10, and 20 centavo pieces from the United States, where they were coined. New paper notes of 1 sol are also now put into circulation, both being designed as a substitute currency to prevent the hoarding or exportation of the gold and silver coinage in the country.

PAPER CURRENCY NEED.

[Commercial Attaché William F. Montavon, Lima, in Commerce Reports, Feb. 20, 1918.]

Peru is suffering from the lack of anything like a national bank. If there were in Peru to-day a bank that possessed the confidence of both the Government and the business public, through which this issue of paper currency could be realized, I have no doubt but that some satisfactory arrangement for the issue could be arrived at.

[Vice Consul Lynn W. Franklin, Callao-Lima, Peru, Jan. 23.]

In its issue for January 12 the West Coast Leader thus discusses the exchange situation in Peru:

"The embargo on gold exports from the United States to Peru and other neutral countries, and the failure of the Peruvian Congress to take action on the proposed law authorizing the issuance of £P. 4,000,000 in gold certificates, guaranteed in full by gold deposited in the United States Federal Reserve Bank, New York, have resulted in soaring rates of exchange on New York, London, and other foreign markets. On January 10 the Bolsa Comercial quoted 90-day drafts on London, selling at 13½ per cent discount, sight drafts selling at 12 per cent discount; 90-day drafts on New York selling at \$5.39 to the Peruvian pound, and sight drafts on New York at \$5.35 to the pound. On the same date the Banco Mercantil was selling sight drafts on London at 12 per cent; 90-day drafts at 14 per cent; selling sight drafts on New York at \$5.35 and 90 days on New York at \$5.40 to the Peruvian pound. The same bank was buying sight New York at \$5.42½; 90 days New York at \$5.50; sight drafts on London at 13½ per cent discount and 90 days London at 15 per cent discount. With New York and London drafts steadily accumulating in the local market, owing to the enormous surplus of exports over imports, and with no gold coming in to equalize the situation, it is difficult to prophesy where exchange will go unless the necessary legislation is passed to meet the situation."

PERUVIAN LAW OF SEPTEMBER 16, 1918, CONCERNING THE ISSUE OF GOLD CERTIFICATES OF THE REPUBLIC.

ARTICLE I. The banks of the capital of the Republic are hereby authorized to increase the issue of circular checks to the amount of 3,000,000 Peruvian pounds on the general guaranty of their own assets and on the following special guaranties:

- (1) Of gold coin;
- (2) Of gold bars 7.323 grams fine per Peruvian pound;
- (3) Of certificates of the mint in exchange for gold to be coined, such certificates to be accepted at face value; and

(4) Of the funds in gold dollars deposited in current account in the Federal Reserve Bank of New York, which by agreement entered into between the Peruvian and United States Governments, will be returned by said bank for importation into Peru in gold bars at the rate of 23.22 grams of fine gold for every dollar on deposit.

ART. II. The gold and the mint certificates, in part constituting the guaranty, shall be deposited in Lima, in care of the Junta de Vigilancia and of the issuing banks, as provided by article 6 of Law No. 1968.

The deposits in the Federal reserve bank shall be made to the order of the Junta de Vigilancia and of the depositing bank, and the junta shall accept them as parts of the guaranty.

ART. VI. Provides that the banks issuing these circular checks shall buy 90-day drafts on London at a discount of 9 per cent, which rate shall be the basis for all other foreign exchange rates, and which shall remain effective until the issuing banks have acquired drafts in London and New York equivalent to 3,000,000 of Peruvian pounds.

ART. IX. Provides for transfer, three months after the signing of peace between the United States, France, England, and Germany, from the United States to Peru, of the balance of gold then held by the Federal reserve bank for Peru, and coinage of same into Peruvian pounds for the conversion of the circular checks.

GOLD IMPORTS AND SILVER EXPORTS.

Total.....	2,971,743	1,985,371	2,053,271

STATUS OF THE BANKS.

[From Bulletin of the Pan American Union, April, 1919.]

The National Banking Inspection reported the following statistics concerning the status of the banks: Gold in the banks, December 31, 1918, 49,404,033 pesos (\$51,093,651); gold on the same date of 1917, 46,103,389 pesos (\$47,680,125).

RECOINAGE EXECUTED.

According to the Bulletin of the Pan American Union, May, 1919, only 2,771,293 pesos of the 5,000,000 pesos recoinage authorized by law of January 3, 1916, and being executed by the Argentine mint, had been delivered up to December 31, 1917.

BANK OF THE REPUBLIC—INCREASED CIRCULATION AND RESERVES.

[Consul William Dawson, Montevideo, in Supplement to Commerce Reports, Dec. 10, 1918.]

The Bank of the Republic, which has the sole right of issuing notes in Uruguay, plays an important part in all phases of Uruguayan finance.

During 1917 the maximum authorized emission of gold notes (10 pesos=\$10.34 or over) was increased by a law of November 27, 1917, from twice to three times the paid-up capital, subject, however, to the maintenance of a gold reserve of not less than 40 per cent of gold notes in circulation plus other sight obligations. The new maximum emission authorized in 1917 is that in force before the war, which was reduced to 26,000,000 pesos (\$26,884,000) in 1914 and fixed at twice the paid-up capital in 1916. The same law of November 27, 1917, confirmed the suspension of specie payments until three months after the close of the war and authorized a special note issue of 5,000,000 pesos (\$5,170,000) to private banks against gold deposits, rediscounted paper, etc. (For further information as to the law of Nov. 27, 1917, to increase circulation, see Commerce Reports for Jan. 29, 1918.)

The following figures show notes in circulation and reserves of the Bank of the Republic on December 31 of the years named. "Mayor" notes are those of 10 pesos (\$10.34) or over which are ordinarily redeemable at sight in gold; "menor" notes are those under 10 pesos, payable in silver or gold.

Notes and reserves.	1916	1917	Notes and reserves.	1916	1917
NOTES IN CIRCULATION.			RESERVES.		
Mayor.....	\$30,951,156.28	\$36,928,120.90	Gold.....	\$33,244,579.01	\$41,995,216.69
Menor.....	6,857,141.09	7,125,202.49	Silver.....	1,963,208.03	2,486,755.01
			Nickel.....	25,368.52	23,113.19
Total.....	37,808,297.37	44,053,323.39	Total.....	35,233,155.56	44,505,084.89

It will be observed that while circulation increased by \$6,245,000 during 1917 this was more than offset by an increase of \$9,272,000 in reserves. It is interesting to note that on December 31, 1914, notes in circulation amounted to \$26,995,250 against metallic reserves of \$14,334,364.

INCREASED ISSUE OF NOTES AUTHORIZED IN URUGUAY.

[Consul William Dawson, Montevideo, Nov. 30, in Commerce Reports, Jan. 20, 1918.]

A law of November 27, 1917, contains certain provisions modifying the Uruguayan monetary system. The text of the law is substantially as follows:

ARTICLE 1. The Bank of the Republic shall enjoy the exclusive privilege of issuing notes, subject to the following conditions: Up to 50 per cent of its paid-up capital (capital realizado) in notes under 10 pesos (peso=\$1.0342 U. S. gold) convertible at its election into silver or gold coin; up to three times the said capital in notes of 10 pesos or over payable in gold to the bearer and at sight, the bank being obliged to maintain at all times a gold reserve equal to not less than 40 per cent of its major issue in circulation (i. e., notes of 10 pesos or over) and its other immediately exigible obligations.

Prior to the passage of the present law and by an act of January 14, 1916, the issue of notes of 10 pesos or over was limited to twice the paid-up capital of the bank. The act of November 27, 1917, restores the maximum regular emission to the proportion authorized under the charter in force when the war broke out.)

ART. 2. The authorization given to the bank to suspend the conversion of its notes until three months after the close of the European war remains in force.

ISSUE OF NOTES TO PRIVATE BANKS.

ART. 3. The bank is authorized to issue, in addition to the emission authorized by article 1, up to the sum of 5,000,000 pesos in notes to be delivered to private banks at their request, subject to the following conditions: The banks will deposit in the Bank of the Republic in gold coin at least 50 per cent of the value of the notes received. This gold will be held in custody and can not be assigned to any other use. For these notes having a gold guaranty the banks will pay interest at the rate of $\frac{1}{2}$ per cent per annum on account of cost of issue. The remainder of the operation will be covered by discounted papers (valores de cartera) satisfactory to the directorate, the same to be rediscounted at a rate from two to three units below the average discount rate of the Bank of the Republic. The latter reserves the right to accept a bank bond or note (bono o vale bancario) as a guaranty in lieu of the paper mentioned. No guaranty in the form of a bank bond or note will be accepted for a greater amount than 400,000 pesos for each bank. The bond or note will constitute a privileged credit against the bank issuing and subscribing it and will be assigned to the particular transaction and no other. The amount of gold received in custody can not exceed 2,500,000 pesos. The transactions referred to in this article must be canceled at or before expiration of the period of loan and can not be renewed.

DEPRECIATION IN EXCHANGE.

[Consul William Dawson, Montevideo, in Supplement to Commerce Reports, Dec. 10, 1918.]

As a rule, there is a drop in exchange at Montevideo in the fall of the year when the active shipping season for wool and hides commences. The depreciation in the value of foreign currencies in 1917, however, far exceeds the normal fluctuation of exchange. The trust or cash selling rate agreed upon by all Montevideo banks for sight drafts on New York in amounts from \$1,001 to \$3,000 was 94.90 on October 1, 1917, and 83 on December 13. The lowest figure quoted in 1916 had been 92.70. The depreciation in British, French, and Italian exchange was equally as or even more serious.

VENEZUELA.

NEW COINAGE AUTHORIZED.

[From Bulletin of the Pan American Union, September, 1918.]

Congress has authorized the coinage of 5,000,000 bolivares (\$965,000) in silver, and 10,600,000 bolivares (\$2,045,800) in gold.

PRODUCTION OF GOLD IN 1918 AND 1917.

[Consul Homer Brett, La Guaira, in Commerce Reports, Aug. 27, 1919.]

In 1918 twelve companies were engaged in mining gold, one company producing fully one-third of the total of 712,007 grams (22,891 ounces). The gold output in 1917 was 958,304 grams (30,809 ounces).

FINANCIAL SITUATION OF BANKS OF ISSUE ON DEC. 31, 1917.

THE CURRENCY SYSTEM OF VENEZUELA.

[Consul Frank Anderson Henry, Puerto Cabello, Mar. 4, in Commerce Reports, Mar. 30, 1918.]

Venezuela possesses a stable currency based on gold. The monetary unit is the bolivar, which is the exact equivalent of the French franc or of \$0.193 United States currency. The Venezuelan coinage consists of gold, silver, and nickel, the principal pieces in circulation being 20 bolivares gold, 5, 2½, 2, 1, 0.50, 0.25 silver, and 0.125 and 0.05 nickel.

Formerly a nominal unit, the "peso," equal to 4 bolivares, was much used in commercial transactions, but the exclusive use of the bolivar is now compulsory. The employment of the peso in conversation still survives, especially among the country people, as does also that of the following old Spanish terms: Real (0.50 bolivar), medio (0.25 bolivar), cuartillo (0.125 bolivar), centavo (0.05 bolivar).

All foreign gold coin is legal tender at rates fixed by law, which are for the principal foreign currencies: Franc (French) equals 1 bolivar; peseta (Spanish) equals 1 bolivar; dollar (American) equals 5.20 bolivares; pound sterling (British) equals 25.25 bolivares; mark (German) equals 1.25 bolivares. Gold coin is much in demand, especially in the large cattle-raising region known as the llanos. Much of it is hoarded when it reaches there and is thus withdrawn from circulation. Largely on account of this demand gold coin commands a premium ranging up to 2 per cent.

COUNTERFEIT COINS OF MORE THAN FACE VALUE.

[From the Numismatist, September, 1918.]

A shipper of platinum from Venezuela recently sent to this country several counterfeit coins which were unusual in that, although counterfeit, they were worth about five times their face bullion value. They were included in a shipment of crude plain

platinum, and the consignee, believing that they were gold, as they seemed, carefully removed them from the lot of platinum and sold them to a gold refiner as gold bullion.

Later advices from South America informed him that the coins were platinum, plated with gold, and requested that he have them assayed to determine their real value. The agent hastened to the refiner, who admitted that he had had a hard time melting the metal and had himself discovered that it was platinum. Some settlement was made satisfactory to both the refiner and the agent, but the coins were destroyed and no analysis was ever made to determine the exact value of the metal.

In another shipment of grain platinum, received at a later date, the same shipper included a single counterfeit piece. The agent took this to a laboratory for analysis, but intrinsically the single piece was hardly worth the cost of the analysis from the purely commercial viewpoint; besides, the coin being an excellent piece of work in a fine state of preservation, it seemed a pity to destroy it. The gold plating is somewhat worn, disclosing the white metal beneath in spots. It is a counterfeit of an old Spanish piece bearing the date 1789, and the head of Charles IV. It weighs 6.435 grams and has a specific gravity of 18.9. This, of course, shows that if it is not gold, it must be platinum, or at least an alloy consisting principally of platinum. The color of the metal after removing the gold plating, and its hardness, are sufficient additional proof of its character.

It seems that these old Spanish pieces pass current in Venezuela, at least for their bullion gold value, says a contributor to the *Scientific American*. Some unprincipled person in the long ago must have discovered that the native platinum, found to some extent in Venezuela and more plentifully in the neighboring Republic of Colombia, would if melted make a fair substitute for gold in coins, provided the color were properly disguised by a thin gold plating. Whether these counterfeits were made at or near the date they bear or at some much later period is unknown. They are probably a comparatively recent product, but they must have been made some time before our South American friends were able to market platinum at a price above that of gold, and that is long ago. Whenever they were made, we now have the curious condition of a counterfeit gold coin intrinsically worth several times its face value.

EXCHANGE RATES.

[Consul Homer Brett, La Guaira, Jan. 31, 1918, in Commerce Reports, Feb. 15, 1918.]

The banks' buying rate for dollars in sight drafts on New York is now at 4.80 bolivars (at par \$1 equals 5.18262 bolivars), which is the lowest point ever reached, and expectations are that it will go still lower, as Venezuela is exporting large quantities of merchandise to the United States, and, because of export restrictions now in force in the United States, can import only small quantities of merchandise and no gold.

EUROPE.

AUSTRIA-HUNGARY.

COMPARATIVE STATEMENT OF THE AUSTRO-HUNGARIAN BANK, 1914-1918.

[Vienna correspondence of the Berlin Boersen-Zeitung, Jan. 29, 1919, in Commerce Reports, Apr. 17, 1919.]

The following table shows the development of the stock of precious metals and the note circulation since the beginning of the war:

Items.	1914	1915	1916	1917	1918
	<i>Kronen.</i>	<i>Kronen.</i>	<i>Kronen.</i>	<i>Kronen.</i>	<i>Kronen.</i>
Stock of precious metals..	1,195,000,000	811,000,000	354,000,000	381,000,000	343,000,000
Notes in circulation.....	5,137,000,000	7,162,000,000	10,889,000,000	18,430,000,000	35,588,000,000
Short-term scrip notes (Kassenscheine).....					7,418,000,000

In order to avoid a further increase in the circulation the bank had recourse to short-term scrip notes (Kassenscheine) and succeeded in issuing 7,418,000,000 of kronen of such notes within a few months.

The metallic cover of the notes is almost null. It amounts to 343,000,000 kronen, being 39,000,000 kronen less than a year ago, and represents less than 1 per cent of the total of notes and short-term scrip notes (Kassenscheine). The reserve includes

262,000,000 kronen in gold bullion and coin, 24,000,000 kronen of bills and foreign drafts, and 57,000,000 kronen of silver coins. At the beginning of the war the bank held 1,231,000,000 kronen of gold, as against a circulation of 2,129,000,000 kronen. Now the bank holds hardly any gold, while the circulation is 17 times larger.

NOTE.—One krone at par=United States \$0.2026.

AUSTRO-HUNGARIAN BANK.

A résumé of the bank's war activities is published in Commerce Reports of February 2, 1918, from which is taken the following comparative statement:

Assets and liabilities.	July 23, 1914.	Dec. 7, 1917.	Assets and liabilities.	July 23, 1914.	Dec. 7, 1917.

			Other liabilities.....	82,050,000	871,893,000

EXISTENCE OF THE AUSTRO-HUNGARIAN BANK LIMITED.

Commerce Report for May 15, 1919, contains a sketch of the historical development of the monetary system of the dual monarchy. The same article contains the following statement:

"The States which divided the territory of the former monarchy have agreed to continue the Austro-Hungarian Bank in existence until December 31, 1919, but only for the purpose of liquidation."

CONFUSED MONETARY SITUATION.

With the break-up of the Austro-Hungarian Empire, there arose an exceedingly confused monetary situation, as published in Commerce Reports August 30, 1919.

With each of the new nations of Middle Europe and with the neighboring countries, the problem of a monetary unit varied according to its economic resiliency. Some were faced with the problem of continuing the use of the crown, so marked as to distinguish it from the crown as used elsewhere. Some had the still more difficult problem of consolidating and stabilizing the crown and some other, perhaps more than one other, unit until a new national unit could be evolved.

Italy struggled with the lira and the crown as used in the Trentino and Venezia Giulia. The new Yugoslavia found the crown a fixture in Croatia, Slovenia, and other parts of the old monarchy, while Serbia used the dinar. Czechoslovakia had the crown as its only unit. Poland wrestled with the Russian ruble, the German mark, and the crown. Hungary and German Austria endeavored to keep up the value of the crown in its original home. In Roumania the Russian ruble was used in Bessarabia and the crowns in Transylvania, the Banat, and Bukovina, while, in the old kingdom itself, there was the "made in Germany" requisition paper, which somehow must be reconciled and adjusted to the genuine Roumanian money.

The different peoples adopted different methods, in some cases neighboring States imposing such radically opposite regulations that hopeless confusion resulted. A traveler from the borders of Poland to Bucharest in the summer of 1919 was compelled to have with him for instant use nine different kinds of currency, all paper and all far from clean—Polish, Czech, Austrian, Italian, Jugo-Slav, Hungarian, two kinds of Roumanian, and French. There was a great loss by exchange, with the rate varying from day to day, as the different Governments fluctuated in their political stability or the great powers made or refused to make loans. No currency was good outside of claimed limits except at a discount.

The Austrian, the Czech, and the Jugo-Slav Governments stamped their paper money—the Austrians with a red band reading “Deutschoesterreich,” the Czechs with a sort of postage stamp, and the finance ministry at Belgrade with a purple circle and some lettering indicating authenticity. The Pole in Galicia and the Hungarian during the interval between the armistice and the signing of the peace treaty continued to use the old unstamped Austro-Hungarian crowns. Roumania stamped its “made in Germany” bills and accepted them pending their retirement by the money printed by the Roumanians themselves.

DISTRIBUTION OF AUSTRO-HUNGARIAN BANK NOTES.

[From the Economist, London, Mar. 15, 1919, p. 436.]

The amount of Austro-Hungarian crowns in circulation is estimated as follows: Twelve milliards in the Czech countries, 7 milliards in Hungary, 2 milliards in Transylvania, 8 milliards in German-Austria, $4\frac{1}{2}$ milliards in Jugo-Slavia, 1 milliard in Austrian Poland, 1 milliard in Russian Poland and the Ukraine, $\frac{1}{2}$ milliard in the Trentino and Istria, and $2\frac{1}{2}$ milliards in Germany, Switzerland, Holland, and other foreign markets.

NOTE.—One milliard equals 1,000 million.

BELGIUM.

NEW ZINC COINS FOR OCCUPIED BELGIUM.

[From the Numismatist, August, 1918.]

In order to make up for the shortage of small change that interferes with the simplest business transactions in occupied Belgium, it has been decided to proceed at once to the striking of zinc 50-centime coins.

RESTITUTION OF BELGIAN GOLD.

[From L'Economiste Européen, Dec. 27, 1918.]

On the 20th of December there arrived at Brussels, with the train coming from Cologne, a car containing the sum of 380,000,000 marks, accompanied by German delegates, who consigned it to the representative of the Allies. The funds were taken to the national bank.

FINANCIAL SITUATION.

[From the Bankers Magazine, New York, April, 1919.]

On December 31, 1913, the paper currency of Belgium aggregated 1,067,000,000 francs, or \$206,000,000—valuing the American dollar as 5.18 francs. Five months after the declaration of war against Germany, that is, on December 1, 1914, the paper currency totaled 1,614,000,000 francs, or \$312,000,000. On November 11, when the armistice was signed, Belgian paper currency amounted to 2,600,000,000 francs, or \$502,000,000. On February 4 last this currency aggregated 4,000,000,000 francs, or \$772,000,000.

These notes are secured, first, by gold currency and bullion to the value of 300,000,000 francs, or \$57,900,000; and, second, by German bank notes (Reichbank) aggregating 5,000,000,000 marks, or \$1,217,000,000.

While the ratio between the gold reserve and the total amount of notes in circulation is only 7.5 per cent, if, in conjunction with the gold reserve, the notes of the Reichbank are taken into account, the ratio is much above 100 per cent.

The amount of marks (5,000,000,000) originated as follows:

The subscription to three-year 5 per cent treasury notes, in francs, issued since the armistice, 75 per cent of which the buyer had the option to pay in marks, and the exchange of mark currency against Belgian bank notes have brought into the coffers of the Banque Nationale de Belgique 3,400,000,000 marks, or \$820,000,000. In addition, Germany has already been obliged to reimburse Belgium for the sums of money which it confiscated from Belgian banks and private firms. This reimbursement has amounted to 1,600,000,000 marks, or \$386,000,000.

The national bank has credited all marks so received on the basis of 1.25 francs per 1 mark. Therefore, the national bank has now a credit against Germany amounting to 5,000,000,000 marks. This credit is guaranteed to the national bank by the Belgian Government, which has, in turn, the pledge of the German Government to redeem the marks on the same basis of 1.25 francs for 1 mark.

NOTE ISSUE OF THE SOCIÉTÉ GÉNÉRALE DE BELGIQUE.

[From the Federal Reserve Bulletin, Washington, May 1, 1919.]

As a result of seizure between August 10 and September 2, 1914, by the German invading force of a total of 8,515,000 francs at branches of the National Bank of Belgium, its metallic reserve of about 300,000,000 francs, its securities, supply of notes, and plates were sent for safekeeping to Antwerp and thence to the Bank of England. The National Bank of Belgium was thus no longer able to supply the country with currency, but issued 200,000,000 francs of emergency notes, which were soon exhausted.

In order to avoid introduction into Belgium of currency under German control it was agreed that the Société Générale de Belgique should assume the functions of a bank of issue during the German occupation.

The société générale was obliged to discount and issue notes against short-term obligations ("bons") of the Belgian provincial authorities exacted from them in payment of the war contributions imposed by the German military authorities, who threatened in case of refusal to invest the debt obligations of the provincial governments with legal-tender quality.

As nearly as can be estimated, the contributions imposed on the nation as a whole were as follows:

Contributions.	Date.	Amounts.
		<i>Francs.</i>
First.....	Dec. 10, 1914	480,000,000
Second.....	Nov. 10, 1915	480,000,000
Third.....	Nov. 20, 1916	300,000,000
Fourth.....	May 21, 1917	360,000,000
Fifth.....	Nov. 20, 1917	360,000,000
Sixth.....	May 24, 1918	360,000,000
Total for period of occupation.....		2,340,000,000

During the first two years payments were demanded at the rate of 40,000,000 francs per month; during the following six months at the rate of 50,000,000, and during the last two years at the rate of 60,000,000. These amounts, together with the approximately 200,000,000 francs of local contributions, bring the total amount of war contributions to 2,540,000,000 francs.

FORCIBLE REMOVAL OF BANKS' RESERVES.

Germany demanded that the German marks in Brussels be removed to the Reichsbank, in Berlin, evidently to increase the Reichsbank's reserve against its note circulation. They did remove to Berlin, September 1916, 430,000,000 marks, which, together with subsequent removals, give a total amount of 600 million marks, credited to the banks as 750 million francs at the enforced rate of exchange of 1.25 francs per mark.

Since the signing of the armistice these amounts are reported restored to the Belgian banks.

During the occupation the Belgian banks had made efforts to maintain the Belgian note circulation at as low a level as possible and to keep the German marks in actual circulation, in order to avoid their accumulation in the banks, whence they were likely to be taken to Berlin. After the armistice was signed the policy of the banks was reversed, and efforts were made to retire German marks from circulation in Belgium. The amount involved was very large, owing to the fact that the Germans had paid for what they requisitioned in Belgium in German marks, and had required payments to them to be made largely in Belgian francs. In order to get control of the marks the banks agreed to accept 75 per cent of the subscriptions to the postwar Government loan in marks. As a result of this and the return of the German notes by the German Government, the société générale and the national bank have a claim on the German Government in the form of notes estimated at between 5,000,000,000 and 7,500,000,000 marks, guaranteed to the banks by the Belgian Government, which in turn has the pledge of the German Government to redeem these marks at 1.25 francs per mark.

Immediately after Germany's withdrawal from Belgium the société générale restored the department of issue to the national bank and consummated the original plan of administering the note issue function merely as a trust for the central national

bank, which was thus able to resume its normal functions as soon as the country regained its independence.

NOTE.—During the period of occupation the société générale issued about 1,500,000,000 francs of notes. The notes in circulation on different dates were as follows:

	Francs.
Nov. 18, 1915.....	543, 216, 000
Dec. 28, 1916.....	849, 968, 000
Dec. 20, 1917.....	1, 118, 649, 000
Sept. 26, 1918.....	1, 452, 947, 000

The total circulation of Belgian bank notes, including the outstanding notes of the national bank, amounted, therefore, at the close of German occupation to about 3,000,000,000 francs, covered by a metallic reserve of about 300,000,000 francs of gold and silver held in the Bank of England and repatriated since.

BULGARIA.

PRICE OF SERBIAN COINS AND PAPER MONEY FIXED.

[From the Numismatist, February, 1918.]

A press dispatch to the Paris Temps from Salonica says: "According to information given by the official Bulgarian finance department, Bulgarians will accept Serbian silver money at 65 per cent and nickel at 50 per cent. The Austrians are giving only 50 centimes for a dinar (in normal times a dinar is equal to a franc).

"Bulgarian financiers fear that Bulgaria will be flooded with Serbian silver. The finance minister has decided not to accept Serbian paper money, because, it is declared, the Serbian National Bank quit the country with a stock of 61,000,000 dinars, leaving 380,000,000 of dinars in paper money among the population."

FOREIGN PAPER MONEY IN BULGARIA.

[From the Numismatist, March, 1918.]

Consul General Murphy, at Sofia, reports that German and Austro-Hungarian bank notes are no longer to be favored with an obligatory rate of exchange, and their importation to Bulgaria is now forbidden. Travelers coming from Germany and Austria-Hungary are not permitted to bring in more than 2,000 marks or crowns. Bank notes representing a greater amount than that must be deposited at customhouses on the frontier. The use of foreign bank notes, including those of Germany and Austria-Hungary, in payment of taxes is also prohibited.

CYPRUS ISLAND.

The amount of gold coin withdrawn from monetary use during the year ended December 31, 1918, was estimated at £600 (\$2,920).

The amount of gold used for industrial purposes during the year ended December 31, 1918, was approximately £600 (\$2,920).

Approximate stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1918.

CZECHO-SLOVAKIA—BOHEMIA.

[Commerce Reports, Jan. 28, 1919.]

THE CURRENCY SYSTEM.

The bill relating to legal-tender currency was passed by the national assembly on November 19, 1918. The law authorizes the State Bank of Bohemia to issue notes, which may be paid out by the State Bank or delegated institutions in exchange for notes of the Austro-Hungarian Bank. The State Bank is to accumulate a reserve consisting of notes of the Austro-Hungarian Bank and minor coins of the crown monetary system in which the notes of the State Bank are to be redeemed. For this purpose the Government will make a deposit of 25,000,000 crowns. The State Bank may issue notes to an amount not exceeding four times the available reserve. The profit accruing from the issue of notes is to be divided between the bank and the State in a definite proportion. Like the notes of the Austro-Hungarian Bank, the notes of the State Bank are to be legal-tender money in the Republic of Bohemia and shall be accepted by all public treasuries to any amount.

It is estimated that notes of the Austro-Hungarian Bank to an amount of 32,000,000,000 crowns are in circulation in the territory of the former Austro-Hungarian Monarchy. The amount in circulation within the limits of the Republic of Bohemia is estimated at 10,000,000,000 crowns. It has been decided to retain the crown currency system until the obligations of the Austro-Hungarian Bank have been liquidated. A system of gold standard currency is to be established thereafter, the unit proposed being the "sokol," equivalent to a franc. A gold reserve is now being accumulated and gold is being collected all over the country.

DENMARK.

Coinage executed from Apr. 1, 1917, to Mar. 31, 1918.

Denomination.	Pieces.	Value.	
Gold, 10 kroner.....		Kroner.	U. S. dollars.

Total	¹ 61,017,540	16,352,701

¹ No figures given for silver and paper currency.

LAWS AFFECTING THE CURRENCY.

A royal decree of March 31, 1918, prohibited the melting, transforming, buying, selling, or making over to others, of Danish, Norwegian, and Swedish coin.

The gold imports from Germany during the year ended December 31, 1918, amounted to 28,760,000 Reichsmarks, at 0.8880, 25,538,880 kroner (\$6,844,420).

The gold exports during the year were 20,000,000 Reichsmarks, at 0.8880, 17,760,000 kroner, to Sweden; 8,000,000 Reichsmarks, at 0.8880, 7,104,000 kroner, to Norway. Total exports, 24,864,000 kroner (\$6,663,552).

GOLD RESERVE AND NOTE CIRCULATION IN DECEMBER, 1918.

[Consul Baylor L. Agerton, Copenhagen, in Supplement to Commerce Reports, July 31, 1919.]

The total stock of gold in Danish banks in December last was \$51,992,000, which was an increase of about \$1,875,000 over that of the corresponding month of the previous year. The present gold reserve is about two and one-half times as great as in the period immediately before the war. The paper money in circulation in December, 1918, was about \$120,600,000; this shows an increase over the record of 1917 and is about three times as great as the note circulation before the war.

FINLAND.

BANK OF FINLAND'S REPORT FOR 1917.

[Svensk Handelstidning; transmitted by Commercial Attaché Erwin W. Thompson, Copenhagen, Denmark, Aug. 5, in Commerce Reports, Sept. 6, 1918.]

The report of the Bank of Finland for 1917 shows clearly the effects of the Russian revolution. The most astonishing thing about the balance is the decrease of the capital stock from 25,000,000 to 4,700,000 Finnish marks (Finnish mark=\$0.193), and the total disappearance of the reserve fund of 62,000,000 marks. Thus about 82,000,000 marks has been used to cover losses. The cause was the unprecedented fall in Russian exchange, whereby the outstanding accounts in Russia were decreased in value by no less than 158,938,909 marks. The exceptional profit made by the bank on other foreign transactions has reduced this loss to 90,893,054 marks. The Finnish Government has now voted 350,000,000 marks for strengthening the balance of the bank, whereby its position is again secured.

The paper currency of the bank on January 1, 1917, was 416,300,000 marks, compared with 766,700,000 marks in 1918, which is an increase of 86 per cent in one year. At the same time the amounts on deposit increased from 146,000,000 marks to 249,000,000 marks, while inland bills of exchange, loans, and cash credits have been but slightly changed. The reduction of the metal reserve covering the paper money is very great. In the third week of December the reserve was 1,068,000,000 marks, while one week later it was only 945,000,000 marks.

Per Commerce Report of April 12, 1919, the Bank of Finland notes in circulation December 31, 1918, amounted to 1,156,200,000 Finnish marks.

RUSSIAN COINS NOT LEGAL TENDER IN FINLAND.

[From the Numismatist, June, 1918.]

The Finland Senate has decided that Russian coins will not be accepted in payments in Finland.

FRANCE.

Coinage executed at the Paris Mint during the year ended Dec. 31, 1918.

No gold was coined during the years 1917 and 1918; French, colonial, and foreign fractional silver coinage executed at the Paris mint during the year 1917 was 142.7 million francs (\$27,541,100); during the year 1918, 115.4 million francs (\$22,272,200). In 1918 the fractional silver coinage for France alone was 92,410,595 (\$17,835,245), or 30.8 per cent of the total coinage of the previous 35 years.

The law of August 2, 1917, authorized minor coinage to the amount of 15 million francs (\$2,895,000). Of this amount, 2,110,986.10 francs (\$407,420) was coined during the calendar year 1917 and 9,422,603.70 francs (\$1,818,563) during 1918, making a total of 11,533,589.80 francs (\$2,225,983). It is expected that the remaining 3,466,410.20 francs (\$669,017) will be executed during the year 1919. The minor coinage executed during the year 1918 was 1,068 per cent of the yearly average since 1880.

The gold withdrawn from circulation during the year 1918 amounted to 1,005 francs (\$194).

The total issue of the Napoleon III silver coins ordered demonetized by the law of March 22, 1918, was 177,062,818.10 francs (\$34,173,124). That law ordered the withdrawal and demonetization of the 2 franc, 1 franc, 50 centime, and 20 centime silver pieces bearing the crowned head of Napoleon III (Bulletin de Statistique, March, 1918). The object in view was principally to increase the circulation of fractional silver coins without reducing the reserves of 5-franc pieces of the Bank of France and without purchasing silver bullion, which was difficult to do and could only have a negative influence upon our foreign exchange; in other words, we were simply utilizing our abnormally hoarded reserves. Besides, the measure would

improve the status of the silver coins in circulation by retiring the coins minted 50 years ago and replacing them by new coins. Withdrawal and recoinage are still in process. During the year 1918 coins of the various denominations were withdrawn to the face value of 19,173,211 francs (\$3,700,430), from which new coinage amounting to 17,897,337 francs (\$3,454,186) has been made.

To maintain the amount of fractional silver coins in circulation, provided by the monetary convention of November 4, 1908, additional fractional coins were minted in 1917 as well as in 1918 by melting 5-franc silver pieces. The face value of such coins melted in 1918 was 46,652,015 francs (\$9,003,839); the face value of the new coinage obtained therefrom was 49,817,206 francs (\$9,614,721).

Finally, to meet the country's further demand, and in accordance with article 2 of the convention of November 4, 1908, the mint proceeded to strike new fractional coinage from bullion, the amount of which was 24,696,052 francs (\$4,766,338). On this occasion, as on similar occasions since 1914, the powers signatory to the aforesaid convention were notified that, as soon as circumstances permit, 5-franc pieces, to the same amount in fine weight as the additional fractional coins issued, will be retired and demonetized.

COINAGE EXECUTED AT THE PARIS MINT DURING THE YEAR ENDED
DECEMBER 31, 1917.

The face value of fractional silver coins executed during the year 1917, from melted 5-franc pieces, was 28,124,389 francs (\$5,428,007).

The face value of the 5-franc pieces melted during the year 1917 was 26,347,985 francs (\$5,085,161).

During the year 1917 there were minted at the Paris mint from bullion 33,110,714 francs (\$6,390,368) of 2-franc pieces, and 53,343,011 francs (\$10,295,201) of 1-franc pieces, making a total of 86,453,725 francs (\$16,685,569).

AUTHORIZED ISSUE OF NOTES.

[From Commerce Reports, Oct. 30, 1918.]

By a decree of September 8, 1918, the maximum authorized issue of notes of the Bank of France and its branch offices was raised to 33,000,000,000 francs.

BANK NOTE CIRCULATION.

[From the Commercial and Financial Chronicle, New York, June 1, 1918.]

On July 30, 1914 the amount of notes of the Bank of France in circulation amounted to 6,683,184,785 francs (\$1,289,854,663), and on February 21, 1918, it reached 23,986,287,440 francs (\$4,629,353,476)—an increase of 17,303,102,655 francs (\$3,339,498,812), or 286.2 per cent.

The growth of the fiduciary circulation and the metallic reserve is seen from the following table:

Date.	Notes in circulation.		Metallic reserve in vaults.	
	<i>Francs.</i>	<i>U. S. dollars.</i>	<i>Francs.</i>	<i>U. S. dollars.</i>
Dec. 24, 1913.....	5,713,551,290	1,102,715,399	4,157,454,630	802,388,744
July 30, 1914.....	6,683,184,785	1,289,854,663	4,766,674,306	919,968,141

Dec. 30, 1915.....	13,309,850,045	2,568,801,059	5,367,375,464	1,035,903,465
Dec. 28, 1916.....	16,678,817,915	3,219,011,858	3,677,696,015	709,795,331
Dec. 27, 1917.....	22,336,798,710	4,311,002,151	3,562,073,569	687,480,199
Mar. 7, 1918.....	24,650,026,960	4,757,455,203	3,588,477,815	692,576,218

According to the report of the Banque de France for 1917, about 2,500,000,000 francs (\$482,500,000) of its cash reserves were exported in 1915 and 1916, whereas in 1917 this sum reached only 450,000,000 francs (\$86,850,000), of which 20,000,000 francs (\$3,860,000) were shipped to neutral countries, the remainder representing gold loaned to the British treasury in accordance with the articles of agreement entered into by both Governments. Special credit arrangements since the entrance of the United States into the conflict necessitated no further outflow of gold to that country. During the year the gold reserves of the bank of France increased by 228,000,000 francs (\$44,004,000), bringing the total amount of gold secured from the public since the beginning of the war to 2,227,000,000 francs (\$429,811,000).

LAW PROHIBITING THE IMPORTATION OF GERMAN MONEY.

[From Bulletin de Statistique, Paris, November, 1918.]

A law of November 26, 1918, prohibits the importation of German bank notes, coins or any other kind of monetary media.

FRENCH CURRENCY IN ALSACE-LORRAINE.

[L'Economiste Européen, Dec. 13, 1918, p. 374.]

By decree of the French Government, on December 15, 1918, German currency ceased to circulate in Alsace-Lorraine, and French currency took its place.

INTERNATIONAL BANK NOTE.

Details of an interesting proposal, published in 1917 by Maurice Duclos, for the issue of an international bank note to pass at par (or such slight discount as would represent transportation and insurance costs), for use in settling international balances, have come to hand. The proposal provides that the guaranty of the stock of notes issued would be assumed by each country in proportion to its share in the issue; the basis of the issue would be gold, but the backing of the notes would be, principally, the economic wealth (or the credit) of the issuing countries; the notes would represent, expressed in the currencies of the principal countries of the world, the equivalent of 1 to 100 kilograms of gold (approximately \$660 to \$66,000); and an international clearing house would be maintained.

Imports of gold and silver.

LIMITS OF MONEY EXPORT.

[From the *Commercial and Financial Chronicle*, Aug. 24, 1918.]

In July, 1918, a Government decree was issued forbidding anyone from taking more than 1,000 francs in French, Russian, or American money outside of France.

VALUE OF MARK FIXED AT 166 FOR 100 FRANCS.

[*Commercial and Financial Chronicle*, New York, Feb. 4, 1918.]

Advices from the Associated Press with the American army of occupation under date of December 27, stated that beginning December 28 the exchange on marks throughout the occupied area would be 166 marks for 100 francs.

RETURN BY GERMANS OF STOCKS TAKEN FROM FRENCH BANKS.

[From the *Commercial and Financial Chronicle*, New York, Feb. 4, 1918.]

The return by the Germans of stocks taken from the banks of northern France, amounting to approximately 6,000,000,000 francs, was reported in Paris advices (Havas) to the daily press on December 25.

FINANCIAL CONDITIONS.

[Consul General A. M. Thackara, Paris, in Supplement to Commerce Reports, Sept. 20, 1918.]

The year 1917, all things considered, was not a financially unsatisfactory one in France. Industrial and commercial progress was made in comparison with the previous year, as is evidenced by a considerable increase in the revenue derived from the stamp duty on bills and from the greater gross receipts of the principal railway systems.

The régime of the moratorium has been partly abridged and is practically now confined to bills of exchange. There was a further decrease in the amount of the moratorium bills held by the Bank of France, which at the end of 1916 was 1,340,800,000 francs, and at the end of 1917 but 1,140,800,000 francs. When it is remembered that on October 1, 1914, the Bank of France held 4,476,000,000 francs of this paper, the situation must be considered satisfactory and a palpable sign that the French commercial community has done and is still doing its best to meet all engagements and to free itself from its obligations toward others.

* * * * *

DECREASE OF METAL RESERVE.

The official rate of discount of the Bank of France during the year remained at 5 per cent, at which figure it has been since 1914.

By the decree of September 10, 1917, the authorized limit for the issue of bank notes of the Bank of France was raised to 24,000,000,000 francs. At the end of 1916 the notes outstanding amounted to about 16,675,000,000 francs, and by the end of 1917 they were about 22,336,000,000 francs. On the other hand the comparative deposits of gold held against this unprecedented amount of notes were 5,082,000,000 francs at the end of 1916 and 5,350,000,000 francs at the end of 1917.

The amount of silver held by the Bank of France at the end of 1917 was 247,000,000 francs, as against 296,000,000 francs at the end of 1916, a decrease of 49,000,000 francs. This decrease was caused by the necessity of putting into circulation a large amount of silver change to replace the coins which had been hoarded, and also perhaps to meet a demand which had arisen from an increase of business on a cash basis.

The amount of gold actually held in the vaults of the Bank of France at the end of 1917 was but 3,313,000,000 francs and the balance of 2,037,000,000 francs appears in the statement of the bank under the heading of "gold in foreign countries," of which 1,955,000,000 francs has been loaned to the Bank of England in cover of credits for a considerably larger amount made to the French treasury, it being understood that this gold is to be returned to the Bank of France within a certain period after cessation of hostilities.

INCREASED ISSUE OF BANK NOTES.

Of course the enormous amount (22,336,000,000 francs) of outstanding bank notes can not be viewed without concern, and had it not been led up to by progressive stages no doubt it would have been viewed with alarm. This increase, however, in the issue of paper money is by no means confined to France. It is practically universal and even the neutral countries have not been able to escape from this movement, although it is true that these latter have been able to considerably increase their metallic reserves. Spain at one time during the year had its paper currency covered to the extent of 100 per cent, Holland 87 per cent, Switzerland 83 per cent, and Norway 88 per cent. By the end of the year this standard was in most cases well below these limits; in France the percentage of the metallic cover which at the beginning of the year was about 31 per cent became gradually reduced to about 25 per cent in December, and in Germany where the percentage was also about 31 per cent at the beginning of the year the level fell to 22 per cent at the end.

There is no doubt that the large margin between the amount of paper issued and the gold reserves has thrown considerably out of gear the doctrinal canons of pre-war economists, but experience has shown that the rôle of gold has been exaggerated, and that the real basis of a paper currency must, in the last analysis, be the credit and the standing of the country in which it is issued.

THE FOREIGN EXCHANGE SITUATION.

The difficulty of maintaining the relative value of the franc as compared with other currencies was continued during 1917, and the increasing volume of the imports, in spite of government restrictions, not being compensated for by an increase in exports, gave no hope of any improvement in the foreign-exchange situation. However, America's entrance into the war immediately affected the rates for the dollar and the pound sterling and a marked improvement took place.

Below are given the average monthly rates of exchange for sight sterling and the demand rate for the American dollar during 1917, with the highest and lowest for each month:

Months.	Pound sterling			Dollar.		
	Average.	High.	Low.	Average.	High.	Low.
January.....	<i>Francs.</i> 27.80	<i>Francs.</i> 27.81½	<i>Francs.</i> 27.79	<i>Francs.</i> 5.83½	<i>Francs.</i> 5.83½	<i>Francs.</i> 5.83½
February.....	27.81½	27.82½	27.79½	5.83½	5.83½	5.83½
March.....	27.82½	27.83	27.82	5.83½	5.83½	5.83½
April.....	27.83	27.79½	27.16	5.83½	5.83½	5.83½
May.....	27.22½	27.26½	27.19	5.75½	5.82	5.70
June.....	27.30½	27.39½	27.22½	5.71½	5.71½	5.71½
July.....	27.35½	27.65	27.21	5.72½	5.73½	5.71½
August.....	27.42½	27.51	27.20	5.74½	5.80½	5.71½
September.....	27.50½	27.59	27.42	5.76½	5.77½	5.75½
October.....	27.46½	27.53½	27.27	5.77½	5.78½	5.75½
November.....	27.32	27.40	27.22	5.76½	5.78	5.70
December.....	27.22½	27.26	27.20½	5.73½	5.75	5.70½
				5.71½	5.72	5.70

The rates of exchange with neutral countries compared unfavorably with 1916; however, the payments which France has to make in these countries are relatively small as compared to its indebtedness in England and America.

The Government, in order to control, in a measure, the sale of foreign exchange and to check the exportation of French capital, decreed that from the month of October, bankers should keep a record of all their exchange operations with the name, address, and nationality of the persons with whom such operations had been effected.

The Bank of France, which before supplying exchange required the applicant to furnish proof of the commercial necessity of the transaction, continued to be the great seller of foreign exchange and claims that since its intervention in this business in 1915 it has furnished 10,500,000,000 francs to the commercial community here; the means of doing so having been very largely provided by the treasury from advances made in turn to it by the British and American Governments. It has stabilized its rates, selling without change dollars at 5.70 and sterling at 27.15, and the fixation of these arbitrary rates materially affected the rates ruling on the open market.

ISSUE OF EMERGENCY WAR MONEY.

[From the Bankers' Magazine, London, May, 1919.]

Toward the end of 1914 the invader was almost knocking at the gates of Paris, and those steps which common prudence dictated at once were taken to provide against any break in the continuity of the industries commonly practiced in the French capital. One of the precautions was to move the mint to a safer locality. With this end in view, its operations were transferred to Castelsarrasin, a town situated in the Department of Tarn et Garonne, much farther off than Paris from the military zone. Silver coins of the denominations of 1 and 2 francs which were struck in this town during the temporary sojourn of the mint bear the letter C upon the reverse.

War operations having caused scarcity of copper and nickel, municipalities, chambers of commerce, mines, etc., were empowered to issue subsidiary coins for use in their localities. Copper coins were struck in a few districts, such as Bordeaux, Lyon, Ouveillan, and Toulouse. Brass was selected by Digoin as material for a 10-franc piece, and by Bone (Algeria) for denominations of a franc and a half franc. However, it was mostly employed for the smaller fractions of a franc, as for example in La Rochelle, Montpellier, Nantes, and Toulouse. Aluminum was given a decided preference, which is not surprising in view of the favorable characteristics of this metal. It was adopted as medium in Besancon, Billancourt, Blois, Bougie (Algeria), Carcassonne, Le Havre, La Rochelle, Marseille, Montpellier, Narbonne, Neuilly-sur-Seine, Perpignan, Rouen, Saint Sulpice, Vanves, and Vincennes. These pieces are either round or octagonal. Zinc also was popular. Coins were struck in this material by Bourg, Cette, Le Puy, Lyon, Narbonne, Région Provencale, Saint Sulpice, and Versailles. Some of these coins were coated with nickel. Iron was utilized by Bayonne, Bordeaux, Pau, Tarbes, and Valentigney. Some of these coins are tinned. The varieties of these coins or tokens circulating in France and Algeria exceed 100 in number.

A far greater number of local authorities decided to issue small pieces of cardboard in lieu of disks. These 5, 10, and 25 centime carton pieces are round, square, rectangular, hexagonal, and octagonal. Some of the cartons are coated with gelatine, but most are of undressed cardboard. Many of them are of quite pleasing design.

Tradesmen—grocers, bakers, drapers, milkmen, butchers, barbers, chemists, restaurateurs, coal merchants, druggists, and motor owners—all entered upon the novel industry of supplying the public with cardboard cash.

Municipalities and rural boards were responsible for the greater number of tokens, but companies relating to mines, tramways, water, electricity, and steel works, etc., consulted their own and their employees' convenience by providing these useful temporary substitutes for metal coins.

The very public themselves seem to have entered into organized participation, for 5, 10, 25, and 50 centime pieces were put into circulation by a body possessing this high-sounding title: "The Restaurant Customers' Union of the Western Suburbs of Paris."

Notes, some of considerable artistic design, were issued by chambers of commerce and other authorities of denominations of 25 centimes and upward. Most of these bear an inscription somewhat to the following effect: This note, guaranteed by the deposit of an equal sum at the Bank of France, is exchangeable against notes of the Bank of France in the district if presented before such and such a date.

Some notes with somewhat elaborate design are executed in faint blue and pink, others are bold and vermilion, while still others are printed in black upon gray paper.

The issue of money by local authorities bearing the name of the town or district in which they were intended to circulate must have helped to make it popular, appealing as it did to local pride as well as patriotism.

In one issue 70 names of towns and hamlets (e. g., Miraumont, Courcellette, Le Transloy, Bapaume, Martinpuich, etc.) which guarantee the notes are recorded in minute lettering within a space less than 2 inches long by half an inch broad.

¹ Including amounts held as cover for treasury notes, which amounts, since September, 1915, have been 120,000,000 marks.

To the 23,648,000,000 marks of imperial bank-note circulation there should therefore be added 10,170,000,000 of loan-bank notes, making a total of 33,818,000,000 marks of fiduciary currency issued by the two bank authorities. These notes are apparently put into circulation largely by the Reichsbank, which receives them from the Darlehenskassen in exchange for its own notes. The Reichsbank retains part of the loan bank notes, which, according to the law of August 4, 1914, may be counted as part of the bank's one-third legal reserve cover for its own bank notes, and to a limited extent also as cover for the 360,000,000 treasury notes, the maximum issue authorized at the outbreak of the war. On January 31, 1919, 5,988,000,000 marks of the loan-bank notes were held in the Reichsbank, which, added to the 10,170,000,000 in circulation, brings the total amount of such notes outstanding to 16,158,000,000 marks, indicating that loans aggregating this amount were made by the loan banks.

THE GERMAN REICHSBANK IN 1918.

[Extracts from report of Franklin Mott Gunther, secretary American Legation, The Hague, Netherlands, in Commerce Reports, July 8, 1919.]

* * * The amount of gold in possession of the Reichsbank decreased in the year reported from 2,406,000,000 marks to 2,262,000,000 marks. The 312,740,000 marks taken over from the soviet republic in gold were, as is known, transferred to Paris in accordance with the terms of the armistice. In consequence of the withdrawal from circulation of the 2-mark pieces, but above all owing to the scarcity of currency, the amount of small coins in the possession of the bank diminished from 181,400,000 marks to 19,900,000 marks. The amount of metal in the possession of the bank attained its highest point on October 15, when it reached 2,662,929,000 marks, the average for the year being 2,487,581,000 marks, which is 45,018,000 marks less than the 1917 average. The amount of loan-office notes in the possession of the bank increased from 1,304,000,000 marks to 5,263,000,000 marks, although the bank which had received much larger amounts from the loan offices, was obliged to put the greater part into circulation again. It was chiefly the large loan-office notes not adapted to circulation which were kept back. After various fluctuations the amount of imperial treasury notes decreased further from 10,300,000 marks to 3,600,000 marks at the end of the year.

* * * * *
The nonmetallic reserve cover (bills, checks, and discounted imperial treasury notes), the average amount of which during the year was 16,519,699,000 marks, showed an increase on December 31 to 27,415,712,000 marks. As the purchases of trade bills remained within restricted limits, owing to the prevailing abundance of money, the credits granted to the Empire still occupied by far the most prominent place among the negotiable securities.

* * * * *
The amount of notes in circulation, which was 11,467,000,000 marks at the beginning of the year, and 22,187,000,000 marks at the close of the year, showed an average circulation for the year of 13,680,000,000 marks, as compared with 9,010,000,000 marks in the previous year. Moreover, on December 31, 1918, there were still 10,242,000,000 marks of loan-office notes in circulation as against 6,264,000,000 marks at the close

of the previous year. Of the Reichsbank notes in circulation in 1918 an average of 34 per cent was covered by cash reserves (gold and small coin, imperial treasury notes, and loan-office notes). The worst figure as regards the amount of cover was reached on March 31, being then 33.5 per cent, but the amount of cover never fell below the one-third prescribed by law. The gold cover of the notes decreased in amount to 10.2 per cent on December 31, 1918, as compared with 21 per cent at the end of 1917, and 31.3 per cent at the end of 1916.

* * * * * *

The immense increase in the demand for currency compelled the Reichsbank to adopt emergency measures, such as printing a new Reichsbank note for 50 marks on ordinary printing presses, these notes being printed to the value of 2,085,000,000 marks in November, and 1,661,000,000 marks in December. In addition, there was the increased issue of municipal emergency notes, and also an increased issue of notes by the various private banks entitled to make such issues. Nevertheless, the measures under way for the improvement of the current method of paying debts were further developed, and resulted in the establishment of the "Department for the Promotion of Payments on the Non-Cash Basis" as a special bureau, which outlined a general plan for securing some uniformity of procedure.

THE LACK OF INSTRUMENTS OF PAYMENT IN GERMANY.

[Commerce report, Feb. 3, 1919.]

[The following translation from a speech made by Herr Havenstein, president of the Reichsbank, will be of interest as showing the scarcity of circulating media in Germany in the weeks immediately preceding the armistice. The address in the original was published in the *Frankfurter Zeitung* of Oct. 31, 1918.]

At the meeting of the central committee of the Reichsbank, President Havenstein, after remarking that the development of the capital of the bank during October, 1918, in spite of all the increasingly difficult circumstances which had arisen during that time, had, on the whole, been satisfactory, then continued as follows:

"With regard to the circulation of instruments of payment during the period from September 23 to October 23, claims unparalleled in its history were made on the bank. The political and military events of the past few weeks have, unfortunately, not been met by the population with the prudence which is now doubly needed; but from the west frontier and penetrating far into the country, many people feared, totally without reason, the possibility of a moratorium, of which no one dreams, or of the insolvency of the banks, savings banks, etc., which is likewise out of the question. A still more extravagant anxiety was felt, which induced large circles of people to withdraw their deposits without reason from the banks and savings institutions and in an increasing measure to store negotiable paper to an extent which surpassed that known during the first weeks of the war. Unfortunately people of all classes of society, both in town and country, have been guilty of this stupid conduct. The total circulation of paper currency in bank notes and treasury notes increased during the period from September 24 to October 23 by 2,651,700,000 marks (\$631,104,600 normal value), against 734,000,000 marks (\$174,692,000) in the corresponding period of last year. As early as from July 1 to September 30 the Reichsbank had been obliged to add to the instruments of payment (for purposes both of supply and demand) the round sum of 4,000,000,000 marks (\$952,000,000), which far surpassed the amount for all preceding quarters."

PAPER CURRENCY CRISIS IN OCTOBER.

"While ordinarily the first three weeks subsequent to the quarterly balance brought a considerable reduction in current means of payment and a considerable reduction of currency—from October 1 to 23, 1917, there was a reduction of 58,000,000 marks (\$13,804,000); from April 1 to 23, 1918, the reduction was 700,000,000 marks (\$166,600,000)—the demand continued during the first three weeks of October, 1918, as a result of such storing, and withdrew from the Reichsbank a further 1,149,300 marks (\$273,533.40) of new currency. While in this corresponding period of the eighth war loan, viz, from January 1 to April 23, 1918, the paper currency increased only by 539,000,000 marks (\$128,282,000), not less than 5,484,200,000 marks (\$1,305,239,600), or tenfold the first amount, had to be put into circulation from July 1 to October 23 of the year 1918. This surpassed even the highest demand during the war, viz, the seventh war loan, from July 1 to October 23, 1917, which amounted to 3,125,000,000 marks (\$743,750,000). Even though the Reichsbank was well prepared to meet more than the usual requirements of the end of the month, the need of instruments of payment which made itself felt on this occasion with extraordinary force by far exceeded these abundant reserves. It was, too, an especially unhappy coincidence that, on

the one hand, it came directly after the unusually large requirements for the end of September—the largest during the war—and that, on the other hand, the official printing press during the preceding weeks was not in a position to meet the requirements of the Reichsbank owing to the calling to the army of a number of its workers and the absence of hundreds of others ill with the grippe."

STEPS TAKEN TO MEET THE EMERGENCY.

"During the last few weeks this has grown into a far-reaching, serious lack of instruments of payment and has caused grave unrest in circles not hitherto panic-stricken. Nevertheless it may be anticipated with certainty that in a short time we shall have mastered this situation. As early as the first days of October, wherever the danger of a growing lack of means of payment could be met, the towns were asked to prepare with the utmost expediency notes up to the value of 50 marks. The majority of the towns approached in this matter expressed their willingness to comply, so that, of this emergency money up to November 1 more than 400,000,000 marks (\$95,200,000), and during the weeks following a similar amount, was put into circulation. For the purpose of preparing immediately and uniformly over the whole country a large quantity of new means of payment, the coupons of the 5 per cent war loan which fall due on January 2, 1919, are declared by decree of the Bundesrat to be legal means of payment up to the due date, when they, as heretofore, will be exchanged for other legal currency. By this means the round sum of 600,000,000 marks (\$142,800,000) is forthwith prepared; which, as soon as the issuance of the papers of the eighth war loan is over, will be increased by a further 200,000,000 marks (\$47,600,000). Moreover, a further advantage accrues to the owners of these war loans in being able to use the interest coupons as means of payment two months earlier than the due date, or in being able to pass them to their credit two months prior to maturity.

"The four private banks of issue still in existence augmented their output to the legal limit, for which output they are covered by the Reichsbank. The employees of the official printing press have been or will be returned to their work; so that, in a short time, it will be in a position greatly to increase the quantity of notes issued. And the Reichsbank itself has given instructions to a large number of printing works to prepare a new bank note of 50 marks. The printing and control is so organized and expedited that the issue of this new note will take place in large numbers in two or three days.

"So it may be expected that in a few days the lack of means of payment will be less acutely felt, and that in a few weeks it will no longer exist. At all events it must be expected that the section of the population who now stupidly store money, or without need therefor withdraw their capital from the banks, will become more prudent."

GERMANY BUYS DUTCH SMALL COINS.

[From the Numismatist, March, 1918.]

A press dispatch from the Hague says that Dutch (Holland) coppers and nickels are being smuggled into Germany in such quantities that there are scarcely any cent or 5-cent pieces left in circulation. Six marks (about \$1.50) are paid by German agents for 100 Dutch cents (40 cents), and 20 marks (\$5) for 100 nickel 5-cent pieces (\$2).

ZINC COINS IN CIRCULATION.

[From the Numismatist, March, 1918.]

Since the Germans have been seizing in occupied Belgium nickel coins for their war necessities, zinc coins have been put in circulation. It is announced that 50-centime pieces of the same metal will be immediately struck.

WITHDRAWAL OF NICKEL COINS IN GERMANY.

[From the Numismatist, June, 1918.]

A press dispatch from Amsterdam of May 15 states that Germany is calling in her nickel coinage, the metal being needed for projectiles, and is substituting zinc for minor coinage purposes, an issue of 10,000,000 marks' (\$1,930,000) worth of zinc coins having been authorized. More than two years ago Germany was supposed to have called in the nickel coins and substituted iron for these pieces.

BRITISH DECIMAL COINAGE.

[Alfred Nutting, clerk in American consulate general, London, Dec. 20, in Commerce Reports, Jan. 15, 1918.]

The question of a reform in the British coinage system has been urged for some time, and the movement has now gathered weight to such an extent that the advantages of the decimal system are more generally recognized. In a report issued by the British Decimal Association details are given of a system which has been agreed upon as convenient and desirable by the Institute of Bankers, the Association of Chambers of Commerce of the United Kingdom, and the Decimal Association after lengthy deliberation in joint conference by these bodies.

In considering the question of a change from the present to a decimal system the first difficulty to be dealt with is the fact that the penny is not a decimal submultiple of the pound sterling. It is considered wholly undesirable that any change should be made in the pound sterling, because of its universal recognition in the settlement of international transactions, and it has been decided, therefore, to retain it as the British standard monetary unit and to eliminate the present "penny" coinages, replacing the latter units by an entirely new series. The silver coins of the values of crown (5s.=\$1.22), half-crown (2s. 6d.=\$0.61), and three-pence (\$0.06) are also to be withdrawn.

SUGGESTED COINS UNDER NEW SYSTEM.

The suggested coins are to be termed "mil," and the recommendations jointly agreed upon by the bodies above mentioned advise the adoption of the following table of currency:

Coins.	Value in—		Equivalent value in present currency.
	Pounds.	Mils.	
Gold or notes:			
Sovereign.....	1.000	1,000	Sovereign.
Half sovereign.....	.500	500	Half sovereign.
Silver:			
Double florin.....	.200	200	Four shillings.
Florin.....	.100	100	Two shillings.
Half florin or shilling.....	.050	50	Shilling.
Quarter florin or sixpence.....	.025	25	Sixpence.
Nickel:			
10-mil piece.....	.010	10	2.4 pence.
5-mil piece.....	.005	5	1.2 pence.
Bronze:			
4-mil piece.....	.004	4	0.96 pence.
3-mil piece.....	.003	3	0.72 pence.
2-mil piece.....	.002	2	0.48 pence.
1-mil piece.....	.001	1	0.24 pence.

It is urged that by this system it will be possible to adjust the price of goods or services more equitable and in more finely graduated proportions to the fluctuations in cost than is now possible. Under present conditions, it is pointed out, while the cost of many necessities may increase by 20 per cent, the retailer must raise the prices of halfpenny goods and services by 100 per cent to 1d., or of penny goods by 50 per cent to 3 halfpence, for, although farthings (one-quarter penny) are coined, they are rarely used. British banks do not accept for deposit or pay out any fraction of a penny, but if the suggested system were adopted the smallest coin in value would be recognized.

TOTAL NUMBER OF UNITS THE SAME—THREE DECIMAL PLACES.

It is pointed out that notwithstanding the larger number of coins of low denomination the total number of units is no more than at present owing to the elimination of three silver and all the present bronze coins.

Under the "mil" system it is necessary to use three figures after the decimal in the case of the pound sterling in order to admit values lower than about $2\frac{1}{2}$ pence, or 10 mils.

In regard to the proposed two nickel coins, it is pointed out that risk of their being confused with silver coins could be prevented by giving them a scalloped edge or a variation in outline. Attention is also directed to the fact that under the suggested system the present values of the gold and silver coins in the scheme remain unaltered, the new nickel and bronze alone introducing any change.

CASH HOLDINGS AND NOTE CIRCULATION.

[From the Statist, London, May 31, 1919.]

The cash holdings and note circulation of the banks of the United Kingdom and Ireland, exclusive of the Bank of England, at the end of 1918, were:

	Pounds sterling.	United States dollars.
Cash in hand and in other banks.....	354, 079, 000	1, 723, 125, 454
Notes in circulation.....	56, 324, 000	274, 100, 746

CURRENCY NOTE CIRCULATION.

[From the Economist, London, Feb. 15, 1919, p. 219.]

The currency note circulation December 31, 1918, against which there was a gold reserve of £28,500,000 (\$138,695,250), was £323,240,501 (\$1,573,049,898).

According to the Economist, London, February 1, 1919, page 139, the London Joint City & Midland Bank held, on December 31, 1918, £8,000,000 (\$38,932,000) in gold coin.

EXPORTS OF NOTES PROHIBITED.

[From the Commercial and Financial Chronicle, New York, Sept. 28, 1918.]

An order-in-council has been issued prohibiting the exportation of French and United States notes except to the countries of origin.

GREECE.

EXCHANGE QUOTATIONS ON AMERICAN DOLLARS.

[From Supplement to Commerce Reports, Oct. 2, 1918.]

The respective high and low exchange quotations on the American dollar during 1917 were as follows: Drachma (paper), 5.215 and 5.10; franc (Paris), 5.83 and 5.65, and the pound (sterling), \$4.70 and \$4.60. These figures are on a paper basis. To arrive at the gold basis 25 per cent must be deducted. Saloniki banks now transact their American business directly with banks in the United States and quotations are expressed in American dollars.

ITALY.

COMPARATIVE TABLE OF GOLD HOLDINGS AND NOTE CIRCULATION, 1914-1918.

[From the Federal Reserve Bulletin, Sept. 1, 1919.]

Gold holdings.

[In millions of lire.]

Date.	Bank of Italy.	Other two banks of issue.	Government. ¹	Total banks and Government.
Dec. 31, 1914.....	1,118	279	156	1,553
Dec. 31, 1915.....	1,077	287	156	1,520
Dec. 31, 1916.....	900	257	168	1,325
Dec. 31, 1917.....	836	235	167	1,238
Dec. 31, 1918.....	818	231	164	1,213

¹ Total specie reserve held by the Treasury against Treasury notes issued.

NOTE.—The greatest loss of gold occurred during the year 1916, when Italy exported gold to allied and neutral countries in an effort to offset her unfavorable balance of trade in merchandise and to steady her rates of exchange.

Circulation of Government notes and notes of banks of issue.

ITALY REGULATES TRAFFIC IN GOLD.

[Consul General David F. Wilber, Genoa, June 10, in Commerce Reports, July 16, 1918.]

For the duration of the war and for six months after the conclusion of peace all persons in Italy who carry on the exchange of moneys or deal in articles made of gold must keep a special register for transactions of this kind. In this register must be entered all operations, whether of purchase or of sale, in gold coin.

The three banks of issue in Italy are authorized to receive, on special interest-bearing deposit, gold coins in legal circulation in the Kingdom as well as pounds sterling and dollars, and eventually other gold coins. These deposits may be withdrawn in the identical coin six months after the signing of the treaty of peace, from which date the deposits will cease to bear interest.

PRODUCTION OF GOLD IN PIEDMONT, ITALY.

[Vice Consul Dana C. Sycks, Turin, in Commerce Reports, May 23, 1919.]

The gold production in Piedmont was: For 1917, 3,500 lire (\$676, or 33 fine ounces) for 1918, 118,000 lire (\$22,774, or 1,102 fine ounces).

LUXEMBOURG.

There was a considerable amount of iron coinage executed at foreign mints for Luxembourg during the year ended December 31, 1918, but no gold or silver.

A very small quantity of gold and silver was used in the industrial arts during the calendar year 1918; gold and silver articles being mostly imported.

Approximate stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1918.

GOLD, SILVER, AND FOREIGN PAPER CURRENCY AT A PREMIUM.

[From Commercial Attaché Paul L. Edwards, The Hague, Jan. 2, 1919.]

Commencing with February, 1918, there has been a premium on allied bank notes and on gold coin of all nationalities. During the past few weeks the premium on bank notes has been noticeably diminishing, whereas the premium on gold has been increasing. Though there has been an export prohibition on gold, it is practically an undisputed fact that much of it is being smuggled into Germany. The high price of silver makes the metal value of the silver coin greater than its face or coin value.

GOLD RESERVE AND NOTE CIRCULATION IN DECEMBER, 1918.

[Consul Frank W. Mahin, Amsterdam, in Supplement to Commerce Reports, July 12, 1919.]

In the early years of the war, gold flowed in a great stream into the Bank of the Netherlands, in Amsterdam, chiefly from Germany and Austria. The gold reserve in the bank's vaults, in dollar equivalents, was \$65,124,000 when the war began. At the end of 1915, 1916, and 1917 it was \$172,000,000, \$203,000,000, and \$280,000,000, respectively. But the inflow ceased in 1918, the supplies being exhausted, and the gold reserve in the Netherlands Bank at the end of the year was \$276,000,000, slightly less than at the end of 1917. However, it should be noted that at one time in 1918 the reserve reached the unprecedented amount of \$285,300,000. Exportation of gold was prohibited, excepting shipments to some neutral countries as payment for purchases allowed by the Dutch Government. This accounted for the fluctuation in the reserve. The circulation of paper money amounted to 1,109,000,000 florins (\$445,818,000), and 60 per cent thereof was covered by gold, though the law required only 20 per cent.

INCREASE OF METAL STOCKS.

[By Consul General Soren Listoe, Rotterdam, Feb. 7, in Supplement to Commerce Reports, Apr. 24, 1918.]

Dutch gold stocks increased in 1917 just as in the preceding war years. The gold stock of the Netherlands Bank was \$280,689,506 on December 29, 1917, and \$236,216,190 on December 30, 1916. This increase is remarkable and well illustrates the present financial strength of the country. The price of unrefined gold remained at \$665.31 per kilo fine. Many industries dependent upon gold were inconvenienced because large quantities of this metal were systematically collected and hoarded in the banks. The gold holdings of the banks are estimated to be between four and five times as much as the amount on hand at the outbreak of the war.

The Netherlands silver market was more dependent upon the supply on hand than during the year 1916. Imports from London and New York were almost entirely cut off on account of shipping difficulties and export embargoes. The English export embargo on gold was not put into force until the beginning of October. Fortunately there was sufficient unrefined silver in circulation so that the needs of the Dutch market could be covered by refining the material on hand. The prices for unrefined silver fluctuated between \$25.73 at the beginning of 1917 and \$31.46 on September 25, which was the highest quotation.

NORWAY.

Coinage executed during the year ended Dec. 31, 1918.

Denomination.	Pieces.	Value.	
		<i>Kroner.</i>	<i>U. S. dollars.</i>

PORTUGAL.

The coinage of 50-centavo silver pieces during the year ended December 31, 1918, amounted to 362,920 escudos (\$392,135). There was also coined, during the year 1918, 1-centavo bronze pieces to the amount of 132,800 escudos (\$143,490) and 2-centavo bronze pieces to the amount of 48,400 escudos (\$52,296).

There was used in the industrial arts 3,996 kilograms (128,471 ounces) of gold from bars, old jewelry, etc., and 17,413 kilograms (559,828 ounces) of silver from same sources.

The monetary stock on December 31, 1918, consisted of 7,967,002 escudos (\$8,608,346) in gold coin and 37,617,843 escudos (\$40,646,079) in silver coin.

LAWS AFFECTING THE CURRENCY.

By decree of April 5, 1918, the 5-centavo notes, issued by the Santa Casa de Misericórdia of Lisbon, shall cease to circulate after June 30, 1918, and the mint shall issue notes of equal value (*Diário do Governo*, No. 84, 1st series, Apr. 23, 1918).

By decree of May 4, 1918, the governor of the colony of Timor was authorized to take the necessary measures to unify the monetary system of that colony (*Diário do Governo*, No. 113, 1st series, May 24, 1918).

THE BANK OF PORTUGAL.

[From the Bankers' Magazine, London, November, 1918.]

Among much other matter of interest, the quarterly circular of the London and Brazilian Bank for June gives a comparison of the position of the Bank of Portugal at the end of each of the past three years, and, as these returns in the ordinary course receive little publicity in this country, we reproduce the statement, which is as follows:

Items.	Dec. 31, 1915.	Dec. 30, 1916.	Dec. 31, 1917.
Balance at Bank of England.....		£100,000	£250,000
Notes in circulation ¹	<i>Escudos.</i> 115,019,948	<i>Escudos.</i> 140,377,915	<i>Escudos.</i> 193,131,127

¹ A decree of Dec. 28, 1916, fixed the maximum of note issue at 200,000,000 escudos.

NOTE.—1 escudo=\$1.0805 United States.

FOREIGN EXCHANGE IN 1917.

[Consul General W. L. Lowrie, Lisbon, in Supplement to Commerce Reports, Nov. 16, 1918.]

The value of the Portuguese escudo in 1917 fluctuated daily, the extreme values being from 58 to 65 cents for the New York draft value of an escudo, which normally is equal to about \$1.

CURRENCY OF PORTUGAL.

[From the Numismatist, February, 1918.]

A commerce report says that a law approved by the President of Portugal a short time ago prohibits during the war the exportation of Portuguese metallic currency other than necessary amounts carried by travelers leaving the country. According to the same decree, new coins of copper and nickel alloy and of bronze are to be issued to replace the coin of bronze and nickel alloy now in circulation.

RUSSIA.

NEW RUBLE CURRENCY IN NORTHERN RUSSIA.

[From the Commercial and Financial Chronicle, Jan. 11, 1919.]

New ruble notes for northern Russia, on the basis of 40 rubles to £1, have been arranged by the Allies, including America, with the provisional Government, to provide a stable foundation for Allied traders in making remittances there, according to

cable advices just received. The new notes will be issued only at Archangel at this fixed rate, against deposits made with the Bank of England, which will be "car-marked" to insure the convertibility of the notes. The new ruble will have a value of about 12 cents, against the normal value of 51½ cents of the old ruble.

PRODUCTION OF GOLD IN SIBERIA.

[From Commerce Reports, May 8, 1919.]

The following table, based on the data of the Russian minister of finance, shows the amount of pure gold from Siberia delivered at the State and private laboratories, inclusive of that brought by private prospectors, from 1908 to 1915:

Years.	Poods.	Troy pounds.	Troy ounces.	United States dollars.
1908.....	2,159	94,752	1,137,024	23,504,372
1909.....	2,511	110,200	1,322,400	27,336,434
1910.....	2,797	122,752	1,473,024	30,450,109
1911.....	2,969	130,300	1,563,600	32,322,481
1912.....	2,869	127,229	1,526,748	31,560,682
1913.....	3,059	134,250	1,611,000	33,302,326
1914.....	3,519	154,438	1,853,256	38,310,202
1915.....	2,760	121,128	1,453,536	30,047,256
Total.....	22,673	995,049	11,940,588	246,833,862

In 1903 Siberia yielded more than 75 per cent of the gold produced in Russia.

MINERAL PRODUCTION IN SIBERIA.

[Consul D. B. Macgowan, Vladivostok, Jan. 31, in Commerce Reports, May 2, 1919.]

It was reported by the press a few months ago that 600 poods of gold, valued at 74,000,000 rubles,¹ has just been delivered at Irkutsk, and that 400 poods more would soon be delivered from the Nadeshdinsky mines on the Lena River.

RESCUE OF 800,000,000 RUBLES OF RUSSIAN GOLD.

[The Commercial and Financial Chronicle, Nov. 9, 1918.]

The rescue of Russian Government gold valued at 800,000,000 rubles is reported in the following announcement made on November 4 by A. J. Sack, director of the Russian Information Bureau of New York, on the authority, it is stated, of the Russian Embassy at Washington:

"Russian Government gold valued at 800,000,000 rubles, taken from Petrograd by the Bolsheviks, has been saved at Kazan by the Omsk government, generally recognized as a foundation for the reorganization of Russia.

The gold, representing two-thirds of the reserve in the Russian treasury when the Bolsheviks gained control of the capital late in 1917 was transported by them to Kazan and thence to Samara. Agents of the Omsk government obtaining possession of it took the metal to Omsk.

News of the coup was cabled to Washington by I. A. Michailoff, secretary of finance at Omsk. The gold is worth approximately \$400,000,000.

RESTITUTION OF RUSSIAN GOLD.

[L'Economiste Européen, Dec. 13, 1918.]

On December 10, 1918, there arrived at Paris 320,000,000 francs in gold, turned over to the Allies by the Germans, who admit having received it from Russia by virtue of the treaty of Brest-Litovsk. The said gold was deposited at the Bank of France for the common account of the Allies.

THE MONOPOLY OF GOLD AND PLATINUM.

[From L'Economiste Européen, Paris, Feb. 8, 1918.]

The Russian High Economic Council, on January 15/28, decreed a monopoly of gold. The monopoly is applicable to commerce in gold in all its forms, except the

¹ Probably valued at the current rate for the ruble; with the ruble valued at par (\$0.5146) 600 poods of fine gold would be worth 12,697,750 rubles (\$6,532,258).

sale in detail of gold articles. The period granted for bringing gold to the treasury is one month.

Besides this, some days afterwards, a new decree ordered the confiscation, for the profit of the State, of all gold ingots and all gold articles of which the weight exceeds 67 grams. The owners of these articles are to have indemnification at the rate of 7.50 rubles (\$3.86) per gram. As to the ingots, they will be confiscated without indemnification.

Finally, the Pravda announced that the monopoly of platinum was instituted from January 28, similar to that of gold. All of the productive enterprises are bound to remit their products to the State.

BOLSHEVIST LENIN'S VIEW OF MONEY.

[From the Commercial and Financial Chronicle, New York, May 3, 1919.]

According to account of an interview, Lenin has this to say of money:

"Hundreds of thousands of ruble notes are being issued daily by our treasury. This is done not in order to fill the coffers of the state with practically worthless paper, but with the deliberate intention of destroying the value of money as a means of payment. There is no justification for the existence of money in a Bolshevik state, where the necessities of life shall be paid for by work alone. * * *

"Already even the hundred-ruble note is almost valueless in Russia. Soon even the simplest peasant will realize that it is only a scrap of paper not worth more than the rags from which it is manufactured. Men will cease to covet and hoard it so soon as they discover it will not buy anything, and the great illusion of the value and power of money on which the capitalist state is based will have been definitely destroyed.

"This is the real reason why our presses are printing ruble bills day and night without rest. But this simple process must, like all measures of Bolshevism, be applied all over the world in order to render it effective. Fortunately, the frantic financial debauch in which all the Governments have indulged during the war has paved the way everywhere for its application."

CURRENCY CONDITIONS.

[Prepared by the Russian Division, Bureau of Foreign and Domestic Commerce, Mar. 29, 1919. Published in Commerce Reports, Apr. 19, 1919.]

Under the popular name of "kerenki" have been circulated, since the latter part of the Kerensky régime, small notes in the denominations of 20 and 40 rubles. These notes are quite small and bear neither number nor signature. They are printed in huge sheets like postage stamps, except that the edges are not perforated for tearing off; generally they are cut up by means of shears, although more than once a penknife has served this purpose. Since its accession to power the soviet government has continued the issue of these notes, and the consensus of a number of estimates is that 50,000,000,000 to 60,000,000,000 have been issued, although the demand has been so great owing to the depreciation, and the organization of the treasury in such fluid times so poor, that the exact amount is not known to the soviet government itself. Recent advices from satisfactory sources indicate that, owing to an extreme shortage of paper and colors, the production of money has fallen from over 3,000,000,000 rubles per month to something like 1,250,000,000.

It should be noted also that besides the legal kerenki there exists a great quantity of counterfeit, which it is impossible to distinguish.

The bank notes in denominations of 250, 500, and 1,000 rubles, which were issued by the provisional government—often called the Kerensky government, although Kerensky himself was not premier until August 4, 1917—are not called kerenki. They are numbered and have signatures.

LIBERTY LOAN BONDS AS CURRENCY—CZAR NOTES, OR "ROMANOVKI."

The bonds of the liberty loan, in denominations of 20, 40, and 100 rubles, circulate as legal currency, but the people accept them unwillingly. There are also in circulation a large number of coupons of various loans, issues of the Peasants' Land Bank, the Bank of the Nobility, etc. The people disliked the coupons very keenly, because they were small narrow strips of paper, whereon the amount was difficult to distinguish amid the lettering.

The preferred currency, which has now practically disappeared, is the notes of the old régime of the Czar, which were handsomely printed. These are popularly known as "romanovki" and command a premium. Soon after the Bolsheviks took over the State Bank they attempted to continue the issue of the romanovki, but, as a matter of technique, they were unable to provide the necessary marks and were finally forced to discontinue these issues. Some quantities, however, were issued, among them the red 10's, known popularly as "krasny," and the blue 5's, known as "sinyi." It was not difficult to see, when one had a number of these in his possession at a time, that the numbers were not consecutive but identical. Experts are also able to point out the lack of other marks and features.

Various decrees and orders were issued by the soviet government on December 1, 1917, and during the year 1918, prescribing the use as legal tender currency, of liberty loan bonds, as well as interest coupons of all valid securities.

BOLSHEVIK NOTE CIRCULATION.

[From the Economist, London, June 28, 1919, p. 1175.]

The Gazeta Petchatnikoff of Moscow states that on January 1, 1919, the amount in circulation (credit notes issued by the imperial, provisional, and Bolshevik governments) was 55,263,000,000 rubles. The amount on October 25, 1917 (the end of the Kerensky régime) is given as 18,917,000,000 rubles; and on January 1, 1918, as 25,461,000,000 rubles. * * *

According to the estimate of the Pravda, the credit-note circulation at the end of June (1919) would be only about 70,000,000,000 rubles; but the Moscow critic Vasilieff, the Berlin Golos Rodinui, and other authorities, put the amount at between 85,000,000,000 and 100,000,000,000 rubles.

BOLSHEVIK PRESSES PRINT "MONEY" DAY AND NIGHT.

[Special cable from the London Times to The Washington Post. Jan. 23, 1919. Copyright, 1919, by the Public Ledger Co.]

OMSK, January 22.—A local paper prints figures relating to the output of paper money by the Bolsheviks, reproduced from the Bolshevik press, the printing being done in Petrograd and Penza, the presses running day and night with three shifts. Petrograd is reported to turn out 90,000,000 daily and Penza 220,000,000. Not only are Bolshevik notes being issued, but also those of prerevolution and Kerensky times, two of the latter varieties being indistinguishable. Whether the figures are correct or not, it is certain the Bolsheviks are flooding Russia with enormous quantities of notes, the redemption of which will be a most serious problem facing the government in the future.

These notes are forced upon the Russian peasantry, and it is a question whether any Russian government will ever be able to repudiate even the purely Bolshevik output. Lenin, it will be remembered, taxed Kerensky with establishing and maintaining his government on paper money, thereby reducing the people to hunger and want. Along the Ural front Bolshevik soldiers, in addition to their ordinary pay, receive 50 rubles an hour when in action, while those who took part in the capture of Ufa got 1,000 rubles apiece as bonus. It says a great deal for the new army of the Omsk government, that it resists the financial temptations continually dangled before it by the Bolsheviks.

RUSSIA'S PAPER MONEY.

[From The Numismatist, May, 1919.]

The following article from the New York Evening Post, from its special correspondent at Stockholm, gives descriptions of the different kinds of paper money issued in Russia by the Bolshevik government, which explains why, according to newspaper reports, business houses in parts of Russia are closing their doors and refusing to do business on the kinds of money in use there:

"The Bolshevik's financial newspaper, *Finanzi i Narodnoe Khozaistvo*, does not ignore the fact that questions of note circulation and gold reserves exist, and it shows extraordinary interest in 'The condition of the American Federal reserve banks,' 'The exploitation of graphite in Madagascar,' and other recondite themes. It is an elaborate and by no means always fanatically Bolshevik production. But it has never considered it necessary to publish even approximately the sum of credit notes issued by the soviets' commissariat of finances.

"By credit notes are understood the State Bank's notes which before the war were redeemable in gold, and which still, when printed by the Bolsheviks, bear the old government undertaking to redeem in gold. Together with these credit notes I count a relatively small number of notes of new design first issued by the Kerensky government in the summer of 1917, though technically these are not credit notes. I omit notes issued for local use by provinces, groups of provinces, or cities, and of course new kinds of currency issued by the German and Ukrainian Governments in former Russian provinces.

"In order to grasp properly the problem of the sum of credit notes in circulation, it is necessary first to understand their kind. Foreigners usually believe that there is a specific Bolshevik money differing from the money issues by the Czars and their successors, the provisional governments of Prince Lvoff and Kerensky. One even hears suggestions that the legal czarist and provisional government notes may be restored to something like their gold parity by means of ignoring or annulling the paper put into circulation by the unconstitutional Bolsheviks. This is a misconception, for practically there is no difference whatever between notes issued by the Czars, by Lvoff and Kerensky (with the exception already referred to) and by the Bolsheviks.

"In circulation to-day are three kinds of central government paper money:

"(1) 'Czar credit notes' (popularly called *tsarskiya dengi*, or Czar money)—that is, notes of prerevolutionary design, printed by the Czars or by the Lvoff-Kerensky provisional governments and later by the Bolsheviks from the old plates or copies thereof. All these are Czar credit notes. The highest denomination is 500 rubles. All are numbered.

"(2) 'Duma credit notes' of entirely different design, printed and issued by the provisional governments, and later printed from the same plates, or from copies thereof, by the Bolsheviks. There is a 1,000-ruble 'Duma note,' also one for 250 rubles. The czarist government did not issue notes of 250 rubles. All Duma notes are numbered.

"(3) Currency notes of much simplified design issued during Kerensky's premiership. Such notes were never printed under the czardom, and I believe the Bolsheviks have not printed them. They are not numbered.

"The value of these credit notes upon the home and foreign markets does not depend at all upon their origin, but solely upon the question, which of the above classes they belong to. The value depends, that is, upon their design. All Czar notes have the same value at home and abroad, irrespective of whether they were printed by the imperial government, by the provisional government, or by the Bolsheviks, and all Duma notes have the same value, irrespective of whether they were printed by the provisional governments or by the Bolsheviks.

"The history is this: After the revolution of March, 1917, when the Czar was deposed, the first provisional government (Prince Lvoff's) was obliged to continue the overthrown imperial government's policy of printing even more and more paper money to cover administration and war expenses. At first these notes were printed from the existing plates, adorned with imperial insignia and portraits. These are Czar notes. Soon after the revolution the government, for sentimental and political reasons, printed notes of new design with vignettes of the Duma Building. These are the Duma notes. Denomination for denomination, these notes were issued as equal in value to Czar notes, the security for their redemption in gold was equally good, or equally bad, and they were accepted willingly.

"But as disillusion with the new order grew, the masses began to show a marked preference for Czar notes, and Duma notes underwent a certain depreciation at home and abroad. As a result, most notes in circulation are to-day Duma notes, while Czar notes are hoarded as fast as they are issued. This obeys the rule, observed all along in Russia, that money considered inferior pushes money considered superior out of circulation. The great objection to issuing local money in Russia in order to relieve the chronic currency famines is that such local money drives Duma notes out of circulation as Duma notes have driven Czar notes, and Czar notes have driven gold coins.

"The Czar notes and Duma notes printed from the old plates by the Bolsheviks bear numbers, but no outsider knows whether these numbers are new or whether they are repetitions of the numbers on notes issued by the former governments. The new notes further bear the facsimile signature of the former director of the Bank of State, though he was dismissed when the Bolshevik seized power, and in this respect one may consider them forgeries. But as no one can distinguish them from Czar notes and Duma notes printed by the former governments, there is no difference in value at home or abroad.

"Russian ruble notes seem to be very plentiful in Europe, but they are not looked upon with favor. The Scandinavian banks will not accept them. And lately a proclamation was issued in England prohibiting the importation of all ruble notes other than those issued by the provisional government of North Russia at Archangel.

SERBIA.

Serbia having been occupied by the enemy during eight months of 1918, information concerning the production of gold and silver during that period is not obtainable. Since the evacuation of the enemy no production has been possible.

Approximate stock of gold and silver on Dec. 31, 1918.

Character of stock.	In Govern- ment treasuries.	In banks.	Held abroad.	In circula- tion.	Total used for monetary purposes.
	<i>Dinars.</i>	<i>Dinars.</i>	<i>Dinars.</i>	<i>Dinars.</i>	<i>Dinars.</i>

Government notes: Austro-Hungarian and Serbian; no reliable estimate.

Notes of issue: No Serbian; no reliable information regarding Austro-Hungarian.

PAPER CURRENCY IN CIRCULATION.

[Charge d'Affaires, Belgrade, Apr. 18, 1919.]

The present currency in circulation consists almost altogether of Austro-Hungarian bank notes, but Serbian Government bank notes are gradually being introduced as well as Serbian silver and nickel currency. The present conditions are most uncertain owing to the fact that the value of the Austrian notes is constantly falling and that thus far no legislation has been made to fix a definite exchange value for these Austrian notes. Their number in actual circulation in Yugo-Slavia is extremely large, but has been determined by no reliable statistics.

LEGISLATION AFFECTING THE CURRENCY.

[Minister of Finance, Belgrade, Apr. 18, 1919.]

The law of September 30, 1916, article 5, provided for the coinage of silver currency to the amount of 30,000,000 dinars, of which total 7,000,000 dinars to be in 50-para pieces, 13,000,000 dinars in 1-dinar pieces, and 10,000,000 dinars in 2-dinar pieces. Of this sum of 30,000,000 dinars, there was coined altogether currency to the amount of 15,000,000 dinars of the same amounts and denominations as provided by the law of December 20, 1914, viz, 3,500,000 dinars in 50-para pieces, 6,500,000 dinars in 1-dinar pieces, 5,000,000 dinars in 2-dinar pieces. The minting was done in France. The minting of the further 15,000,000 dinars has not yet been contracted for.

The law of September 30, 1916, provided also for the minting of 10,000,000 dinars of nickel currency in 20, 10, and 5-para pieces. Of the total amount only 1,750,000 dinars have been coined to date, and this coinage has been made by a firm in the United States of America.

There are in circulation in Serbia 2-para only bronze (copper) pieces, the 10, 5, and 1-para pieces having been withdrawn from circulation long since.

PREMIUM ON GOLD.

THE BANK OF SPAIN IN 1917.

[From Supplement to Commerce Reports, Mar. 3, 1919.]

The year 1917 was one of continued prosperity for the Bank of Spain. The gold reserve increased from \$241,296,120 at the close of 1916 to \$370,117,080 at the close of 1917; the silver reserve fell from \$133,471,440 to \$127,896,840, making a total metallic reserve at the end of 1917 of \$498,013,920.

In March, 1917, the bank was authorized to increase its bank-note issues from \$450,000,000 to \$540,000,000, provided the additional \$90,000,000 should be guaranteed by a gold reserve. At the close of 1917 the value of the notes in circulation was \$504,000,000, compared with \$425,000,000 in 1916. The policy of the Bank of Spain to store its gold in vaults and not put it into circulation during the year was the subject of animated discussion in financial circles.

The metallic guaranty of the paper notes has risen from 89.3 per cent in 1916 to 95.57 per cent, of which 70.23 per cent represents a gold reserve. However, the bank notes can not be exchanged even at the bank for gold, as may be supposed, because gold is not in circulation on account of the fact that the reserve is composed largely of dollars and pounds sterling, and that of Spanish coinage is not sufficient for the demands of circulation.

MONETARY CIRCULATION IN SPAIN.

[Consul General C. B. Hurst, Barcelona, in Commerce Reports, Sept. 26, 1918.]

Up to the present time the Bank of Spain has been able to issue bank notes only to the amount of about \$540,000,000, and the notes in circulation have now almost attained that figure, so that the bank is obliged to make payments in silver. In order to avoid this inconvenience the bank has been authorized to issue notes up to \$630,000,000, provided it has a sufficient gold guaranty for the increase.

On the other hand, the bank will reduce from 2 per cent to 1 per cent the interest on treasury loans, and these loans may be increased from \$13,500,000 to \$27,000,000. The bank will chiefly purchase gold coin susceptible of circulation in Spain.

INCREASED BANK-NOTE ISSUE IN SPAIN.

[Consul General C. B. Hurst, Barcelona, in Commerce Reports, Mar. 6, 1919.]

The development of the banking operations of the Bank of Spain and its natural connection with the requirements of Spanish industry and commerce, both domestic and foreign, has resulted in a circulation of bank notes amounting to 3,316,215,325 pesetas (about \$597,000,000), which is almost the limit of notes authorized by the royal decree of August 6, 1918. In order to avoid any inconvenience to the bank in its operations, an authorization to increase its issue of bank notes was necessary pending the presentation to Cortes of a law regulating the issues of the bank.

Accordingly, a royal decree, published on January 3, authorized the Bank of Spain to increase its bank-note issue by 500,000,000 pesetas (about \$90,000,000), or up to 4,000,000,000 pesetas, instead of the 3,500,000,000 pesetas authorized in August, 1918, on condition that the gold reserves of the bank are in proportion to the increase and that the increase does not disturb the guaranty established by previous legislation. The Bank of Spain may not reduce the gold reserve actually held without the consent of the cabinet or acquire, through the decreed issue, gold that is not in legal circulation without the previous authorization of the minister of the treasury.

MONETARY STOCK.

[From the Bankers' Magazine, New York, May, 1919.]

The bank of Spain has the exclusive privilege of issuing bank notes. It has a paid-in capital of \$30,000,000, a reserve of \$6,000,000, and in January, 1919, had gold on hand to the value of \$445,699,660 and silver to the value of \$127,940,740. Outstanding bank notes amounted to \$675,062,545. As will be seen, the bank had on hand to offset these notes \$573,640,400.

PROPOSED MONETARY REFORM IN SPAIN.

[From Commerce Reports, July 12, 1918.]

The Spanish ministro de hacienda (secretary of the treasury) has introduced into Congress a bill calling for the gold standard and redemption of the foreign indebtedness. The main features of the bill, which is given in full in *España Economica y Financiera*, of Madrid, for May 25, 1918, are as follows:

- (1) If the bill is passed, it is to become effective July 1, 1919.
- (2) The silver coin of 5 pesetas is made legal tender only up to 50 pesetas.
- (3) A mint is to be established at once to coin gold. Until sufficient gold coins have been minted foreign gold coins will be accepted after their value in pesetas has been stamped on them.
- (4) The demonetization and sale of the surplus silver is to proceed with all possible speed after July 1, 1919, when the gold standard will be in full force.
- (5) To defray the expenses of the redemption and sale of the silver money an unlimited credit is authorized from the general State budget; at least 10,000,000 pesetas is to be utilized annually for this purpose.
- (6) The Government is authorized to amortize, wholly or in part, the perpetual external debt. The proceeds of the sale of silver abroad may be applied to the redemption of that portion of the external debt not domiciled in Spain.
- (7) During the period of demonetization of silver, gold coins are not to be minted of a value less than 20 pesetas.
- (8) The 25-peseta notes of the Bank of Spain will be retired from circulation on January 1, 1919.
- (9) The ministro de hacienda is authorized to make the necessary arrangements to carry out this law.

STAMPING OF FOREIGN GOLD COINS.

[Samuel Montagu & Co., London, Aug. 29, 1918.]

In connection with the Spanish gold currency scheme, it is proposed that foreign gold coins should circulate provisionally after being stamped with their Spanish equivalents. This method of providing temporary currency has not been practiced for many years past in Spain or any other country.

COIN REFORM AND MONEY CIRCULATION.

[From the Bankers' Magazine, London, February, 1919.]

On July 10, 1919, writes the Berlin Boursen Courier, the mint law of October 10, 1868, is again to come into force in Spain, according to which only gold is legal tender in that country, and the acceptance of payments in silver in 5-peseta pieces (except through the State bank) is limited. As long as there is not enough minted gold in the country, foreign gold will be circulated, but this has a special impression. It is intended to stabilize the Spanish rate of exchange by utilizing the gold of foreign coins accumulated during the war. On December 31, 1917, the Bank of Spain had a gold stock of 1,967 million pesetas, which was composed as follows:

Items.	Spanish money.	Items.	Foreign money.
	<i>Pesetas.</i>		<i>Pesetas.</i>
Ingots.....	111,198,048	Francs.....	214,474,987
100-peseta pieces.....	13,900,000	Pounds sterling.....	437,578,760
25-peseta pieces.....	208,938,150	Marks.....	450,856
20-peseta pieces.....	145,708,480	Dollars.....	822,524,197
Various.....	9,765,875	Various.....	2,370,357

By impressing the Spanish value on the foreign gold the coin is disvalued for circulation in other countries. By limitation of the silver circulation (all superfluous silver coins are to be withdrawn) the false minting in Spain will be checked. To cope with the scarcity of paper money, the treasurer has granted a further issue of notes of 50 pesetas, but only against complete gold covering.

SWEDEN.

Coinage executed during the year ended Dec. 31, 1918.

Denomination.	Pieces.	Value.	
		Kroner.	U. S. dollars.
Silver:			
1 krona.....	258,091	258,091	69,168

1916.....	183,519,600	49,183,253
1917.....	244,457,300	65,514,556
1918.....	285,722,700	76,573,684

Silver holdings at the end of the years 1914-1918.

Year.	Kroner.	United States dollars.
1914.....	1,888,040	505,995
1915.....	2,134,372	572,012
1916.....	2,338,949	626,838
1917.....	1,600,453	428,921
1918.....	364,632	97,721

Note circulation at the end of the years 1914-1918.

Year.	Kroner.	United States dollars.
1914.....	304,057,600	81,487,437
1915.....	327,885,900	87,873,421
1916.....	417,517,400	111,894,663
1917.....	572,723,000	153,489,764
1918.....	821,619,400	220,193,999

The metallic stock of the Bank of Sweden was during the year 1918 on an average Kr. 259,800,000, against Kr. 205,300,000 during the year 1917, showing thus an increase of Kr. 54,500,000.

A comparison of the gold stocks at the end of the last two years shows the following changes:

Stock.	Dec. 31, 1918.	Dec. 31, 1917.
	<i>Kroner.</i>	<i>Kroner.</i>
Scandinavian gold coin.....	100,079,375	109,669,845
Other gold.....	185,487,016	134,787,429
Total.....	285,566,391	244,457,274

Thus the stock of Scandinavian gold coin at the Bank of Sweden decreased by Kr. 9,600,000, whereas the stock of other gold increased by Kr. 50,700,000. At the end of the two last years the latter item was made up as follows:

Stock.	Dec. 31, 1918.	Dec. 31, 1917.
	<i>Kroner.</i>	<i>Kroner.</i>
Foreign gold coin.....	136,855,948	114,831,263
Gold in planchets.....	48,604,773	19,929,630
Underweight foreign coin, together with carolins and ducats.....	26,296	26,536
Total.....	185,487,017	134,787,429

Comparative financial situation of the Bank of Sweden.

Note circulation.....	304,057,553	327,885,943	417,517,403	572,722,994

SWITZERLAND.

There was no gold or silver coinage executed at the federal mint during the year ended December 31, 1918.

It is not possible to make an approximate estimate of the amount of gold and silver coin withdrawn from monetary use by private individuals during the year 1918. It is probable, of course, that gold coins have been melted for industrial purposes, but such a practice can not have been extensive during the war, as most of the gold coin has been held in banks, notably in the Swiss National Bank, as metallic cover for the bank notes in circulation.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1918, was: Gold, 11,000 kilograms fine (353,650 fine ounces, \$7,310,594); silver, 47,000 kilograms (1,511,050 fine ounces).

The federal mint as a rule uses for its coinage only gold or silver bullion, or domestic coin withdrawn from circulation. To date the Government has abstained from melting foreign coin for recoinage purposes.

Approximate stock of gold and silver, also paper money, used for monetary purposes on December 31, 1918.

Fractional silver coin to the amount of 46,300 francs (\$8,936) was withdrawn from monetary use during the year ended December 31, 1918.

During the year 1918 there were withdrawn from circulation in Switzerland fractional silver coins with the head of Napoleon III to the amount of 1,850,000 francs (\$357,050), and returned to France.

The proportion of the metallic cover to the note circulation was 48.48 per cent in 1918, against 58.30 per cent in 1917.

The Swiss National Bank issued during the year 1918 338,500,000 francs' worth of notes; did not present any to the treasury for redemption.

Comparative statement of the Swiss National Bank.

[From Federal Reserve Bulletin, June, 1919.]

[Monthly average in millions of francs.]

Notes in circulation.....	274	420	430	490	645	924

When the war broke out, the Swiss National Bank chose the course pursued by all other European banks of issue, namely, took measures to gain and maintain control of as large a gold reserve as possible. To achieve this end the bank obtained legislation making its notes legal tender, and issued money in smaller denominations (5 to 25 francs) than had been the practice before the war, when 50 francs was the lowest denomination of the bank note. A law prohibiting the export of gold was also passed.

In August, 1914, the great demand for paper money in small denominations for purposes of trade, in view of the tendency to hoard gold and silver, made it necessary for the treasury to issue its own obligations, these notes being guaranteed by the National Bank and treated as part of its own circulation. Nearly all of these notes were soon retired. A steady growth of the gold reserve throughout the war period is indicated by the bank's average monthly figures, while the silver reserve shows a decline, followed by a quick recovery and further growth, due in part to the importation of French 5-franc pieces, which are legal tender in Switzerland.

SPECULATION IN PRECIOUS METALS PROHIBITED.

[From Bulletin de Statistique, Paris, January, 1919.]

An order of the Federal Council, July 9, 1918, prohibits dealing at a premium, without special authority from the ministry of finance, in any gold coins, as well as in current silver coins of the Latin Union and fractional silver coins issued by Switzerland, Belgium, and France.

GOVERNMENT CONTROLS PRECIOUS METALS.

[From Bulletin de Statistique, Paris, January, 1919.]

By order of the Federal Council, August 26, 1918, the Government took an inventory of all gold, silver, and platinum bullion then on hand in the industrial establishments of the Republic and assumed control thereof.

FINANCIAL SITUATION—INCREASED CURRENCY CIRCULATION.

[Consul Philip Holland, Berne, in Commerce Reports, Apr. 4, 1919.]

Switzerland is the wealthiest country per capita in the world. In 1913 the Swiss per capita wealth was 10,500 francs (\$2,026); in England only 8,000 francs (\$1,544). The aggregate national wealth may be safely estimated as about 40,000,000,000 francs.

At the head of the Swiss banking system stands the National Bank, the sole institution authorized to issue Federal bank notes. In 1913 the average circulation of bank notes amounted to 272,000,000, of which 71 per cent was covered by precious metal. In 1917 it increased rapidly, and late in 1918, 1,000,000,000 francs in bank notes were current, of which only 46 per cent was covered by precious metal. This strong increase in paper currency was brought about by the steady rise in the general cost of living and by the large credits which Switzerland was forced to grant to the various belligerents as compensations in the different commercial agreements during the war. These credits amount to about 300,000,000 francs (\$57,900,000) to the Entente and 280,000,000 francs (\$54,040,000) to Germany.

TURKEY.

FIDUCIARY NOTE CIRCULATION.

[From l'Economiste Européen, Paris, Feb. 21, 1919.]

We have received from Mr. P. Naville, the administrator of the Imperial Ottoman Bank, the following interesting communication regarding the fiduciary circulation of Turkey:

The treasury notes or paper money now in circulation in Turkey, with unlimited legal currency, is in round numbers 160,000,000 Turkish pounds (\$703,530,000). If we deduct the amount declared covered by gold held in the Berlin vaults, pertaining to the debt, 5,000,000 Turkish pounds (\$21,982,500), we still have 155,000,000 Turkish pounds (\$681,457,500) with no other cover than German treasury notes entered also in the name of the Ottoman public debt, which notes by no means guarantee the redemption of the Turkish notes.

The Turkish Government during the war has thrown money wholesale (à la Bolshéviki). Its only care has been to issue all the notes which its ally, the German Government, consented to guarantee by depositing other notes, this time German, but not less doubtful than the Turkish fiduciary notes which are claimed to be covered. As a consequence thereof the Turkish paper money is now worth only 20 per cent of its face value, having depreciated 80 per cent, and may depreciate even more.

ISSUE OF PAPER CURRENCY.

[From l'Economiste Européen, Paris, May 30, 1919, p. 340.]

During the war Turkey issued 155 millions of Turkish pounds (\$681,457,500) of paper money. There was created a reserve of 5½ millions of Turkish pounds (\$24,180,750) to pay the coupons overdue, but this reserve consists of paper piasters in Constantinople and paper marks in Germany.

ASIA.

ARABIA—ADEN.

The silver coin withdrawn from monetary use during the year ended December 31, 1917, amounted to Rs. 1,777 (\$576).

The needs of Aden during the year 1917 were met from the general coinage of the Indian mints.

¹ Includes Rs. 107,701,057 (\$34,938,223) held in currency offices and chests as part of the paper currency reserve.

² Held in currency offices and chests as part of the paper currency reserve.

³ Includes Rs. 105,628,434 (\$34,265,864) held in currency offices and chests as part of the paper currency reserve.

⁴ Held at head office of the presidency banks of Calcutta, Bombay, and Madras. Figures for branches of the presidency banks as also those for other banks are not available.

⁵ The Government of India does not possess accurate information about the amount of gold and silver in circulation in India.

PREMIUM ON GOLD FOR 1918.

No quotations for the premium on the sovereign are available since August 22, 1918, when the dealing in this coin above its legal tender value was prohibited. There is, however, a considerable premium on gold bullion as compared with the ratio of Rs. 15 to the sovereign containing 112.989 grains troy fine gold.

Legally the gold sovereign and the silver rupee and half rupee are unlimited legal tender at the ratio of Rs. 15=£1. Moreover facilities for the exchange of sovereigns for rupees, though not imposed legally, were provided by the Government, and to a certain extent there was before the war in certain parts of India a not inconsiderable circulation of sovereigns as currency. On the outbreak of war, however, the Government withdrew the facilities previously afforded by them for the issue of gold at their treasuries and currency offices in exchange for silver or notes, though there have been occasions, since the formal withdrawal of these facilities, when the Government has for special reasons occasionally released gold sovereigns and gold mohurs.

To the withdrawal of these facilities for obtaining sovereigns at treasuries must to some extent be ascribed the premium to which the sovereign has gone since 1915, but a more potent factor responsible for the later and the more appreciable premium which has appeared on gold is to be found in the restrictions on the movement of gold into India which have been imposed by the administrations of foreign countries and the Government of India.

LAWS AFFECTING THE CURRENCY.

By the Indian paper currency act of March, 1918, the words "four hundred and twenty millions," in the currency act of 1917, shall henceforth read, "six hundred and sixty millions."

¹ Including paper currency reserve.

² No accurate information is available as to the amount of gold and silver in circulation.

NOTE.—The metallic currency in use is the silver rupee. Before the war a considerable quantity of gold also passed into circulation in some parts of the country in the form of sovereigns. These circulated at their legal tender rate of Rs. 15=1 sovereign, but subsequently, owing to special war conditions, issues of gold from Government treasuries and currency offices were restricted, and gold began to command a premium, which at one time was as high as 33 per cent.

PREMIUM ON GOLD FOR 1917.

Highest premium, 2 rupees 7 annas per sovereign; lowest premium, 3 annas 3 pies; average premium 1 rupee 6 pies.

LAWS AFFECTING THE CURRENCY.

By the gold coinage act of September, 1918, a gold mohur (equal to a pound sterling) or 15-rupee piece was ordered struck. The standard weight of the said gold mohur shall be 123.27447 grains troy. Its standard fineness shall be eleven-twelfths fine gold. The tolerance shall not exceed one-fifth of a grain in weight and two-thousandths in fineness. The gold mohur shall be a legal tender at the rate of 15 rupees for one gold mohur. In all other particulars the India coinage act of 1906 shall apply. The present gold coinage act shall remain in force for the duration of the present war and for a period of six months thereafter.

By the Indian coinage act of March, 1918, the words "and (d) an eighth of a rupee, or 2-anna piece" (referring to the eighth-rupee silver piece) of section 4, Act III of 1906, shall be omitted. The same act also authorizes the issue of a 2-anna nickel piece, the weight of which shall be 90 grains troy. The said 2-anna nickel piece shall be a legal tender to the amount not exceeding 1 rupee at the rate of 8 for a rupee.

By the bronze coin (legal tender) act of September, 1918, certain bronze coins, namely, pice, half-pice, and pie pieces, coined outside British India, were declared legal tender to the amount not exceeding 1 rupee, at the rate of 64, 128, and 192, respectively.

An Indian paper currency ordinance, of April 15, 1918, provides that silver coin and bullion held in the United States of America, for India or in course of transmission thereto, shall be deemed a part of the Indian paper currency reserve.

PRODUCTION OF GOLD.

[By Consul Lucien Memminger, in Supplement to Commerce Reports, May 12, 1919.]

The total yield of the four gold mines in operation in the Anantapur gold field in the calendar year 1917 was 20,529 ounces, valued at \$423,706. The only gold mine in Hyderabad produced 13,466 ounces of bullion, valued at \$250,834. Five mines in the Kolar gold field in Mysore produced 491,246 ounces of gold, valued at \$10,137,117.

IMPORTS AND EXPORTS OF GOLD INTO AND FROM INDIA.

[From the bullion letter of Samuel Montagu & Co., London, July 17, 1919.]

Below will be found statistics with regard to India as to the entry and exit of gold during the half century ending with the financial year 1913-14, calculated as a quinquennial average.

Period.	Imports.	Exports.	Net imports.
	<i>Pounds sterling.</i>	<i>Pounds sterling.</i>	<i>Pounds sterling.</i>
1864-65 to 1868-69.....	6,038,000	314,000	5,724,000
1869-70 to 1873-74.....	3,107,000	179,000	2,928,000
1874-75 to 1878-79.....	1,482,000	888,000	594,000
1879-80 to 1883-84.....	3,477,000	83,000	2,394,000
1884-85 to 1888-89.....	2,537,000	239,000	2,298,000
1889-90 to 1893-94.....	2,936,000	1,374,000	1,562,000
1894-95 to 1898-99.....	3,404,000	1,894,000	1,510,000
1899-1900 to 1903-4.....	8,666,000	4,544,000	4,122,000
1904-5 to 1908-9.....	11,233,000	5,002,000	6,231,000
1909-10 to 1913-14.....	21,858,000	3,092,000	18,766,000

The total absorption for the above-mentioned 50 years amounts to the large aggregate of £230,645,000. As the production of the world during the 50 calendar years ending 1913 amounted to £2,125,750,000, India absorbed over 11 per cent of this total. Although the absorption during the last quinquennial period is more than three times that during the first mentioned, it represents an almost similar percentage of the world's production during these five years. This coincidence is remarkable, considering that conditions were quite different; for, during the former period, India possessed a free silver mint, whilst, during the latter, the mint was closed to free silver coinage, and, though British sovereigns were legal tender, they could be melted without illegality. The fact indicates that India's demand for gold is for the metal itself, rather than for its use as a medium of currency.

GOLD REFINERY FOR INDIA.

[Consul Lucien Memminger, Madras, Feb. 22, 1918, in Commerce Reports.]

Although about 600,000 ounces of gold are produced yearly in India, of which about 90 per cent comes from Mysore, practically the whole of it before the war was shipped direct to Europe to be refined. The Calcutta correspondent of the Madras Mail, in a dispatch reporting a meeting of the Mining and Geological Institute of India in that city on February 18, 1918, states that a refinery is now to be erected in this country for the refining of gold produced from the Indian mines.

SILVER PURCHASES.

[From the Statist, London, Mar. 1, 1919.]

The report of the Indian currency department for 1917-18 discloses the fact that the rupee coinage of the year was 23.12 lacs, and purchase of silver for this coinage amounted to 83½ million standard ounces, supplemented by local purchases in Calcutta and Bombay of 3½ million standard ounces. There were purchased in America 40 million, in China 28½ million, and in Australia 5 million ounces, while 1½ million ounces were obtained from the Bawdwin mines. The balance was shipped from London.

NOTE.—1 lac=100,000 rupees.

IMPORTS OF GOLD INTO INDIA.

[From the bullion letter of Samuel Montagu & Co., London, Apr. 24, 1919.]

The net imports of gold into India on private account amounted in 1917-18 to £13,000,000, as against £9,000,000 in 1916-17, and £19,000,000 the prewar average. These figures take into account imports and exports of gold bullion into and from Bombay on behalf of the Bank of England, movements which, however, have no relation to India's balance of trade, inasmuch as the gold is not moved in settlement of this balance, but is imported, refined, and warehoused in Bombay on behalf of the bank alone. The net imports on Government account in 1917-18 were valued at £3,493,000 as against a net export of £27,000 in the previous year and of £477,000, the prewar average, and consisted mainly of sovereigns. The absorption of gold coin and bullion

was £10,221,000. During the last quinquennium, commencing 1913-14, India has absorbed gold worth not less than £54,000,000, or over one-half of the world's annual production.

ABNORMAL ABSORPTION OF RUPEES.

[From the bullion letter of Samuel Montagu & Co., London, Jan. 18, 1917.]

Under date of December 23 last, the Times of India states as follows:

"The absorption of nearly 400,000,000 rupees in a space of about 12 months (of which about 100,000,000 are estimated to have gone to Mesopotamia and East Africa) is without precedent in the financial history of India and is mainly due to trade conditions which have prevailed since the middle of 1915. The people of India have been paid in crores, for which produce has been going up by leaps and bounds in value, and they retain these crores because they have not been able to freely buy imported articles like piecegoods, iron and copper goods, bar silver and gold."

NOTE.—1 crore=100 lacs; 1 lac=100,000 rupees; 1 rupee=\$0.3244.

MONETARY SITUATION.

[From Supplement to Commerce Reports, Jan. 14, 1919.]

Money was scarce during 1917, and the bank rate was in excess of 6 per cent during the greater part of the time under review. The campaigns in Mesopotamia and East Africa were responsible for heavy drains on the metallic currency supply. The first Indian War Loan of 100,000,000 pounds sterling (\$486,650,000) further accentuated the shortage; and the prosperity of the agricultural classes led to greater hoarding. Matters became so acute that the Government issued notes of two new denominations—1 rupee (\$0.324) and 2 rupees 8 annas (\$0.811)—and in the latter part of September began, as an additional means of conserving the monetary supplies of the country, the sale of council bills at 1 shilling and 5 pence to the rupee, thus establishing an arbitrary tax of roughly \$0.02 on each rupee for all exchange operations.

BOMBAY TO HAVE BRANCH MINT.

[British (Government) Board of Trade Journal, Jan. 3, in Commerce Reports Jan. 25, 1918.]

The heavy and continuous demand by the United Kingdom and the Allies for British Indian products has caused an unprecedented expansion in the normally favorable trade balance of India. During the past six months remittances in liquidation of this balance have been partly made by the shipment from debtor countries

of gold coin and bullion. The gold held in the paper currency reserve in India rose from £6,623,000 (\$32,230,800) on May 31 to £17,069,000 (\$83,066,300) on December 15. In order that all the gold so imported may be available to maintain the metallic portion of the government of India's paper currency reserve held for the encashment of currency notes, it was notified on June 29 that all gold so imported into India on private account would be subject to license and would be acquired by the government of India at the rate of 15 rupees to the pound sterling, or 1 rupee=7.53344 grains troy of fine gold. On September 26 this rate was altered to 14½ rupees to the pound sterling, or 1 rupee=7.79321 grains troy of fine gold.

The British sovereign is legal tender in India, and sovereigns imported and sold to the government are therefore immediately available for all purposes; but the active trade demand for coin to finance heavy movements of exports and the requirements of the government to make disbursements to troops impose a considerable strain on the government of India's metallic resources and make it desirable to hold the gold (no less than the silver) in the metallic portion of the paper currency reserve as far as possible in the form of legal-tender coin. Since the beginning of the war the government of India's currency note circulation has expanded from 754,400,000 rupees to 1,108,300,000 rupees. It has therefore been decided to provide facilities for coining into sovereigns the gold bullion and foreign coin coming into the paper currency reserve. The establishment of a branch of the royal mint at Bombay was accordingly authorized by proclamation dated December 21, to take effect from the date of promulgation in India.

PREMIUM ON GOLD COINS PROHIBITED.

[From bullion letter of Samuel Montagu & Co., London, Aug. 29, 1918.]

The Times correspondent cables from Bombay on August 24, 1918, to the following effect:

"The government have issued a rule under the defense act prohibiting dealings in current coins at a premium. The face value of the sovereigns for the purposes of the rule is deemed Rs. 15. The government state that, with the object of assisting the currency position, they have been issuing sovereigns and mohurs for the purchase of wheat, but this object has been frustrated by the withholding of coins from circulation in the expectation of speculative profit. (The Bombay mint began the coinage of sovereigns on Aug. 16.)"

GOLD STATUS OF THE RUPEE.

[From the bullion letter of Samuel Montagu & Co., London, Aug. 29, 1918.]

The rupee, hitherto only coined in silver, has acquired a definite gold status, now that a gold mohur, bearing an inscribed designation of 15 rupees, is minted in India. The gold contents of a rupee may, therefore, be taken as 7.53344 grains.

THE FINANCIAL SITUATION.

[From the Bankers' Magazine, London, October, 1918.]

In India the coining of gold pieces of the face value of 15 rupees (R1=\$0.324) commenced at the Bombay mint on August 16, and the rupee notes continue to go rapidly into circulation. Thanks to the large amount of silver obtained from America, silver has replaced to a considerable extent the gold which has been lost by the currency department, but it has been necessary to augment, for the fifth time during the war, the amount of the fiduciary issue. By the end of March the limit of 62 crores (10 crores in rupee securities and 52 crores in sterling securities) had been reached, and by act of March 12 an increase of 24 crores to 86 crores was authorized, and this limit has now (September, 1918) been reached. The following three returns of the currency department show the growth of the note circulation this year, how it is covered, and the position of the silver reserve before it was replenished by imports from America:

Items.	Note circulation.	Silver.	Gold.	Securities.	
				Indian.	Sterling.
December 31..... 1917.	Lacs. 10,831	Lacs. 1,905	Lacs. 2,778	Lacs. 1,000	Lacs. 5,148
April 7..... 1918.	9,745	1,044	2,553	1,000	5,148
September 15.....	13,416	2,771	2,046	1,000	7,599

NOTE.—1 crore=100 lacs; 1 lac=100,000.

GOLD MOHURS ABSORBED.

Samuel Montagu & Co., London, March 27, 1919, reports that the 1918 issue of gold mohurs, especially coined to finance the crops of the Punjab, has practically disappeared from circulation.

HOARDING IN THE PUNJAB.

[From the Statist, London, May 3, 1919.]

One of the most serious features of the unrest in India, which existed during a long period of the war and which culminated in the regrettable incidents in the Punjab and elsewhere, is the recurrence of hoarding specie upon an immense scale on the part of the Indian population. It will be remembered, as was stated some time ago, that nearly 400,000,000 ounces of silver were obtained from the United States and imported into India, and that a large part of this immense quantity has absolutely disappeared from circulation, although immense quantities of silver were coined into rupees. So abnormal is the demand for silver in India that it is now announced that the United States are about to send to India a further large consignment estimated in some quarters as high as 200,000,000 ounces. It is evident that, apart from the wastefulness of the process, if the Indian population continues to hoard silver to the extent that they have been doing during the war and also during the armistice, there will be a very serious shortage of the metal for the requirements of the rest of the world.

PRECIOUS METALS IN BURMA.

[Consul Lawrence P. Briggs, Rangoon, Burma, in Commerce Reports, Nov. 19, 1918.]

Silver, the one important precious metal found in Burma, is obtained only from the Namtu mines. Small amounts of gold and platinum are produced in Upper Burma, principally by the Burma Gold Dredging Co. from the gravels of the Irrawaddy River in Myitkyina district, about 350 miles above Mandalay. The amount is steadily decreasing, and this firm seems to be on the point of dissolution. The total production of Burma for the past three years was, respectively, 3,183, 1,983, and 1,079 ounces of gold; and 18, 9, and 4 ounces of platinum.

All of the silver, iron, and zinc ores, and nearly all of the lead ore produced in Burma come from the Bawdwin mines, located at Namtu in the northern Shan States, and operated by the Burma Mines (Ltd.). This company is said to be backed by American capital, is equipped with American machinery, and employs 30 or 40 American engineers and miners. The principal ore is argentiferous lead, with which zinc and copper are also associated. The silver and lead are obtained from (a) crude ore from the mine, (b) lead slag from the old Chinese silver mine, and (c) gossan flux.

CEYLON—COLOMBO.

Approximate stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1918.

Character of stock.	In Govern- ment treasuries.	Held abroad.	In circulation.	Total used for monetary purposes.

CHINA.

CURRENCY CONDITION.

[From the Journal of Commerce, New York, Apr. 21, 1919.]

The ramification of Chinese currency is a very difficult matter to explain, and to be thoroughly understood must be carefully studied. The following quotation from a writer in the trade supplement of the London Times is in brief as near a satisfactory explanation of the subject as can be given:

"China is the only purely silver-using country in the world. The mysteries and chaotic complication of her monetary system have baffled many students, but it is sufficient to explain that the present unit of the currency is the tael. Unfortunately there is a bewildering variety of taels, which nominally are supposed to represent an ounce of pure silver. There are no tael coins at all, the tael being merely a measure of weight and also of value, which, however, differ in various parts of the country. It has been computed that there are no fewer than 77 different taels, or measures, in existence in China, but there are only four principal taels. The chief of these is the Haikwan tael, in which all duties levied by the Imperial Maritime Customs are calculated. It is supposed to contain 583.3 grains of silver. The Kuping tael is also an important unit, for practically all Government dues, other than customs dues, are calculated in these taels."

The constant rise and fall in exchange in China has a most deterring effect on general business transactions in this country, for a merchant is never quite certain what will be the sterling value of his stock or debts or securities at any given date in the future; all depends upon the price of silver at the time. The market is therefore always more or less speculative and uncertain, with heavy buying at times to take advantage of favorable exchange and depleted stocks at other times when low exchange adds to their cost. This situation has existed in China since the beginning of its trade with foreign countries, and there are no signs of any immediate change likely to take place.

At present the above is all that can be said upon this important question. There is a strong probability that within the near future—but how soon no one can say—the Chinese Government will make an attempt to establish some standard for its currency. It is probable that this may be a silver standard, which, although much less desirable than gold, is infinitely better than no standard at all, as is the case at present. It is understood that the Chinese Government has called to its assistance in this matter Baron Sakatani, the Japanese expert, as financial adviser, with the object of formulating some scheme leading to a fixation of the currency of the country.

EXCHANGE WITHIN THE COUNTRY.

The question of exchange within the country does not present the same difficulties, for it is a simple matter to calculate the difference in the respective values of the tael between the different ports. Thus a shipment of goods sent from Shanghai to Tientsin and billed in Shanghai taels may be paid in Tientsin taels, more or less, sufficient to meet the bill, and a native bank draft forwarded to the shippers and drawn upon Shanghai in Shanghai taels. Banking in China is a very ancient institution; the Chinese are said to have had a paper currency as early as 800 A. D. Banks are to be found in every city or town of any importance throughout the country. They are all more or less private concerns, and no one can tell anything about their resources or solidity. There is no inspection and no check upon their transactions.

Many of the purely native banks belong to families and have no note circulation, but deal in Chinese commercial paper and exchange and lend money at very high rates of interest. One per cent per month is not considered a high rate of pay on borrowed funds in China. In addition to these native banks there are a number of so-called Chinese chartered banks, under charter from the Central Government or from a provincial government. Such banks are permitted to issue notes; they are to be found only in Shanghai and a few of the large cities, but they have no inspection or any Government reserve; they frequently fail or go out of business, and their notes are often at a discount. The circulating medium in China are notes of the numerous foreign banks doing business in the different ports, in Mexican dollars, the notes of some of the Chinese banks, and silver dollars, Mexican and Chinese; subsidiary coins of 20 cents and 10 cents, and copper cents of Mexican value.

The principal countries from which China receives its foreign imports are Great Britain, the United States, Japan, and formerly Germany.

SHORTAGE OF SILVER IN CHINA.

[Consul General George E. Anderson, Hongkong, in Commerce Reports, Feb. 20, 1919.]

The shortage of silver is adversely affecting the general trade situation all over China, but its effects are much more serious in some portions of the country than in others. In the interior districts of North and Central China comparatively good crops and general financial conditions have made the demand for the metal increasingly acute. In South China, particularly the districts subsidiary to Hongkong, the demand is felt much less commercially, for despite the fact that the export of silver from Hongkong except for Government account—even for the protection of Hongkong bank notes—is prohibited the Hongkong bank-note issues are always fully protected under the laws of the colony and by the banking policy of the institutions issuing them.

At times during the past year Hongkong bank notes have circulated at a discount because they could be redeemed in silver only in Hongkong, whence no silver could be exported, whereas when native bank notes were at par they represented silver obtainable on demand, at least theoretically. But with the uncertainty of finances in China generally this condition continued for a short time only. Owing to the increasing discount of Canton notes silver could only be had in small amounts, causing a considerable appreciation in the value of subsidiary coins, and transactions, especially in import and export lines, could be counted upon safely only in Hongkong bank notes. In some districts in South China the need of silver has been very acute—for example, in the Kotchiu tin mines, where silver for the payment of expenses could only be had from Shanghai at times, and then only on the payment of a considerable premium.

In the districts near the Indo-Chinese border there has been continued trouble, due largely to the drain on the stocks of silver in those districts for the benefit of Indo-China. In a general way inter-city trade in the interior has been greatly retarded by a lack of silver, and this has borne particularly heavily upon districts where it was necessary to have silver at any price. The result has been an inflated value of the Shanghai and North China dollars compared with Hongkong dollars, exchange in favor of Shanghai most of the time running about 12½ per cent, while the actual difference in the value of the respective dollars is about seven-tenths of 1 per cent.

The respective stocks of silver in Shanghai and North and Central China, on the one hand, and in Hongkong territory, on the other, are rather significant. Both parts of the country are short of the white metal, but with varying results. Shanghai stocks of silver are placed by good authority at about 18,000,000 taels instead of 30,000,000 taels, which is usually considered necessary for the trade of the port. About 2,000,000 taels is soon to arrive, but shipments of silver to Shanghai, which now practically depends upon the United States for the supply, have been so restricted that the usual drain into the interior has left the port almost without resources. Much of this embarrassment has been due to the fact that Chinese speculators have bought gold at high silver exchange and in spite of export restrictions the ordinary supply of silver has gone out to cover the gold exchanges purchased.

Shanghai ordinarily requires much more silver than Hongkong and South China in proportion to actual business transacted because of the large number of banks which issue notes or otherwise require specie reserves. In short, the demand for silver in Shanghai and its commercial territory is pressing. Considerable amounts of silver have been going into the interior, where they are more or less permanently absorbed.

The close of the current calendar and Chinese year will be an anxious time as a result of the overpurchase of gold and the small stocks of specie. When the usual midwinter demand for silver comes the situation will probably be more acute. At all events the situation in Central and North China is such that trade is greatly hampered by a lack of money and, of course, a lack of full and proper credit system based upon money.

The silver shortage in Hongkong is similar to that in Shanghai in some respects, but because of the sound banking system established under Hongkong legislation the effects are different. Hongkong probably has \$15,500,000 less silver at the present time than at the beginning of the current year, despite the prohibition of exports. Of this difference, about \$2,000,000 is the estimated amount of silver smuggled out of the colony.

Some fair-sized shipments of silver have been received by Hongkong banks recently and about 2,000,000 ounces are now on their way. It is generally anticipated, therefore, that whatever change there may be in the Hongkong and South China situation will be for the better, although at the present time it is not unsatisfactory in view of

general silver and financial conditions all over the world. The exchange rate of the Hongkong dollar at the present time is considerably below that of the Shanghai or North China dollar, but it is nearer actual parity with silver and is, therefore, much sounder. There is every reason to anticipate that conditions in South China will improve, but high exchange is likely to continue to affect the general import and export trade indefinitely.

GOLD STANDARD.

[From *L'Economiste Européen*, Aug. 23, 1918, p. 127.]

Peking reports that a presidential decree has authorized the exchange bureau to issue gold notes with a view to facilitating international commerce and to paving the road for the adoption of a gold standard monetary system.

The exchange bureau will have to appoint one or more banks to issue these gold notes, which, until coins can be struck, can be used to make payments in foreign countries through the agency of banks designated for the purpose, and these notes shall be exchangeable for coins as soon as the coins are available.

The banks thus designated must have a gold reserve either in national gold dollars or in subsidiary coins, or in foreign coins deposited in the exchange offices as well as in the commercial ports of China and foreign ports.

These measures are taken with the object of paving the road for the absorption of a loan of yen 80,000,000 in gold agreed to by Japan, which amount will be held in Japan as reserve for the issue in China of yen 240,000,000 of inconvertible gold notes, before gold standard coins can be struck. Foreign authorities reserve their opinion until more amply informed.

CHINESE GOLD CURRENCY ISSUE.

[The Commercial and Financial Chronicle, Nov. 23, 1918.]

With regard to the proposed issuance of gold notes by China, the New York Times of October 29 said:

"With a view to facilitating foreign trade, the Peking Government has recently promulgated by a presidential mandate, the gold note regulations and the convertible note regulations, to be put in force on the day of their issue. According to these regulations, China has authorized certain banks to be named by the Government to issue gold notes.

"Until gold coin is ready, the note will be used only for domestic circulation and for drawing a bill of exchange, and the note will not be convertible until then. Gold equivalent to the amount of the note issued will be reserved and the standing amount will be announced every 10 days."

ISSUE OF COPPER NOTES—MONETARY CONDITIONS.

[By Singloh Hsu, Secretary, Ministry of Finance, Peking, in the Bankers Magazine, New York, February, 1919.]

It is said that the restoration minister of finance caused a fresh issue of copper notes to the value of \$2,200,000, which had to be recalled in order to prevent a precipitate fall in the value of such notes.

Monetary conditions in China are chaotic. The silver tael, fictitious in places and real in others, varies in different localities. Thus one Haikwan tael equals one and a half Tientsin tael, but 1.114 Shanghai taels. Silver dollars of various origins circulate together, exchangeable according to their contents of fine silver. Thus we have not only silver dollars coined in different mints at different periods, but also foreign dollars, such as the Straits dollar, Spanish Carolus dollar, and the Mexican dollar. Our monetary system has adopted the silver standard, as provided by the currency law of 1914, but the de facto standard is still copper. Paper money is in a still worse condition. The notes of the Bank of China and of Communications do not circulate at par in Peking, while notes issued by some provincial banks are depreciated as much as 70 per cent.

SILVER VALUE IN CHINA.

[Consul General Thomas Sammons, Shanghai, May 7, in Supplement to Commerce Reports, Aug. 6, 1918.]

The average value of the Haikwan tael in 1915 was \$0.612; in 1916 the average value advanced to \$0.8283, an increase of 35 per cent. The year 1917 showed a still further advance to \$1.02, an increase of 23 per cent over 1916 and of 66 per cent over

1915. Compared with the normal value of the Haikwan tael, which is generally reckoned at \$0.72, the present gold valuation is about 42 per cent above normal.

CHANGSHA.

IMPORTS AND EXPORTS OF SILVER IN 1917.

[Consul Nelson T. Johnson, Changsha, in Supplement to Commerce Reports, Dec. 9, 1918.]

During the year 1917 treasure was imported into Changsha in the shape of silver bars and sycee to the value of \$222,564, and silver coins to the value of \$938,469, a total of \$1,161,033. Exports consisted of silver bars and sycee, \$252,623; silver coin, \$1,688,821; and copper coins, \$27,201; a total of \$1,968,645.

CHUNGKING.

FINANCIAL CONDITIONS.

[Consul George C. Hanson, in Supplement to Commerce Reports, Nov. 16, 1918.]

At the end of the year financial conditions in Chungking and other cities of the Province were far from satisfactory. Business, which promised so well in the spring, had gradually become worse. Large commercial centers, such as Luchow, Suifu, and Tzeliuching, fell into the hands of first one contending faction and then another. The merchants of these places were called upon to advance funds to support the victorious soldiers. Although the northern troops brought a considerable quantity of silver with them into Chungking, it was not sufficient to check the gradual tightening of the money market, so that when the year closed the interest rate, instead of being the normal average of $1\frac{1}{2}$ per cent per month, was as high as 2 per cent per month. The banks profited by this, but not the merchants, who were carrying stocks that they could not move down river or into the interior, and who were forced to extend their loans at high interest rates. At the annual settling time in China the banks agreed to give merchants in straitened circumstances two months of grace within which to meet their obligations in order to prevent them from failing.

The value of the notes of the Bank of China and the Bank of Communications remained below par throughout the year. Attempts were made both at Chengtu and Chungking to secure foreign loans, for the service of which certain provincial revenues were offered, to be used in redeeming these notes. Owing to the unsettled political conditions prevailing in the Province and to the demand for foreign capital in Europe and the United States, these attempts failed. It is feared that unless some radical measure is adopted to restore confidence in these paper issues their values will continue to fall and Szechwan trade will be still more adversely affected thereby.

The import and export business of Chungking is largely done through Shanghai, and the exchange between these two ports plays an important part in the trade. At the beginning of the year, when trade was good, the local tael was about on a par with the Shanghai tael, but at the end of the year it was at a premium. Local merchants did not care to purchase goods at Shanghai, and so were not interested in purchasing drafts drawn here on Shanghai. The inability of the merchants to secure silver from Shanghai and the heavy demands made upon the stock of silver here for military uses created a scarcity and a corresponding increase in the value of the local tael.

HANKOW.

EXPORT TRADE OF HANKOW.

[By Consul General Edwin S. Cunningham, in Supplement to Commerce Reports, Dec. 9, 1918.]

There have been many difficulties to export trade, as the scarcity of silver at treaty ports was accentuated by a shortage of copper in the interior. Copper is really the only medium of exchange for all the interior of China. The shortage of silver in the towns is serious, but it is of very minor importance compared with the copper shortage which affects every one in the producing section. The compensating condition was the scarcity of practically every article produced, brought about by an unusual demand and by the reduction of supplies due to the world war.

IMPORTS AND EXPORTS OF TREASURE AND COIN.

[By Consul General Edwin S. Cunningham, in Supplement to Commerce Reports, Dec. 9, 1918.]

Statistics show that treasure was imported into Hankow only from Chinese ports in 1917, and but \$29,376 worth of silver was exported to foreign countries. The imports and exports of silver were about half as large as in 1916; gold was imported and exported in small quantities, whereas none was moved in 1916; a slightly increased import of copper noted.

The following table gives the imports and exports of gold, silver, and copper for 1916 and 1917:

Items.	Gold.	Silver.	Copper.	Total.
Imports from Chinese sources:				
1916.....		\$13,980,423	\$1,126,254	\$15,106,677
1917.....	\$21,307	6,770,395	1,330,085	8,121,787
Exports to foreign countries in 1917.....		29,376		29,376
Exports to all China:				
1916.....		8,503,476	92,871	8,596,347
1917.....	47,020	5,779,523	52,479	5,879,022

During 1917 the imports of coins into Hankow were valued at \$5,516,489, against \$8,200,762 in the preceding year, while the exports of coins amounted to \$4,544,716, against \$6,704,305 in 1916.

HONGKONG.

FINANCIAL AND INDUSTRIAL CONDITIONS.

[Consul General George E. Anderson, Hongkong, Dec. 31, 1918, in Commerce Reports, Mar. 29, 1919.]

The financial situation in the latter days of 1918 was so well controlled by the Government that in spite of the fact that the exports of silver from the Colony during the first 10 months of the year amounted to \$23,602,226 Hongkong currency, while the imports amounted to only \$10,898,391, there has been no change in the general position of the Colony as regards exchange—namely, that of following the world's silver market very slowly and at a long distance and holding exchange as low as possible with a view of protecting trade. It is rather peculiar that while the situation is thus in hand in Hongkong the demand for silver in Shanghai is so great that it is now thought the 2,000,000 ounces coming from the United States to that port will not relieve it. The same amount which is en route to Hongkong is expected to remove any possibility of trouble here. It is to be noted as a curious course of things that while \$17,500,000 gold worth of silver is en route to Hongkong from the United States for shipment to India, there is now arriving at this port about \$2,500,000 gold in gold from India for the United States.

Hongkong brokers report an extraordinary amount of trading in local shares between Hongkong and Shanghai in the past month, as a result of which a large trade balance stands against Hongkong and in favor of Shanghai. This has had a very marked effect upon some lines of local finance and has affected the silver relations of North and South China very materially.

SILVER EXCHANGE.

[From the Commercial and Financial Chronicle, New York, Sept. 28, 1918.]

The exchanges in China, which are now unable to secure remittances of silver (owing, it is said, to the refusal of the United States authorities to grant licenses), are exceedingly firm.

The Shanghai exchange has been dealt in at 5s. 3d., a rate actually 6d. above the parity of the American price of silver.

SMALL-VALUE PAPER CURRENCY IN FAR EAST.

[Consul General George E. Anderson, Hongkong, Nov. 16, in Commerce Reports Jan. 12, 1918.]

With a monetary circulation in silver or in paper currency based upon silver, Hongkong and its South China business field are having less local trouble at the present time with their currency than countries in the Far East whose money is based upon gold. After all the ups and downs and the retirement of large quantities of

subsidiary coins to place Hongkong's currency on an equality with its various elements [see Commerce Reports for Nov. 20, 1917], the present peaceful course of its monetary affairs seems remarkable.

At present subsidiary coins are in circulation in the colony substantially on a par with the standard silver dollar. By reason of the prohibition of the export of silver from the colony, the Hongkong paper dollar is in circulation at a discount compared with silver in the South China Provinces, but this is due to the fact that so long as the export of silver is prohibited the paper dollar is not convertible into the silver it represents except in Hongkong. In a general way the value of Hongkong and South China currency in gold goes up and down with the course of the silver market; but its various elements remain in the same relation to each other, and there has been no trouble with the hoarding of silver coin of any sort.

Other countries in the Far East have had great difficulty by reason of the fact that the high price of silver has carried the value of their subsidiary and other silver coins higher than the gold value of these coins. The result has been that even where there has been a prohibition of the export of such coins they have disappeared from circulation, either being melted for sale as bullion or for use in the arts or simply hoarded. The situation has become so embarrassing that all gold-standard countries in the East have been compelled to adopt paper currency for subsidiary circulation. In the Philippines paper currency has been issued by the Philippine National Bank in denominations of 50 centavos (\$0.25 U. S. gold) to the amount of 1,000,000 pesos (\$500,000 gold), in two issues of 500,000 pesos each, and the government of the island territory is seeking an appropriation for the establishment of a mint and authority to issue small-denomination notes on its own account. The notes issued by the bank are secured by deposits of gold coin with the Territorial Government.

It is generally understood that the Philippine Legislature during its current session will pass legislation reducing the amount of silver in Philippine coins to the amount of the metal placed in corresponding coins of the United States. This will tend to reduce embarrassment in the future from extraordinary rises in the value of silver.

In Japan, according to a newspaper announcement, paper currency is being issued in denominations of 50, 20, and 10 sen (respectively \$0.25, \$0.10, and \$0.05 U. S. gold). Japanese newspapers announce that this paper currency will be issued to the amount of 30,000,000 yen (\$15,000,000 gold) during the current fiscal year in three installments. The government of Singapore, Straits Settlements, where fixed exchange for silver currency is in operation, has also been compelled to issue paper currency in denominations of 10 cents and 25 cents local currency or about \$0.055 and \$0.135 United States gold.

A considerable number of small-value notes has been issued by the government of the Province of Kwangsi in China to meet the shortage of silver felt all over provincial China and also as a matter of loan. The notes are bought and sold as silver certificates in Hongkong by money changers at a discount of about 20 per cent. They represent a partial effort of the authorities to replace silver currency sent to Shanghai at the beginning of the movement of silver abroad and for investment in gold securities and for speculation.

SOUTH CHINA CURRENCY FLUCTUATIONS.

[Consul General George E. Anderson, Hongkong, Sept. 11, in Commerce Reports, Nov. 6, 1918.]

About a year ago, because of the prohibition of the export of silver from Hongkong, the paper bank currency of the colony was circulating at a slight discount in South China, since it could be redeemed in silver only in the colony of Hongkong and for silver which could not be exported from the colony. At that time Chinese currency notes were circulating in South China substantially at par. As a result of the political troubles in China, however, the branch of the Bank of China through which such notes were manipulated has been closed, and the Chinese notes have been decreasing in current value until they reached a value of only 77.5 per cent of their face. There is now some prospect of a reopening of the bank and of the rehabilitation of the currency, and the notes have appreciated in value until they are quoted at present at 81 per cent of their face value. The effect of so great a fluctuation in the value of currency on trade in South China can well be imagined.

In Hongkong gold coin now ranges at a premium of 35 to 45 per cent over corresponding paper currency or bank exchange; i. e., American gold coin to the value of \$100 will exchange at money changers for \$135 to \$145 in American paper currency or in exchange on American banks. It should be noted that the American or other foreign paper currency is not at a discount, but that the gold coin is at a premium. The gold is wanted mainly for industrial purposes and hoarding. The natives in the East Indies and India and, to a large extent, in the Philippines are using more and more currency for jewelry, mounting the coins themselves as pendants, brooches, or similar decorations.

SHANGHAI.

SCARCITY AND HIGH PRICE OF SILVER.

[From Supplement to Commerce Reports, July 18, 1918.]

While silver rose in 1916 to a then unprecedented level, it attained a point almost incredible in 1917, being higher than the average rate ruling in 1885, when the prices of domestic commodities in Shanghai were only about one-third of the prices of to-day.

The opening rate of exchange for 1917 was \$81.75 United States currency for 100 Shanghai aels, and the closing rate was \$102.25. The highest point reached was \$116 in September.

Gold imports into Shanghai, practically all from Japan, amounted to \$12,958,990, as against \$16,204,371 in 1916; exports decreased from \$6,080,271 in 1916 to \$3,698,308 in 1917. Silver imports were \$18,904,597 (chiefly from America, Japan, and Hongkong), as against \$6,138,115 in 1916; exports were \$42,783,071, as against \$37,432,189 the year previous.

The outstanding feature of the year was the increasing prominence of Japanese in all classes of business; new Japanese banks opened branches here and were keen buyers of export bills, for which the rates were cut to such an extent that at times competition with them by the other banks was impossible. In this connection it may be stated that the International Banking Corporation (head office, 55 Wall Street, New York) has been established in China for several years and transacts all kinds of banking and exchange business.

The scarcity of silver has been the subject of negotiations between the Chinese General Chamber of Commerce and the Shanghai General Chamber of Commerce (international). The foreign banks were of the opinion that there need be no anxiety, as the local holdings of silver on February 13, 1917, were 22,000,000 taels and \$15,000,000 Mexican, and assured the native merchants that nothing will be done that will injure the local money market; and that no efflux of silver from China will take place if the Chinese themselves will refrain from gambling on exchange.

New coins of 50, 20, and 10 cent denominations were reported to have been put into circulation during the year, and they were to be accepted by all Government offices at their full value, no discount being allowed. They were to be distributed through the Bank of China for circulation in Chihli, Shantung, and Honan, but should be accepted anywhere in China. They were, however, not seen to any extent in Shanghai, and it is doubtful whether the local exchange shops would accept them, as it would practically do away with their means of livelihood. In this connection it may be stated that for one Mexican dollar the exchange is generally 112 to 114 cents small coin in Shanghai.

A petition was submitted to the taoyin of Shanghai and the special envoy for foreign affairs in May requesting that an embargo be placed on the export of silver, as the continual outward shipment of silver seriously affected the tea and silk trades. It also requested that the mint at Nanking should turn out more silver dollars, and suggested that at least \$4,200,000 should be turned out at once, monthly, so that by the beginning of July the merchants would have enough silver to make their purchases of silk and tea.

STOCK OF SILVER IN SHANGHAI.

[From bullion letter of Samuel Montagu & Co., London, Jan. 9, 1919.]

The stock in Shanghai on December 28 consisted of about 20,700,000 ounces in sycee and \$12,100,000.

SILVER HOLDINGS AT SHANGHAI.

[Explanatory note.]

[From the annual bullion letter of Samuel Montagu & Co., London, 1913.]

The great bulk of the holdings is always in the form of sycee, small shoe-shaped ingots of between 50 and 60 ounces in weight. Silver passes current as money in this form throughout the greater part of China, and having been prepared for this purpose at some cost ranks naturally at a higher value than silver in the form of large bars, as imported into that country.

SWATOW.

FINANCIAL CONDITIONS.

[By Consul Myrl S. Myers, May 14, in Supplement to Commerce Reports, July 31, 1918.]

The trade of Swatow for 1917 was more than 6,500,000 haikwan taels less than that of the year previous and in fact reached the lowest figure since 1913. This loss was

due to a number of causes, both local and foreign, the chief among which, however, was political disturbances.

A still further decline occurred in the remittances from Chinese emigrants in Siam and Straits Settlements, due principally to the increased value of silver. This is a serious loss to this region, as these remittances represent a fair portion of the ready money available for the purchase of imports. They are handled by money-packet honghs which send drafts on Hongkong banks to their agents at Swatow, where they are disposed of to the local banks for Mexican dollars. It is estimated that the amount of these remittances has been reduced at least by half since the beginning of the war.

The embargo on silver from Hongkong exchange continued against that port throughout the year, the Hongkong dollar ranging between 5 and 10 per cent discount as compared to the Mexican dollar. The Shanghai dollar was generally at a slight premium.

SOUTH MANCHURIA.

THE GOLD STANDARD IN MANCHURIA.

[Commercial Agent A. W. Ferrin, Peking, China, Dec. 15, 1917, in Commerce Reports, Jan. 29, 1918.]

By the agreement between the Yokohama Specie Bank and the Bank of Chosen, which became effective December 1, Bank of Chosen gold notes are being paid out in exchange for the silver notes formerly issued by the Yokohama Specie Bank, and the Bank of Chosen is replacing the Yokohama Specie Bank as the central financing institution of South Manchuria. Most of the Yokohama Specie branches have already been taken over by the Bank of Chosen.

While it has not been officially announced that the Japanese Government of the leased territory of Kwantung (which is supreme along the line of the South Manchuria Railway) intends to put Manchuria on a gold basis, the quotation of silver exchange was officially abolished in Dairen December 1. This proclamation, however, had to be rescinded because of the practically unanimous opposition of the Chinese merchants there. The Dairen Chamber of Commerce has indorsed the gold standard, but with the stipulation that it shall be everywhere adopted at the same time and not tried out first in Dairen alone.

STATEMENT OF THE BANK OF CHOSEN.

[From the Bankers' Magazine, New York, May, 1919.]

On December 31, 1918, the Bank of Chosen reported: Bank notes issued, yen 115,523,670.90; secured by yen 47,921,341.96 specie and yen 67,602,328.94 securities.

DECREASED GOLD PRODUCTION IN CHOSEN.

[Excerpt from Seoul Press transmitted by Consul General Ransford S. Miller, Seoul, in Commerce Reports, Aug. 21, 1918.]

The output of gold from mines in Chosen is steadily on the decrease since last year. The decrease is more marked this year, the total output obtained during the first six months being only 3,200,000 yen (\$1,593,000), or a decrease of 600,000 yen as compared with the first half of last year. It may seem that the rate of decrease is not very big, but the fact is that it is witnessed principally with regard to the output from mines managed by Japanese and Koreans, as big mines managed by foreigners, such as the Unsan, Suan, and Chiksan mines, are maintaining their usual rate. The output of gold from the Unsan, Suan, and Chiksan mines accounts for 60 per cent of the total output throughout the peninsula. This means that the gold from these three mines during the first six months of last year amounted in value to 2,280,000 yen, and that from mines managed by Japanese and Koreans to 1,500,000 yen. Consequently a decrease of 600,000 yen on 1,500,000 yen is by no means small.

This decrease may be accounted for by the abnormal rise in the price of chemicals and materials necessary for carrying out mining undertakings, including dynamite, quicksilver, etc., and by the dearth of hands due to the prosperous condition of commerce and industry in the peninsula; also by the rise in wages. In spite of the great increase in expenditure, the price of gold maintains the same level as that for many years past, viz, 5 yen (\$2.50) a momme (0.12057 ounce), and this has made it impossible for owners of small mines to carry on the undertaking with profit, resulting in the closing down of no small number of mines. The Kuhara and Fujita firms have, however, been buying gold ore and exporting it to Japan. Taking this into account, it may be that the output of gold has not decreased so much as it appears, but at any rate gold refined in Chosen has remarkably decreased. It is thought that, unless the price of commodities, as well as wages, drops considerably, gold mining in Chosen will not recover its former prosperous condition.

DUTCH EAST INDIES.

EXPORT OF GOLD AND SILVER.

[By Consul H. J. Dickinson, Batavia, Java, Apr. 16, in Supplement to Commerce Reports, Aug. 17, 1918.]

During the year 1917 the Dutch East Indies exported to the United States 20 tons of gold and silver concentrates, valued at \$18,314, and 90 cases of gold and silver precipitates valued at \$244,408.

COMPARATIVE STATEMENT OF THE BANK OF TAIWAN.

[From the Bankers' Magazine, London, Aug., 1919, p. 191.]

This bank was incorporated in 1897 under Japanese Government auspices for the promotion of trade and industry in Taiwan. It has power to issue its own notes in Formosa. At December 31 last the amount of notes in circulation was £4,210,811. The remarkable growth in the resources of the bank, more particularly within the last three years, may be seen from the following summary:

Items.	Dec. 31, 1914.	Dec. 31, 1915.	Dec. 31, 1916.	Dec. 31, 1917.	Dec. 31, 1918.

The convertible notes represent those of the Bank of Japan, the Bank of Chosen, and the Bank of Taiwan (excluding, with respect of the convertible notes of the Bank of Japan, the reserve for the paper currency or subsidiary coins, and excluding the convertible reserve notes of the Bank of Chosen).

In addition to the figures given here, there is in circulation currency of the former government of Korea to the value of 1,300,000 yen (\$648,050), all of which with the exception of 5,000 yen (\$2,493) is silver currency.

LAWS AFFECTING THE CURRENCY.

The fundamental coinage law, which became effective October 1, 1897, published in Report of the Director of the Mint for 1897, page 353, has been amended by reducing weight and fineness of silver coins, viz:

The following revision is made to the coinage law, by law No. 42, of 1918:

Article 5, heading 2, silver coins, shall read (fineness):

50-sen pieces, 800 parts pure silver, 200 parts copper.

20-sen pieces, 720 parts pure silver, 280 parts copper.

10-sen pieces, 720 parts pure silver, 280 parts copper.

Article 6, headings 4 to 6, shall read (weight):

50-sen pieces, 1.8 mommes=6.75 grams=104.1725 grains.

20-sen pieces, 0.8 momme=3.00 grams=46.2989 grains.

10-sen pieces, 0.4 momme=1.50 grams=23.1494 grains.

Article 10, heading 2, shall read (weight tolerance):

50-sen pieces, per piece, 0.0018 momme; per 1,000, 0.9.

20-sen pieces, per piece, 0.0012 momme; per 1,000, 0.6.

10-sen pieces, per piece, 0.0008 momme; per 1,000, 0.4.

This law shall go into effect the day of its promulgation (May 1, 1918).

Silver coins issued previously shall pass as before.

The currency issued and put into circulation in accordance with the regulation of the former government of Korea shall remain in circulation as heretofore until December 31, 1920.

The Government will exchange the currency mentioned in the preceding paragraph for current coins within five years after the termination of the period of validity.

Yosen (a kind of currency) shall continue to circulate in Korea for the time being.

This law shall take effect from the date of its publication (Apr. 1, 1918).

PAPER NOTES OF SMALL DENOMINATION.

[Financial and Economic Annual of Japan, 1918.]

In order to make up the deficiency of subsidiary silver coins caused by the war, paper notes of small denominations, viz, 50-sen, 20-sen, and 10-sen, were issued as substitute for them in accordance with imperial ordinance No. 202, promulgated on the 29th of October, 1917. The total issue of these small notes amounted to 65,689,000 yen (\$32,739,398) at the end of August, 1918, of which yen 46,300,000 (\$23,075,920) represents the amount of the 50-sen notes, yen 8,997,000 (\$4,484,105) the 20-sen notes, and yen 10,392,000 (\$5,179,373) the 10-sen notes.

NOTE.—The metallic stock in the above tables does not show adequately the firm financial position of Japan. Her foreign bills (credit abroad) in January, 1918, amounted to 198,000,000 yen; the same item in December, 1918, amounted to 459,000,000 yen. Her loans to England and Japan during the year 1918 were considerably increased.

THE MONETARY SITUATION IN JAPAN.

[Notes from Japan Gazette and Japan Chronicle, transmitted by Consul General George H. Seidmore, Yokohama, January, 1919, in Commerce Reports, Mar. 12, 1919.]

Returns issued by the Central Treasury show that on December 26, 1918, Japan's specie at home and abroad stood at 1,598,000,000 yen (\$796,603,000), being an increase of 4,000,000 yen (\$1,994,000) as compared with December 15. Of this total, 453,000,000 yen (\$225,820,500) is in Japan and the remainder deposited in London, New York, and Paris. The following figures show the amount of the country's specie at the end of each year since 1914:

Year.	Yen.	
.....	341,119,000	(\$170,047,821)
1914.....	516,082,000	(\$257,266,877)
1915.....	714,444,000	(\$356,150,334)
1916.....	1,104,837,000	(\$550,761,244)
1917.....	1,598,000,000	(\$796,603,000)
1918.....		

There has been a continued increase in the issue of Bank of Japan notes. This tendency has become more pronounced with the approach of the year end. The continued large advances to the exchange banks now amount to about 380,900,000 yen (\$189,430,000), while there has been increased accommodation to ordinary banks.

According to the balances at the Bank of Japan, brought forward from December 26 to 27, the issue of notes totaled 1,020,403,000 yen (\$508,670,895), showing an increase of 21,500,000 yen (\$10,717,750) over the previous day. This is the first time that the note issue has ever reached the 1,000,000,000-yen (\$498,500,000) level. It is said that at the end of 1918 the figure will further increase to about 1,100,000,000 yen (\$548,350,000). The following figures show the note issue at the end of each of the last four years:

Year.	Yen.	
1914.....	385,589,000	(\$192,216,117)
1915.....	430,138,000	(\$214,423,793)
1916.....	601,224,000	(\$299,710,164)
1917.....	831,371,000	(\$414,438,443)
1918 (Dec. 26).....	1,020,403,000	(\$508,670,895)

GOLD AND SILVER PRODUCTION IN 1918.

[The Mining Journal, May 31, 1919.]

An official estimate of the output of Japan during 1918 is as follows. Figures for 1917 are given by way of comparison:

	1918.	1917.
Gold.....crude ounces..	236,289	227,524
Silver.....do.....	5,967,026	7,111,720

EFFECT OF DECREASE IN GOLD OUTPUT.

[Commerce Reports, Jan. 22, 1919.]

There has been a falling off in the output of gold in Japan and Korea, and as it is believed that foreign countries will not remove the embargo on the export of gold immediately on the conclusion of peace, the Japanese Government is considering the steps to be taken to meet the situation. In this connection Mr. Kamino, the vice minister of finance, says:

"There has hitherto been much discussion among scholars and statesmen as to the advisability of including the specie held abroad in the amount of gold reserve against the note issue, as is now done. I understand that the matter is engaging the attention of the Tokyo Chamber of Commerce. Of the total amount of specie held by the Government and the Bank of Japan, amounting to 1,505,000,000 yen (\$749,490,000), the amount held at home amounts to no more than 455,000,000 yen, the remaining 1,050,000,000 yen being held in England and the United States in about equal proportions. If these two countries permit the export of gold, it will be easy to keep the whole gold reserve at home, but there is considerable doubt whether our desire in this respect can be realized after the war. It took France about 30 years to restore the conversion of bank notes after the Napoleonic wars. In this war all the belligerents have expended unprecedentedly large amounts and must experience much difficulty in making good these encroachments on their treasuries. It is thought that foreign countries will not remove the embargo on the export of gold in less than 10 years after the conclusion of the war. With this fact in mind we are considering all questions regarding gold.

"The present output of gold in Japan, including that in Formosa and Korea, amounts to no more than 20,000,000 yen (\$9,960,000) a year. The market value of this metal has increased, yet gold mining is far less profitable than other mining industries, and this accounts for the fact that the output has been declining. The domestic demand for gold is usually from 3,000,000 yen to 5,000,000 yen a year, the greater portion of the production being bought by the Bank of Japan. It has recently become very difficult for the bank to buy the metal in this country, because sales on the open market bring better prices in view of the increased demand among people whose incomes have considerably increased owing to the war. Thus the present total demand amounts to about 30,000,000 yen (\$14,940,000), exceeding the domestic supply by about 10,000,000 yen. This shortage the Bank of Japan and the Yokohama Specie Bank have been trying to make good by selling foreign gold coin in their possession, but this sort of makeshift can not go on for any great length of time.

The Government is accordingly considering these two proposals: (1) Restricting the annual total consumption of gold among the people to 15,000,000 yen (\$7,470,000) or 17,000,000 yen (\$8,466,000), and (2) restricting the quality of gold used to 14 or 16 carats. As to the first proposal, the restriction will naturally have to be adopted if there is no increase in the output. The other proposal, however, will be very difficult

of adoption. Those who advocate it declare that Germany has restricted the quality to 14 carats, but according to investigations made by our authorities this is not true; on the contrary, it has been discovered that Germany has prohibited the production of gold of less than 9 carats. In England there are private assay offices which put their stamps on the metals tested, but there is some doubt as to whether this method is advisable and whether it can be copied in Japan. In any case it seems very difficult at present to adopt any measures imposing restrictions on the quality of gold used. The Government is of opinion that the only practicable measure in the present circumstances is to take special steps to increase the output on the one hand and to economize consumption on the other, with a view to making Japan able to meet her requirements by her own output. I admit, however, that the question is full of difficulties."

JAPANESE COMMERCIAL ACTIVITIES.

[Excerpts from the Japan Chronicle, transmitted by Consul General George H. Scidmore, Yokohama, Nov. 25, 1918.]

GOLD ACCUMULATIONS.

The latest official returns show that on September 14 the total of Japan's gold specie amounted to 1,321,000,000 yen (the normal value of the yen is \$0.498). This is the largest amount on record, showing an increase of 78,000,000 yen over the figures for August 30. The principal reason for this great increase is that the Government used the greater portion of the proceeds from the issue of extraordinary exchequer bonds for 100,000,000 yen in August to purchase specie held abroad by exchange banks in order to enable the latter to secure supplies of working funds. The latest increase in the amount of specie in the possession of the Government and the Bank of Japan has occurred in the portion held abroad.

COMMERCIAL REACTIONS.

After the summer slackness it is usual for trade and commerce to show revived activity at this time of the year, but this year no appreciable activity has set in. Internal disturbances in China and other countries, coupled with the advance in prices in Japan, have gone toward reducing exports from this country. There is some activity in exports to South America and South Africa, but the trade is not of any large magnitude, and moreover is not so active as it was at this time last year. There has been increasing advocacy of the regulation of prices, and the raising of the Bank of Japan rate has been followed by the announcement of the creation of a committee for the regulation of prices and the flotation of a considerable domestic loan. These measures are taken as signs of the Government being bent upon taking a negative financial policy. The Austrian peace overtures have produced a further depressing effect on the commercial markets, of which the markets for iron and steel and chemicals and medicines, which have been very strong for a long time past, are distinctly weak.

JAPANESE AND RUSSIAN OUTSTANDING ACCOUNTS.

Of the Japanese accounts outstanding on goods sold to Russia, the Government has decided to reimburse the creditors temporarily on behalf of the Russian Government to the extent of about 80,000,000 yen (\$39,840,000). As the first installment of this amount the Government recently issued extraordinary exchequer bonds for 36,000,000 yen (\$17,928,000) to enable the creditors to secure financial accommodation to that extent. The Government, however, is not in a position to adopt similar measures with regard to the accounts on goods supplied to Russian individuals or companies. Some time ago a number of Japanese creditors established a Russo-Japanese trading company with a capital of 1,000,000 yen (\$498,000) with the object of protecting their private credit to the Russians, which credit totals about 30,000,000 yen (\$14,940,000). Since the operations of a company capitalized at only 1,000,000 yen (\$498,000) are necessarily limited, it has now been decided, with the approval of the finance department, to establish a Russo-Japanese industrial joint stock company with a capital of 20,000,000 yen (\$9,960,000), with the interests of the Bank of Korea (a semiofficial institution that has been noticeably extending its operations in Siberia) as its nucleus, the shareholders including the Okura, Mitsui, Takata, and other prominent companies and merchants having Russian credit in their favor. Shareholders are to submit to the company all documents and other proofs of their Russian credits, in return for which the company will advance money to the extent of half the stated amount of credit. The company will receive financial assistance from the Japanese Govern-

ment at the low rate of about 4 per cent. The extent of this assistance is not definitely known until all the Russian credits of shareholders are examined, but it is expected to amount to about 10,000,000 yen (\$4,980,000). This amount either will be procured by the issue of extraordinary exchequer bonds or will be advanced by the deposit bureau in the finance department. It is reported that the object of the proposed company is not only to protect the credits of the Japanese merchants concerned, but also to make joint efforts for the further extension of Japanese trade with Russia.

MONETARY SYSTEM—EXCHANGE RATES.

[Consul Ralph H. Bader, Teheran, in Supplement to Commerce Reports, Dec. 2, 1918.]

Persia has nominally a double monetary standard, but, as a matter of fact, the finances of the country are on a silver basis. The Persian monetary unit is the kran, consisting of 20 shahis. The silver pieces minted are 5 krans, 2 krans, 1 kran, 10 shahis, 5 shahis, and 3 shahis. Nickel 2-shahi and 1-shahi pieces are also coined. The gold coins are the ashrafi (10 krans), penzhazari (5 krans), and the dohazari (2 krans). The gold coin is a commodity only and is used for presents and hoarding; it is bought and sold on the market, and its price fluctuates according to demand. Ordinarily the gold kran is worth just twice the value of the silver kran; e. g., a 5-kran gold piece was worth 1 toman (10 krans) and the ashrafi was worth 20 krans (2 tomans) silver. The value of the gold kran fluctuates almost daily.

In normal times the exchange value of the kran is \$0.0875, against the abnormal rate of \$0.179 in March, 1918. The rise in the value of the kran is due to conditions resulting from the war, such as rise in the price of silver, presence of much foreign money, and the immense decrease in the volume of business with foreign countries. The usual interest rate in Teheran of 12 per cent has been increased to 18 per cent and 24 per cent. Even at these enormous rates little money is obtainable. Practically no credit is being extended by foreign firms operating here.

CIRCULATION OF BROKEN AND PERFORATED COINS.

[Minister John S. Caldwell, Teheran.]

By decree of August 7, 1918, all money changers and tradesmen must henceforth accept 2-kran, 1-kran, 10-shahi, and 5-shahi broken and perforated coins.

EXCHANGE AND RESERVES.

[Vice Consul Carl C. Hanson, Bangkok, in Supplement to Commerce Reports, Dec. 27, 1918.]

The local exchange quotations for the Siamese silver tical at Bangkok on August 12, 1918, were: On New York bank bills, demand U. S. gold 0.36; on London, 16½; and on Paris, 2.05. The equivalent of exchange demand London in Siamese currency: £1=13.08 ticals. The value of Siamese currency notes in circulation up to July 31, 1918, was 63,976,395 ticals (\$23,671,266) and the reserves at the same date amounted to 17,524,686 ticals (\$6,484,134) in coin and 46,451,708 ticals (\$17,187,132) in investments.

The gold standard reserve fund for the maintenance of exchange amounted to £1,222,147 (\$5,947,578) up to June 30, 1918.

The actual currency of the country is Straits Settlements dollars and 50-cent pieces or half dollars. Sovereigns are legal tender at the rate of £7 (\$34.07 U. S.) for 60 Straits Settlements dollars (\$34.07 U. S.), but gold not in actual use as current coin. Sovereigns are at a premium for use as ornaments, the present premium (June, 1919) being about 33 per cent.

LAWS AFFECTING THE CURRENCY.

By royal decree of May, 18, 1918, the Straits Settlements coinage order of 1907 was further amended, making the fineness of the Straits Settlements silver dollars and half dollars 600 instead of 900, and the tolerance 0.005 instead of 0.003.

¹ A large quantity of coined gold is hoarded in the country, but it has disappeared from active circulation.

² This figure represents the issues, but most of the silver has disappeared from active circulation.

LAWS AFFECTING THE CURRENCY.

By military proclamation of February 21, 1918, the import of gold coin or bullion into Egypt was prohibited save under license.

By law No. 13 of June 15, 1918, and order of the minister of finance of same date, authority was given to issue Government currency notes of 10-piaster denomination.

By law No. 14 of July 18, 1918, and ministerial order of same date, authority was given to issue Government currency notes of 5 piasters.

By the coinage ordinance of February 11, 1918, it was established as follows:

1. The Egyptian coinage of gold, silver, nickel, and bronze, described in articles 1 to 10, inclusive, of the decree of his highness the Sultan of Egypt, entitled "Law No. 25 of 1916," and in the second of the two orders made by the Egyptian minister of finance and dated the 18th of October, 1916, shall be legal tender in the Sudan.

2. The British sovereign shall be legal tender in the Sudan at such rate and subject to such conditions as the financial secretary, with the consent of the governor general in council, may order.

3. The Egyptian silver, nickel, and bronze coins of the old issues minted under the decrees of the Egyptian Government dated November 14, 1885, and November 13,

1887, shall continue to be legal tender in the Sudan until withdrawn from circulation by order of the governor general in council after such a period of notice as may be specified in such order.

4. The English and Australian shillings and florins circulate in the Sudan at the rate of 5 and 10 Turkish piasters, respectively, subject to future withdrawal on order.

GERMAN EAST AFRICA.

GOLD COINS EXECUTED.

[Bankers Magazine, London, July, 1919.]

According to the officer in charge of the National Bank of India branch at Tanga, about 1,200 gold coins, known as the Tabora sovereign, of the nominal value of 15 rupees, but containing only about 10 rupees worth of gold, were struck about 1917 and issued to German residents, partly as mementoes of the war, from gold produced in Sekengi. The coins are of 750 parts gold, instead of 916 parts as contained in the British sovereign and the Indian mohur.

LIBERIA.

MEDIUM OF CIRCULATION.

[From H. F. Worley, Financial Adviser, General Receiver of Customs, January, 1919.]

The principal medium of circulation is British crown and colonial silver currency and paper. The copper coins are principally Liberian, 1-cent and 2-cent pieces. The pound sterling is accepted at \$4.80 regardless of the rate elsewhere. This rate is maintained because the general receiver of customs accepts it on that basis in payment of customs duties.

The United States paper money and fractional currency circulate in a limited degree at par, although the bank of British West Africa accepts the \$5 gold and paper money at \$4.80, the same as the pound sterling.

French silver currency circulates in a limited degree, principally on the Franco-Liberian boundary, and is accepted as 20 cents for the franc.

Liberian silver and copper coins circulate at the same rate as United States currency, although the Bank of British West Africa discounts it the same as United States currency—24 cents for the quarter and 2 shillings for the 50-cent piece. It is stated that Liberia never had more than \$15,000 in her own currency, much of which has now disappeared.

A considerable percentage of the gold and silver currency is used by goldsmiths and silversmiths in their work.

MADAGASCAR (FRENCH EAST AFRICA).

EXPORT OF GOLD.

[Consul James G. Carter, Tananarivo, in Supplement to Commerce Reports, May 16, 1919.]

The gold dust export for the calendar year 1917 was 29,610 ounces, valued at 2,763,877 francs (\$533,428), as compared with 46,618 ounces, valued at 4,350,875 francs (\$839,719) the previous year.

SOUTH AFRICA.

There is no mint in the Union of South Africa.

The amount of gold and silver coin withdrawn from monetary use during the year ended December 31, 1918, is unknown.

No data available on the quantity of gold and silver used in the industrial arts during the calendar year 1918.

THE MINING INDUSTRY.

[Vice Consul Samuel W. Honaker, Johannesburg, in Supplement to Commerce Reports, Dec. 18, 1918.]

This consular district is noted for the abundance and variety of its mineral resources. Besides being the world's greatest gold-producing country, it possesses antimony, asbestos, coal, cobalt, copper, corundum, diamond, lead, magnesite, silver, tin, and other deposits, and mining is therefore the paramount industry.

The importance of the gold-mining industry to the whole of South Africa can hardly be overemphasized. Every branch of productive enterprise is closely related to it, a high percentage of the entire population is directly or indirectly dependent upon it, and it creates demands which are felt abroad as well as within the country. It makes large purchases of supplies and distributes lucrative dividends to domestic and foreign shareholders. Practically all of the wages and salaries paid out are spent or invested locally.

Although gold is found in other districts of the Transvaal—for instance, in the Barberton, Klerksdorp, Potchefstroom, Venterskroon, and other areas—the principal bearing reefs are along the Rand. The reef, continuously traced, measures about 62 miles, and runs east and west. The gold is found in minute particles and in the richest ores, but rarely in visible quantities before treatment. On some of the mines shafts are sunk to depths ranging from 3,000 to 5,500 feet.

During 1917 the output of gold in the Union of South Africa amounted to 9,019,389 fine ounces, with a value of \$186,424,296. Of this, the Transvaal alone contributed 9,018,082 fine ounces, worth \$186,414,110, or \$10,186 less than the total. As compared with the preceding year, the return of this Province decreased by 277,456 fine ounces, which in monetary terms is equivalent to \$5,738,183. The Transvaal's importance as a gold-producing center is shown by its total production, which since 1884 has amounted to 130,227,748 fine ounces, with a valuation of \$2,686,350,041.

The amount of ore milled on the Witwatersrand during 1917 was 27,251,960 tons, a decrease of 1,273,292 tons compared with the crushing of 1916. There were 29,545,949 tons of ore hoisted and taken from surface dumps, as contrasted with 31,312,572 tons for the preceding year. The actual number of rock drills in commission was 9,993, and of this number the average in operation was 9,029.

MONETARY SITUATION.

[Vice Consul Chas. H. Heisler, Capetown, in Supplement to Commerce Reports, Feb. 28, 1919.]

The total of the notes in circulation on December 31, 1917, was \$22,671,000, an increase of almost \$6,000,000 over 1916. The present circulation is approximately double that of the prewar period, but even now there is probably a larger proportion of gold in circulation in South Africa than in any other British territory.

The total amount of coin held by the South African banks at the end of 1917 was \$42,244,000, as compared with \$32,896,000 at the close of the previous year.

SPANISH MOROCCO.

NEW BANK NOTES.

[Consul General Carl Bailey Hurst, Barcelona, Spain, Feb. 11, in Commerce Reports, Apr. 9, 1918.]

In order to facilitate small payments, a new issue of bank notes has been put into circulation in Spanish Morocco, having a value of 20 pesetas each, about \$3.60. This paper money bears the inscription of its value in the Spanish and French languages on one side and in Arabic on the other, the bill being about the size of the 100-peseta bill current in the Peninsula.

NOTE CIRCULATION.

[From Commerce Reports, Mar. 2, 1918.]

Having decided at the outbreak of the war to change the currency by withdrawing practically the entire gold issue from circulation and issuing paper money, the Federal Government has proceeded with that policy without wavering. The face value of the paper notes now in circulation is \$229,345,852. The authorities appear to feel, however, that the margin of safety has been nearly reached, and they have been withdrawing a quantity of the notes from circulation. The amount of gold coin held by the treasurer as a guaranty of the stability of the note issue is now \$74,954,139, representing 32.68 per cent of the notes in circulation. The result of a large increase of the paper currency is seen in a very general diffusion of money among the people.

NEW ZEALAND.

The production of gold and silver during the year ended December 31, 1917, was estimated at £922,309 (\$4,488,417).

NOTE.—The bullion is shipped to England for refinement; separate values of gold and silver can not be stated.

Gold is the normal standard, but as a temporary war measure, inconvertible legal tender bank notes are used.

LAWS AFFECTING THE CURRENCY.

By law No. 7 of 1916, the governor in council was authorized to make from time to time regulations for the following purposes:

(a) For suspending, altering, or varying the terms, conditions, or restrictions relating to the issue of notes by any bank, and the making of such notes legal tender within New Zealand.

(b) For altering the amount of the reserve of coin, bullion, and public securities required to be held in New Zealand by any bank against the debts, engagements, and liabilities of such bank.

(c) Providing that bank notes of the denomination of 10 shillings may be issued within New Zealand.

By law No. 4 of 1918, paragraph (c) above was amended as follows: Providing that bank notes of the denominations of 10 shillings or 5 shillings may be issued within New Zealand.

FINANCIAL CONDITIONS IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, in Commerce Reports, June 19, 1919.]

The bank statement given out at the end of December, 1918, showed circulation, \$32,905,837, a gain of \$1,445,399. The coin and bullion account showed a loss of \$2,719,016, and amounted to \$45,913,882.

¹ At average United States equivalent value of a fine ounce of silver in London, \$0.89525 in 1917, and at average price of a fine ounce of silver in New York, \$0.98446 in 1918.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1916, 1917, AND 1918.

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coin as is owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted to bullion.

It is probable that an estimate of \$9,000,000,000 as the world's gold monetary stock would be conservative.

Monetary stocks of the principal countries of the world.

¹ Gold and silver certificates not included, as they represent those metals, dollar for dollar.

² State bank figures only.

³ Reported as cash, bullion, and foreign money.
⁴ Partial returns only.

NOTE.—Figures given represent each country's stock at the end of the year, except where otherwise indicated. Population figures are from the Statistical Abstract of the United States, 1917. Blanks indicate no figures available rather than no stock. Practically no gold was reported as in actual circulation. Gold held abroad, as follows, not included in above figures: France, \$326,765,932; Russia, \$1,046,978,810.

Monetary stocks of the principal countries of the world—Continued.

END OF CALENDAR YEAR 1917.

REPORT OF THE DIRECTOR OF THE MINT.

Production of gold and silver in the world since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
